37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that

is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain "verifiable parental consent" from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a

valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental

health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff J.R. is a sixteen-year-old girl who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). J.R.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to J.R. 24 hours a day, J.R. began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to J.R., a minor user of the Meta platform(s), J.R. subsequently developed injuries including, but not limited to, multiple periods of suicidal ideation, anxiety, headaches, fatigue, ADHD, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Virginia Roth from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Virginia Roth.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Virginia Roth nor J.R. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when J.R. began to use the products.

70. Defendants not only failed to warn J.R. and Virginia Roth of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of J.R.'s extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;

- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

27

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff’s injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products’ design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products’ condition.

98. Plaintiff was injured as a direct and proximate result of the platform’s defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff’s harms.

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS’ concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS’ sole possession and continued to exist through the products’ dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user’s neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third parties. Meta has a “Youth Portal” website that does

not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat,

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff’s respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices (“GMPs”);
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regard to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms’ output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of

viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while,

the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes multiple periods of suicidal ideation, anxiety, headaches, fatigue, ADHD, and a reduced inclination or ability to sleep, among other harmful effects.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
167. Facebook and Instagram are also defective for failing to warn users that:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
  - f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested,

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image, and video content, that is algorithmically sorted to

place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;

- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly

more attractive than the user, and most other people are more successful and/or competent than the user;

- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably

should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes multiple periods of suicidal ideation, anxiety, headaches, fatigue, ADHD, and a reduced inclination or ability to sleep, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

- ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false, and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

237. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one’s comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers’ appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental

and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION**  
**FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

63

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of

the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: multiple periods of suicidal ideation, anxiety, headaches, fatigue, ADHD, and a reduced inclination or ability to sleep.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **ELEVENTH CAUSE OF ACTION CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

280. DEFENDANTS' conspiracy involved:

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

**TWELFTH CAUSE OF ACTION**  
**UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

70

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. 815 ILL. COMP. STAT. ANN. § 505/2 *et seq.* (Consumer Fraud and Deceptive Business Practices Act); and
- b. 815 ILL. COMP. STAT. ANN. § 510/2 *et seq.* (Uniform Deceptive Trade Practices Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were

aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION  
BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

75

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users' mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION  
INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

372. DEFENDANTS’ conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

82

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

84

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, anxiety, headaches, fatigue, ADHD, and a reduced inclination or ability to sleep, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute,

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

87

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such

as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse

(prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;

6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 7, 2022

Respectfully Submitted,

/s/ Peter J. Flowers

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen,

a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Illinois and purposely avail themselves of the benefits of transacting business with Illinois residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Illinois and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Illinois relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Illinois.

18. Defendants advertise extensively in Illinois, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from

providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Illinois for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Illinois-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Illinois residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Northern District of Illinois.

### III. PARTIES

#### **Plaintiff**

21. Plaintiff Diane Williams is an individual residing in Chicago, Illinois, and the grandmother and legal guardian of her thirteen-year-old grandson C.M. Plaintiff brings this suit on behalf of herself and on behalf of C.M., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland);

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011 and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that

is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain "verifiable parental consent" from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a

valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental

health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate

the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff C.M. is a thirteen-year-old boy who has been a heavy user of the Meta platform(s).

testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

## VI. CAUSES OF ACTION

**FIRST CAUSE OF ACTION**  
**STRICT LIABILITY - DESIGN DEFECT**

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;

- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

27

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff’s injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products’ design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products’ condition.

98. Plaintiff was injured as a direct and proximate result of the platform’s defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff’s harms.

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users,

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used or signed up on Facebook and Instagram had he received adequate warnings and instructions that he could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup>

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who

---

<sup>11</sup> Id.

are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION** **STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Illinois. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Illinois.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regard to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of

viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying, and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while,

the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, among other harmful effects.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting, and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

167. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used Facebook and Instagram had he received adequate warnings and instructions that the platforms could cause social media addiction,

depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regard to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested,

marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to

place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;

- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly

more attractive than the user, and most other people are more successful and/or competent than the user;

- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, which may cause or contribute to additional disease.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

221. Meta also omitted to inform users that, as it knew or should have known:

- 55

- ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one’s comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers’ appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false, and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINTH CAUSE OF ACTION**  
**FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

237. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

61

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION**  
**FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

63

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to his detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from him regarding the safety

of the platforms, and not intentionally deceived by DEFENDANTS, he would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Illinois.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

280. DEFENDANTS' conspiracy involved:

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION  
UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position he occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. 815 ILL. COMP. STAT. ANN. § 505/2 *et seq.* (Consumer Fraud and Deceptive Business Practices Act); and
- b. 815 ILL. COMP. STAT. ANN. § 510/2 *et seq.* (Uniform Deceptive Trade Practices Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

75

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram or would not have registered or used on the same terms, had he known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably

careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

84

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes depression, severe anxiety, social media compulsion, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION  
NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute,

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

87

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such

as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse

(prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused his injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused his injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused his injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that he had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;

7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: July 5, 2022

Respectfully Submitted,

/s/ *Peter J. Flowers*

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta

Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the [www.Facebook.com](https://www.Facebook.com) (“Facebook”) and [www.Instagram.com](https://www.Instagram.com) (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world's social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

7. A user's "feed" on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their

products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Illinois and purposely avail themselves of the benefits of transacting business with Illinois residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Illinois and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Illinois relating to use of the products at issue in this case, and interact extensively with—send

19. Defendants have earned millions of dollars in annual revenue from their Illinois-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Illinois residents, including Plaintiff.

### III. PARTIES

21. Plaintiff Brianna Murden is an adult individual residing in Caseyville, Illinois.

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

6

and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed “Meta Quest”). Meta’s subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed

“Meta Quest”), among other technologies related to Meta’s various platforms. Defendant Meta is the sole member of this LLC Defendant.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing. Defendant Meta is the sole member of this LLC Defendant.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011 and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and

adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants’ social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as "likes" it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or "downregulating" the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.

- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain "verifiable parental consent" from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as

Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet's infancy, Meta's algorithms are not based exclusively on user requests or even user inputs. Meta's algorithms combine the user's profile (e.g., the information posted by the user on the platform) and the user's dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about

that user's interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta's key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

polarizing content because it'll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Brianna Murden is a twenty-one-year-old woman who has been a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (*e.g.*, cutting and burning herself), and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the addictive and mentally harmful effects of the Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

77. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

78. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

80. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

82. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;

- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

86. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

87. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their

child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

89. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more

successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff’s injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the products’ design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products’ condition.

97. Plaintiff was injured as a direct and proximate result of the platform’s defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff’s harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
  - b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
  - c. Facebook makes body-image issues worse for one-third of girls;
  - d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.
105. Facebook and Instagram are also defective for failing to warn users that:
- a. Engagement-based ranking and intermittent variable rewards are
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters)
    - i. inflict unrealistic and biased beauty standards upon users,
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and

continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, "Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

---

<sup>11</sup> Id.

118. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a

break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

124. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Illinois. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Illinois.

125. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

129. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regard to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of

viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while,

the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level

access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting, and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
166. Facebook and Instagram are also defective for failing to warn users that:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
  - f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction,

depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

177. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

179. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

182. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regard to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested,

marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to

place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

203. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

205. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;

- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;

- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

212. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

215. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

217. DEFENDANTS were negligent, reckless, and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false, and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

236. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body

dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **TENTH CAUSE OF ACTION FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):

- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

273. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Illinois.

274. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. DEFENDANTS' conspiracy involved:

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION  
UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and

- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's

detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION  
VIOLATION OF UNFAIR TRADE  
PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

298. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

300. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

302. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;

- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

303. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. 815 ILL. COMP. STAT. ANN. § 505/2 *et seq.* (Consumer Fraud and Deceptive Business Practices Act); and
- b. 815 ILL. COMP. STAT. ANN. § 510/2 *et seq.* (Uniform Deceptive Trade Practices Act).

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters, and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or

browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

323. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION**  
**BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

325. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

337. DEFENDANTS' breach of these warranties were a substantial factor in causing Plaintiff's harms.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browwrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

348. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

350. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION  
INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

365. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

366. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

368. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook

and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

370. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

371. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

374. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

376. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

377. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

378. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among

other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

381. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

393. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

394. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

396. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

398. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, body dysmorphia, severe anxiety, multiple periods of suicidal ideation, self-harm (e.g., cutting and burning herself), and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION**  
**MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

410. Facebook and Instagram cause harm by the following product effects:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
  - f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by

suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook

and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

428. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;

11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: July 13, 2022

Respectfully Submitted,

/s/ Peter J. Flowers

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants’ defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants’ products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants’ failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants’ unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants’ products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta’s increasingly detrimental effect on teenagers when Frances Haugen,

a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Kentucky and purposely avail themselves of the benefits of transacting business with Kentucky residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Kentucky and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Kentucky relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Kentucky.

18. Defendants advertise extensively in Kentucky, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are

prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Kentucky for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Kentucky-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Kentucky residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Eastern District of Kentucky.

### III. PARTIES

#### **Plaintiff**

21. Plaintiff Nina White is an adult individual domiciled in Lexington, Fayette County, Kentucky. Lexington, Kentucky, is Plaintiff's true, fixed, and permanent home and principal establishment, and to which Plaintiff has the intention of returning whenever she is absent therefrom. Plaintiff intends to remain in Lexington, Kentucky, indefinitely.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware);

Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms. Defendant Meta is the sole member of this LLC Defendant.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing. Defendant Meta is the sole member of this LLC Defendant.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes

change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants’ social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them

to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.

- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions

that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children—in the face of its conscious, long-standing, plainly deficient age-verification protocols—demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking,

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta's own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user's News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that "[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news," with one data scientist noting that "[t]his is an increasing liability." In other internal memos, Meta concluded that because of the new algorithm, "[m]isinformation, toxicity, and violent content are inordinately prevalent." Other documents show that Meta employees also discussed Meta's motive for changing its algorithm—namely, that users began to interact less with

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today’s youth.<sup>8</sup> Meta’s own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta’s researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that “[w]e make body issues worse for one in three teen girls,” and “[t]eens blame Instagram for increases in the rate of anxiety and depression.” Similarly, in a March 2020 presentation posted to Meta’s internal message board, researchers found that “[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse.” Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of “suicide and self-injury” worse. Seventeen percent of teen-girl Instagram users say the platform makes “[e]ating issues” worse.

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols

apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out

of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

## **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Nina White is an eighteen year old woman who has been a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff developed a compulsion to engage with the Meta Platform(s), and began getting less and less sleep.

65. As a proximate result of her compulsion to interact with the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the addictive and mentally harmful effects of the Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of social media compulsion, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she has developed numerous health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the Complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder,

anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

77. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

78. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

80. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

82. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

86. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

87. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

89. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff's injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

97. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

105. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the

---

<sup>11</sup> Id.

purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

118. Finally, the guide mentions the body image harms social media inflicts, but it solely blames influencers as the cause, rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a

break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION** **STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

124. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Kentucky. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

125. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

129. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;

- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **FOURTH CAUSE OF ACTION** **PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2)

intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction,

depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

166. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,

- ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a

danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION  
PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

177. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

179. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected,

tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

182. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;

- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **SEVENTH CAUSE OF ACTION** **NEGLIGENCE AND/OR GROSS NEGLIGENCE**

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately

harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

203. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

205. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes,"

comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;

- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video

content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising, and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

212. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **EIGHTH CAUSE OF ACTION** **NEGLIGENT MISREPRESENTATION**

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

215. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

217. DEFENDANTS were negligent, reckless, and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions, and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

236. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the

use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION  
FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION  
CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

273. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Kentucky.

274. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

276. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting,

manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

278. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

279. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION  
UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;

- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

298. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

300. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

302. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

303. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

a. KY. REV. STAT. ANN. § 367.110 *et seq.* (Kentucky Consumer Protection Act).

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

323. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

325. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

335. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

336. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

337. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

338. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

341. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browwrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

348. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

350. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

365. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

366. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

368. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

370. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

371. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION  
NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

374. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

376. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

378. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

381. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

393. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

396. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

398. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, body dysmorphia, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION  
MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident state, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

410. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and

- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more

successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts that continue to this day.

428. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

## **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

## **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;

3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: July 26, 2022

Respectfully Submitted,

/s/ Robert A. Young

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen,

a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Kentucky and purposely avail themselves of the benefits of transacting business with Kentucky residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Kentucky and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Kentucky relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Kentucky.

18. Defendants advertise extensively in Kentucky, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are

prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Kentucky for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Kentucky-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Kentucky residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Western District of Kentucky.

### III. PARTIES

#### **Plaintiff**

21. Plaintiff Klinten Craig is an adult individual domiciled in Bowling Green, Warren County, Kentucky. Bowling Green, Kentucky, is Plaintiff's true, fixed, and permanent home and principal establishment, to which Plaintiff has the intention of returning whenever he is absent therefrom. Plaintiff intends to remain in Bowling Green, Kentucky, indefinitely.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware);

Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms. Defendant Meta is the sole member of this LLC Defendant.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing. Defendant Meta is the sole member of this LLC Defendant.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes

change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants’ social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them

to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.

- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions

that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children—in the face of its conscious, long-standing, plainly deficient age-verification protocols—demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking,

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta's own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user's News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that "[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news," with one data scientist noting that "[t]his is an increasing liability." In other internal memos, Meta concluded that because of the new algorithm, "[m]isinformation, toxicity, and violent content are inordinately prevalent." Other documents show that Meta employees also discussed Meta's motive for changing its algorithm—namely, that users began to interact less with

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

the platform, which became a worrisome trend for Meta's bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta's algorithm optimizes for angry, divisive, and polarizing content because it'll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse.

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols

apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out

of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

## **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Klinten Craig is a twenty one year old man who has been a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff developed a compulsion to engage with the Meta Platform(s), and began getting less and less sleep.

65. As a proximate result of his compulsion to interact with the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the addictive and mentally harmful effects of the Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of social media compulsion, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), he has developed numerous health conditions that he still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the Complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder,

anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

77. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

78. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

80. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

82. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

86. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

87. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

89. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff's injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

97. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

105. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used or signed up on Facebook and Instagram had he received adequate warnings and instructions that he could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the

---

<sup>11</sup> Id.

purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

118. Finally, the guide mentions the body image harms social media inflicts, but it solely blames influencers as the cause, rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a

break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION** **STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

124. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Kentucky. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

125. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

129. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;

- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **FOURTH CAUSE OF ACTION** **PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2)

intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm,

insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

166. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a

danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used Facebook and Instagram had he received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

177. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

179. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected,

tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

182. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;

- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately

harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

203. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

205. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes,"

comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;

- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video

content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising, and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

212. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **EIGHTH CAUSE OF ACTION** **NEGLIGENT MISREPRESENTATION**

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

215. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

217. DEFENDANTS were negligent, reckless, and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;

- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **NINTH CAUSE OF ACTION** **FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions, and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

236. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- i. Facebook makes body-image issues worse for one-third of girls;
- j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;

- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior

knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION** **FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to his detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from him regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, he would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **ELEVENTH CAUSE OF ACTION CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

273. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Kentucky.

274. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

276. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

278. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

279. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
- v. encourage bullying and conflict,
- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position he occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

298. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

300. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

302. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

303. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. KY. REV. STAT. ANN. § 367.110 *et seq.* (Kentucky Consumer Protection Act).

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers,

promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION  
BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

323. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION**  
**BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

325. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users' mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made

available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

335. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

336. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had he known the facts these Defendants failed to disclose.

337. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

338. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION  
FITNESS FOR A PARTICULAR PURPOSE**

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

341. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

348. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

350. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional

distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

365. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

366. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

368. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

370. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

371. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

374. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

376. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

378. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

381. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who

were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media

compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

393. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction,

depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

396. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

398. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed

to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, self-harm, depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state, Kentucky. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Kentucky.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-

harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta’s internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don’t use social media.

410. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by

suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused his injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused his injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook

and Instagram and that these products caused his injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts that continue to this day.

428. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that he had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;

11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: July 26, 2022

Respectfully Submitted,

/s/ Robert A. Young

AO 440 (Rev. 06/12) Summons in a Civil Action

# UNITED STATES DISTRICT COURT

for the

Western District of Kentucky

**Klinten Craig**

*Plaintiff(s)*

v.

**Meta Platforms, Inc., Facebook  
Holdings, LLC, Facebook Operations, LLC,  
Facebook Payments, Inc., Facebook  
Technologies, LLC, Instagram, LLC,  
& Siculus, Inc.**

*Defendant(s)*

Civil Action No. 1:22-CV-87-GNS

## SUMMONS IN A CIVIL ACTION

To: *(Defendant's name and address)*

Facebook Holdings, LLC  
c/o Corp Service Co.  
d/b/a CSC Lawyers Incorporating Service  
2710 Gateway Oaks Drive, Suite 150N  
Sacramento, California 95833-3505

A lawsuit has been filed against you.

Within 21 days after service of this summons on you (not counting the day you received it) — or 60 days if you are the United States or a United States agency, or an officer or employee of the United States described in Fed. R. Civ. P. 12 (a)(2) or (3) — you must serve on the plaintiff an answer to the attached complaint or a motion under Rule 12 of the Federal Rules of Civil Procedure. The answer or motion must be served on the plaintiff or plaintiff's attorney, whose name and address are:

Joseph G. VanZandt  
BEASLEY ALLEN CROW  
METHVIN PORTIS & MILES, LLC  
234 Commerce Street  
Montgomery, AL 36103  
Tel: 334-269-2343

& OWSLEY LLP  
1101 College Street  
Bowling Green, KY 42101  
Tel.: 270-303-9021  
byoung@elpolaw.com

If you fail to respond, judgment by default will be entered against you for the relief demanded in the complaint. You also must file your answer or motion with the court.

CLERK OF COURT

Date: \_\_\_\_\_

\_\_\_\_\_  
*Signature of Clerk or Deputy Clerk*

Civil Action No. 1:22-CV-87-GNS

**PROOF OF SERVICE**

*(This section should not be filed with the court unless required by Fed. R. Civ. P. 4 (l))*

This summons for *(name of individual and title, if any)* \_\_\_\_\_  
was received by me on *(date)* \_\_\_\_\_.

☐ I personally served the summons on the individual at *(place)* \_\_\_\_\_  
\_\_\_\_\_ on *(date)* \_\_\_\_\_; or

☐ I left the summons at the individual's residence or usual place of abode with *(name)* \_\_\_\_\_  
\_\_\_\_\_, a person of suitable age and discretion who resides there,  
on *(date)* \_\_\_\_\_, and mailed a copy to the individual's last known address; or

☐ I served the summons on *(name of individual)* \_\_\_\_\_, who is  
designated by law to accept service of process on behalf of *(name of organization)* \_\_\_\_\_  
\_\_\_\_\_ on *(date)* \_\_\_\_\_; or

& Siculus, Inc.**

*Defendant(s)*

Civil Action No. 1:22-CV-87-GNS

## SUMMONS IN A CIVIL ACTION

To: *(Defendant's name and address)*

Facebook Operations, LLC  
c/o Corp Service Co.  
d/b/a CSC Lawyers Incorporating Service  
2710 Gateway Oaks Drive, Suite 150N  
Sacramento, California 95833-3505

A lawsuit has been filed against you.

Within 21 days after service of this summons on you (not counting the day you received it) — or 60 days if you are the United States or a United States agency, or an officer or employee of the United States described in Fed. R. Civ. P. 12 (a)(2) or (3) — you must serve on the plaintiff an answer to the attached complaint or a motion under Rule 12 of the Federal Rules of Civil Procedure. The answer or motion must be served on the plaintiff or plaintiff's attorney, whose name and address are:

Joseph G. VanZandt  
BEASLEY ALLEN CROW  
METHVIN PORTIS & MILES, LLC  
234 Commerce Street  
Montgomery, AL 36103  
Tel: 334-269-2343  
Joseph.VanZandt@BeasleyAllen.com

**UNITED STATES DISTRICT COURT  
WESTERN DISTRICT OF LOUISIANA  
ALEXANDRIA DIVISION**

DARLA GILL, individually and as the Personal Representative of the Estate of Emma Claire Gill, and Joseph Ryan Gill, individually,

Plaintiffs,

v.

META PLATFORMS, INC., formerly known as FACEBOOK, INC.; SNAP, INC.; TIKTOK, INC.; and BYTEDANCE, INC.,

Defendants.

CIVIL ACTION NO.

JUDGE:

MAGISTRATE:

JURY TRIAL DEMAND

“In these digital public spaces, which are privately owned and tend to be run for profit, there can be tension between what’s best for the technology company and what’s best for the individual user or for society. Business models are often built around maximizing user engagement as opposed to safeguarding users’ health and ensuring that users engage with one another in safe and healthy ways. . . .”

*Protecting Youth Mental Health*, The U.S. Surgeon General’s Advisory (December 7, 2021)

**COMPLAINT**

Plaintiffs Darla Gill and Joseph Ryan (“Ryan”) Gill, individually, and Darla Gill as the Personal Representative of the Estate of Emma Claire Gill bring this action against Meta Platforms, Inc., formerly known as Facebook, Inc. (“Meta”), doing business as Instagram (“Instagram”), Snap, Inc., doing business as Snapchat (“Snapchat”), TikTok, Inc. and ByteDance, Inc. (collectively, “TikTok”) and allege as follows:

**I. INTRODUCTION**

**A. Plaintiffs’ Claims**

1. This product liability action seeks to hold Defendants’ products responsible for causing and contributing to burgeoning mental health crisis perpetrated upon the children and teenagers of the United States by Defendants and, specifically, for injuries they caused Emma

Claire Gill resulting in her wrongful death.

2. Emma Claire suffered injuries proximately caused by Defendants’ unreasonably dangerous and defective social media products, which include first and foremost a dangerous addiction to social media. Emma Claire’s addiction led to sleep deprivation, anxiety, and ultimately death.

3. Defendants’ social media products likewise caused foreseeable harms to Emma Claire’s parents, Plaintiffs Darla and Ryan Gill. Darla and Ryan Gill did not consent to Defendants distributing or otherwise providing their child with access to harmful social media products and were emotionally and financially harmed by Defendants’ addictive design and distribution and provision of harmful social media products to their minor child.

4. Each of Defendants’ products contains unique product features which are intended to and do encourage addiction, and unlawful content and use of said products, to the detriment of Defendants’ minor users.

5. These social media products create a “perfect storm” of addiction, social comparison, and/or exposure to incredibly harmful content and harmful product features. Defendants program and operate their algorithms and social media products more generally in a manner that prioritizes engagement and profits over user safety. This includes designing and distributing inherently dangerous products that appeal to kids, and operating algorithms and other technologies in a manner that promotes and amplifies harmful content.

6. Defendants also advertise their products in misleading ways, assuring parents and the public that their products are safe and fun and that they utilize their technologies to ensure a safe and age-appropriate experience. Nothing could be further from the truth.

7. Plaintiffs suffered several emotional, physical, and financial harms as a result—all of which are a symptom of the current health crisis among American youth and, by natural and foreseeable extension, American families, caused by certain, harmful social media products such as the ones at issue in this case.

## **B. Defendants Know or Should Know of the Harm Their Products Cause**

8. In late 2021, a Facebook whistleblower disclosed thousands of internal Meta documents to the United States Securities Exchange Commission (the “SEC”) and Congress. The Facebook Papers prove known dangerous designs and design defects as well as operational decisions and calculations, and a causal relationship between use of Defendants’ various social media products in their current form and resulting addiction, anxiety, depression, eating disorders, exploitation and grooming, and what Meta internally refers to as “SSI” (Suicide and Self Injury). While the Facebook Papers originate from Meta, they prove dangerous designs and design defects as well as other dangers caused by the social media products of all Defendants. Examples of the Facebook papers include and can be found at the following locations, to name only some examples:

9. The Wall Street Journal and Digital Wellbeing published several of the Facebook Papers in November 2021,<sup>1</sup> including but not limited to,

- a. Social Comparison: Topics, celebrities, Like counts, selfies [Jan 2021 internal document reporting findings from a 9-country user survey (n=100,000) in Australia, Brazil, France, Germany, Great Britain, India, Japan, Korea, USA].
- b. Appearance-based Social Comparison on Instagram [Feb 2021 internal document reporting finding from a 10-country user survey (n=50,590) across Australia, Brazil, France, Germany, Great Britain, India, Japan, Korea, Mexico, USA].
- c. Mental Health Findings: Deep dive into the reach, intensity, Instagram impact, self-reported usage and support of mental health issues [2019 internal document reporting findings from a 6-country user survey (n=22,410) across Brazil, India, Indonesia, Japan, Turkey, USA].
- d. Teen Girls Body Image and Social Comparison on Instagram – An Exploratory Study in the US [2020 internal document reporting findings from a one-country (US) qualitative research study (n = 15 for focus groups) with young Instagram users (aged 13-21, supplemented by online diaries (n = 10) and video interviews (n = 7)].
- e. Teen Mental Health Deep Dive [2019 internal document reporting findings from a 2-country (UK and US) qualitative research study (n = 40 in-person interviews, with follow-up video calls (n = 8) with young Instagram users (aged 13-17), supplemented by online survey (n = 2,503)].
- f. Teens and Young Adults on Instagram and Facebook [2021 internal document

<sup>1</sup> <https://digitalwellbeing.org/the-facebook-files-on-instagram-harms-all-leaked-slides-on-a-single-page/>

reporting findings from a five-country study (Australia, France, Great Britain, Japan, USA) with user data].

10. Gizmodo has been publishing the Facebook Papers, several at a time, also starting in November 2021,<sup>2</sup> including but not limited to,

11. These documents are all incorporated by reference into this Complaint and the sole reason they are not attached is length and file size. However, the contents of these documents and other Facebook Papers are material to Plaintiffs’ claims.

12. On information and belief, all Defendants have some degree of knowledge about the harms their products cause users, particularly teen, child, and other vulnerable user populations, and all Defendants continue to design, market, sell and operate those products in a harmful and dangerous manner anyway and in the interest of competing with one another and increasing already astronomical profits. Meta is simply the only one whose documents have been disclosed; even then, only a small fraction of relevant Meta documents has been disclosed. Plaintiffs anticipate literal truckloads of additional evidence that will support these claims and show precisely what these social media designers and distributors have done in the name of corporate greed.

13. All Defendants have actual knowledge that children under the age of 13 are using their social media products; that Defendants’ social media products are highly addictive and harmful to a significant population of all users, but especially teens, children, and certain protected classes (women, people of color, and low socioeconomic status (“SES”)); that certain design

features that serve no functional, informational, societal, or educational purpose (for example, “likes” and “streaks”) are causing harm to users; and that algorithms and algorithm-driven product features are dangerous and harmful by design and as designed. Defendants knew about these harms, could have made their products safer at minimal cost and expense, and opted to stay the course instead and to increase user engagement and already astronomical revenue.

14. Despite knowledge of the dangerous and harmful characteristics of their products, Defendants have made and continue to make calculated cost-benefit business decisions and are consistently prioritizing their already astronomical profits over human life.

### **C. The Social Media Epidemic Among Children**

15. On December 7, 2021, the United States Surgeon General issued an advisory cataloging a dramatic increase in teen mental health crises including suicides, attempted suicides, eating disorders, anxiety, depression, self-harm, and inpatient admissions. Between 2007 and 2018, for example, suicide rates among youth ages 12 to 16 in the U.S. increased a staggering 146 percent. Several cities across the United States have been experiencing teen suicide rates in the range of 1 every year or other year, which is an absolute crisis for our country—the death by suicide of a child is something that should be an exception and not a rule. The incidence of serious depression and dissatisfaction with life in this age group has likewise increased dramatically, and there is no question that these harms relate in no small part to companies like Defendants.

16. The most significant and far-reaching change to the lives of young people in the last ten years has been the widespread adoption of social media platforms and prominently, for purposes of this lawsuit,

- a. The Instagram product which launched in 2010 and was acquired by Facebook (now Meta) in 2012, and which is designed and distributed by Meta.
- b. The Snapchat product which launched in 2011, and which is designed and distributed by Snap, Inc.
- c. The TikTok product which launched in 2016, and which is designed and distributed by TikTok.

17. By 2014, 80 percent of high-school students said they used social media daily, and 24 percent said that they were online “almost constantly.” Moreover, there are an estimated 24.5 million teen internet users in the U.S. alone. What this means for each of these defendants is more than 15 million U.S. teens (aged 13 to 17) using their social media product on a regular basis.

18. Teens make up a significant percentage of all social media users and, in the United States, they also represent Defendants’ only significant opportunity for growth due to saturation of the adult market. Defendants see them as a gateway for other potential users, that is, they use U.S. teens to recruit parents and adult relatives as well as younger siblings – including pre-teen siblings Defendants are not permitted provide accounts to but to whom Defendants do provide accounts, by simply refusing to verify age and identification on the front end and by turning a blind eye to public comments, posted videos, and other instances where these underage users openly announce that they are underage. On information and belief, U.S. teens also are the most lucrative for Defendants when it comes to advertising revenue as well. While all reasons for this are not yet known, it is known that teens spend more time on average than other users and, further, Defendants report exponentially higher revenue per user in connection with United States users on an annual basis.

#### **D. Disparities Between Public Statements and Harm to Children**

19. Peer reviewed studies and available medical science have also identified a particular type of social media and electronic device use associated with major mental health injuries, including depression, self-harm, eating disorders, suicide attempts and ideation, dissatisfaction with life, depression, and sleep deprivation. Large observational studies and experimental results also point to heavy use of certain social media products as cause of increased depression, suicidal ideation, and sleep deprivation among teenagers, particularly teenage girls. Defendants have spent years publicly denying these findings—while internally confirming them.

20. Defendants have denied for years that their products are harmful or addictive while, in fact, Defendants’ products *are* harmful and addictive, facts that the social media industry has been aware of for years. Defendants knew the truth and chose to conceal it and not disclose to the

public or parents of young users, as Defendants knew that such disclosure would prevent them from further growth and development of these products and product features.

21. In Meta’s case, for example only, the Facebook Papers include years’ worth of studies and reports discussing the fact that Meta’s social media products are addictive and harmful, and that use of those products can and does lead to serious mental health issues in a significant number of users, including things like anxiety, depression, eating disorders, and SSI. This includes research confirming that higher engagement (*i.e.* more sessions and/or time spent over a certain threshold) causes higher negative effect for users, and other hallmarks of addiction (referred to by Meta as “problematic use”). In late 2019, Meta conducted an “exploratory study” in the United States, aimed at examining “Teen Girls Body Image and Social Comparison on Instagram.”<sup>3</sup> The resulting Power Point found that use of Defendants’ social media products made certain social comparison-based harms worse for a significant percentage of teen girls. *See id.* at p. 29 (referring to its own product mechanics as “addicting” and noting that TikTok users often spend more than four hours on TikTok every day).<sup>4</sup>

22. Moreover, the type of harms described in the Facebook Papers relate to specific product mechanisms and product features. Defendants have designed each of their products to contain unique product features which are intended to and do encourage addiction, and unlawful content and use of said products, to the detriment of Defendants’ minor users and their families.

23. Defendants know exactly the harms that their products are causing yet remain focused on maintaining and increasing user engagement which translates into greater profits for Defendants. On information and belief, there have been studies dating back almost a decade on related topics, which studies are not known or, in some cases, even made available to the general public; but Defendants knew or should have known about these studies as, often times, they related to the products being designed and developed by Defendants and Defendants’ scientists and/or

---

<sup>3</sup> See <https://digitalwellbeing.org/wp-content/uploads/2021/10/Facebook-Files-Teen-Girls-Body-Image-and-Social-Comparison-on-Instagram.pdf>

<sup>4</sup> *Id.*

engineers.<sup>5</sup>

24. Defendants also know that their recommendations and other product features, that is, features whereby Defendants promote and/or send content to users and otherwise try to connect users who, in fact, are often complete strangers, result in disproportionate harms to vulnerable users including children, teens, teen girls, and women. Yet Defendants continue to reap astronomical profits at the expense of these users.

25. For example, each of these Defendants has a “friend” and/or “follow” recommendation feature in their social media product. This refers to a feature whereby Defendants recommend to users other users they may “want” to friend or follow, with the intent that these users will then connect via a friend request mechanism, direct messaging, and similar product features meant to increase engagement among users. These recommendation systems serve the singular purpose of making more money for Defendants in that they are meant to keep users engaged through connections, which connections are suggested, prompted, and encouraged by Defendants. But also, which connections involve complete strangers and where Defendants’ own recommendation systems frequently make and perpetuate harmful recommendations.

26. In terms of harms to young girls,

- a. 3.5% of teen girls on Instagram say the platform makes thoughts of “Suicide and Self Injury” worse.
- b. 17% of teen girl Instagram users say the platform makes “Eating Issues” (e.g. anorexia and bulimia) worse;
- c. “We make body image issues worse for 1 in 3 teen girls.”

*See “Mental Health Findings,” supra.*

27. Plaintiffs do not yet have access to internal documents for all defendants, but those are not needed to infer that these defendants employ similar—equally harmful—social media features. Meta research concludes that Meta is not the only one causing harm to teens and children.

---

<sup>5</sup> *See, e.g.*, Sept. 30, 2021, Senate Hearing Transcript, at 1:07:47 (reference to study published in National Academy of Sciences “way back in 2014.”).

*See, supra*, “Teen Girls Body Image and Social Comparison on Instagram – An Exploratory Study in the US” (March 2020) (“Instagram is seen as having the highest impact, although TikTok and Snapchat aren’t far behind”).

28. On information and belief, all Defendants are aware of algorithmic bias and know or should know that each of their products are defective in this regard.

29. Defendants also know that their products are contributing to teen depression, anxiety, even suicide, and self-harm. Why don’t they change these harmful product features and stop utilizing algorithms in connection, at least, with teen accounts? Because Defendants’ top priority is growth and competition concerns, and Defendants see “acquiring and retaining” teens as essential to their survival. As Defendants know, teenagers spend significantly more time on social media than adults (both total time and user sessions—which are usage patterns linked to addiction), represent Defendants’ greatest (if not only) growth opportunity in the US, and can be used by Defendants to recruit older and younger family members and friends.

30. In TikTok’s case, TikTok internal documents show that children 14 and under comprise half—if not more—of TikTok’s entire U.S. user base.<sup>6</sup>

31. Meta, Snap, and TikTok also know that they cannot expect significant growth in the U.S. beyond the estimated four million teens that begin using the internet each year.

32. Meta, Snap, and TikTok also believe that teens are the best way to capture household adults and children. Pre-teens look to their older siblings in terms of which social media products to use and how to use them, and often obtain guidance from them to open their first account, while parents and grandparents are influenced by teen household members and open accounts to participate in their child’s life.

33. Meta, Snap, and TikTok likewise know that children under 13 are using their products, and see these children as a tappable and valuable market, which they must capture and

---

<sup>6</sup> Raymond Zhong & Sheera Frenkel, *A Third of TikTok’s U.S. Users May Be 14 or Under, Raising Safety Questions*, N.Y. Times, Aug. 14, 2020, available at <https://www.nytimes.com/2020/08/14/technology/tiktok-underage-users-ffc.html>

use to increase revenue and ensure competitive positioning in the long-term; *see also* <https://www.nytimes.com/2020/08/14/technology/tiktok-underage-users-ftc.html> (insiders report knowledge of underage users posting and TikTok’s failure to act).

34. The reality is that children are a priority demographic for Defendants and Defendants will do anything to increase and maintain engagement among them. On October 26, 2021, the New York Times reported on a 2018 internal Meta marketing report lamenting loss of teenage users to competitors’ platforms as “an existential threat.”<sup>7</sup> Defendants spend billions on these recruiting efforts, and do not care that they are harming children and teens in the process.

35. Defendants go so far as to study brain and identify vulnerabilities and other areas where they can adjust their products and approach to appeal more to the teen demographic. For example, in December of 2021, Insider reported on an internal Meta document titled “The Power of Identities: Why Teens and Young Adults Choose Instagram.” It is clear from this document that Meta, and its competitors, are marketing to children and teens – including in ways meant to exploit the differences between teens and adults.

36. Identified among Meta’s internal documents are other product features that cause harm to teen users, which product features are relatively standard among Defendants’ products. For example, product features that enable users to like or love other user’s content results in increased addiction and social comparison harms, which Meta considered hiding for the benefit of its users (referred to as “Project Daisy”) but ultimately did not.<sup>8</sup>

37. Another example is Direct Message feature possessed by Defendants’ social media products, and lack of restrictions when it comes to teens and children. Defendants’ products do something no other product does: they encourage children and teens to use their product, then they make those children and teens accessible to strangers (for example, by permitting public profiles

---

<sup>7</sup> See <https://www.nytimes.com/2021/10/16/technology/instagram-teens.html>; *see also* <https://www.businessinsider.com/leaked-docs-facebook-papers-instagram-competition-tiktok-youtube-snapchat-2021-12?op=1> (“Instagram and Facebook are terrified of losing the attention and affection of young users.”).

<sup>8</sup> See <https://www.nytimes.com/2020/01/17/business/instagram-likes.html>

and/or viewing of content posted by these children and teens), then they provide predators with a direct means of communication (Direct Messaging features) that is both unfettered and, according to Defendants, unmonitored. In fact, Defendants monitor and/or have the technology needed to detect critical harm areas, such as sexual exploitation, bullying, and even underage use.

38. On information and belief, Defendants are incredibly guarded when it comes to the types of data they collect, to the point where they will not even disclose certain, critical information to parents and/or police and other law enforcement upon request.

39. In the case of Defendant Snap, its product is even more harmful in this regard *because* of its disappearing design. The Snap product is designed in a manner that encourages and enables such abuse, which dangerous and defective design serves Snap's economic interests by increasing its user base. For example, one common pattern among predators—which Defendants know or should know about—is to find children and teens on Instagram and encourage them to open or move the discussion to Snapchat, as it is generally understood that it is easier to get away with child exploitation and abuse through Snap's disappearing message feature.

40. At the same time, Defendant Snap's disappearing design and marketing of that feature is particularly harmful to teens who rely on Snap's representations when taking and sending photos, only learning after the fact that recipients have means to save photos.

41. Meta has studied certain product features and resulting harms and obtained recommendations for product changes that would make these products less harmful to teen users; only for Meta leadership to determine that the risk of losing popularity and engagement among Instagram's teen user base outweighs the harms these product features are unquestionably causing.

42. Defendants know that teens are more vulnerable and suffer harms from use of their social media products at higher rates than adult users. Defendants also know that teens access social media longer and more often than adults.

43. Advertisers are willing to pay a premium for unfettered access to child and teens so Defendants, in turn, work hard to make their social media products as appealing to teens as possible, even though they are harmful to teens.

### **E. Defendants' Focus on Profits Over Safety**

44. Defendants know the harmful impact their social media products have. Instead of warning users and/or re-designing their products to make them safer, however, Defendants choose enhancing profits over protecting human life.

45. Indeed, the problematic use identified in medical literature is precisely the type of use Defendants Meta, Snap, and TikTok have designed their products to encourage through psychological manipulation techniques—sometimes referred to as persuasive design—that is well-recognized to cause all the hallmarks of clinical addiction.

46. Defendant Meta slowly switched its News Feed (in its Facebook and Instagram products) from maximizing time-spent to maximizing sessions, even though it knew that maximizing sessions is harmful to its users. Defendant Meta also knows that its “like” button causes harmful social comparison, and results in anxiety and depression in teens, and Meta leadership ultimately rejected recommendations to launch Project Daisy due to the risk of engagement decrease, advertising revenue loss, and similar economic reasons. Meta has repeatedly refused to protect its users from harm for fear of offending other users, decreasing teen engagement, and/or losing revenue from its advertisers as a result.

47. Defendant Snap has designed product features that serve no utility but that help children and predators hide harmful content from parents and authorities, and that promote illegal and dangerous behavior. Its failure to enforce its one account rule further promotes and amplifies bullying and other unwanted interactions, making it impossible for victims to escape the ill effects of the Snap product. Defendant Snap also has implemented inherently addictive and dangerous product features, such as Snap Streaks and various trophies and unknown rewards systems, meant to hook teens at any cost. Likewise, it has implemented various inherently dangerous features, non-communication features over the years, such as Snap Cash and Snap Maps.

48. Defendant TikTok has designed and implemented inherently addictive product features, as well as technologies that go above and beyond standard algorithms utilized by many of its competitors. It knows or has reason to know (a) when underage children are utilizing its

social media product, (b) that its product exposes children to unwanted interactions through direct messaging features, and (c) that features of its product addict children to its product.

49. Ultimately, Defendants all have control over their technology and product design and how it is used and implemented. In all cases, Defendants can monitor and protect children, but in every case, Defendants have chosen instead to make their products more popular and more accessible – at the cost of the health and wellbeing of their young users. In other words, Defendants know that their products are harmful and dangerous, could make them less harmful and less dangerous, but opt instead for attracting and retaining new users (valuing profits ahead of safety).

50. Defendants are perfectly capable of enforcing their own Terms of Service, Community Standards, and other guidelines, with minimal cost. They can adjust controls in a manner that would better protect their users, especially children and teens, from certain, significant harms caused by Defendants’ product features, user setting options, recommendations, and algorithmic-driven product features. Yet, Defendants repeatedly ignore these issues, choosing profits over human life. That is not a choice Defendants have the right to make.

51. On information and belief, Defendants Meta, Snap, and TikTok also do not employ adequate or reasonable safety controls in the development of their social media products and product features and, once invested in and/or launched, do not address safety issues as those become known.

52. This is the business model utilized by all Defendants – engagement and growth over user safety – as evidenced by the inherently dangerous design and operation of their social media products. At any point any of these Defendants could have come forward and shared this information with the public, but they knew that doing so would have given their competitors an advantage and/or would have meant wholesale changes to their products and trajectory. Defendants chose to continue causing harm and concealed the truth instead.

## **F. Overview of Claims**

53. Plaintiffs bring claims of strict liability based upon Defendants’ defective design of their social media products that render such products not reasonably safe for ordinary consumers

or minor users. It is technologically feasible to design social media products that substantially decrease both the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of such products with a negligible increase in production cost.

54. What’s the world has learned from the Facebook Papers is that Meta and its competitors in the social media space *could* provide social media products that do not promote or amplify harmful content to teens and children – these companies simply choose to not do so as that would mean not relying on harmful algorithms and fewer billions of dollars in revenue.

55. Plaintiffs also bring claims for strict liability based on Defendants’ failure to provide adequate warnings to minor users and their parents of danger of mental, physical, and emotional harms and sexual abuse arising from foreseeable use of their social media products. The addictive quality of these products and their harmful algorithms are unknown to minor users and their parents.

56. Plaintiffs also bring claims for common law negligence arising from Defendants’ unreasonably dangerous Instagram social media products and their failure to warn of such dangers. Defendants knew, or in the exercise or ordinary care should have known, that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms. Defendants also failed to warn minor users and their parents of foreseeable dangers arising out of use of their social media products.

57. Defendants’ own former and/or current developers often do not allow their own children and teenagers to use these social media products.<sup>9</sup> For many years, Defendants have had actual knowledge that their social media products are dangerous and harmful to children but have actively concealed these facts from the public and government regulators and failed to warn parents about these known harms for continued economic gain.

58. Plaintiffs also bring claims under California’s Unfair Competition Law (“UCL”), Cal. Bus. & Prof. Code, §§17200, et seq. The conduct and omissions alleged herein constitute

---

<sup>9</sup> See, e.g., <https://www.foxnews.com/tech/former-facebook-exec-wont-let-own-kids-use-social-media-says-its-destroying-how-society-works>

unlawful, unfair, and/or fraudulent business practices prohibited by the UCL.

59. Finally, Plaintiffs bring claims under the Louisiana Unfair Trade Practices and Consumer Protection Law (“LUTPA”), La. Rev. Stat. § 51:1401, *et seq.* Defendants spent years lying to Congress and the public about the nature of their products and harms they cause. Defendants made affirmative statements and material omissions of fact designed to lull potential users into trusting that their social media products were safe, and that Defendants were prioritizing user safety over its own profits. Defendants’ unfair and deceptive conduct offends established public policy and is immoral, unethical, oppressive, unscrupulous, and substantially injurious.

60. Plaintiffs’ claims do not arise from third party content, but rather, Defendants’ product features and designs, including but not limited to algorithms and other product features that addict minor users, amplify and promote harmful social comparison, affirmatively select and promote harmful content to vulnerable users based on their individualized demographic data and social media activity, direct harmful content in great concentrations to vulnerable user groups, put minor users in contact with dangerous adult predators, enable and encourage minors to hide harmful content from their family and friends, encourage and facilitate exploitation and abuse of minors through marketing, recommendation and messaging features, and data policies involving the concealment and/or destruction of information necessary to the protection of minors, and otherwise prioritize engagement (and Defendants’ profits) over user safety.

## II. PARTIES

61. Plaintiffs Darla and Ryan Gill are individuals residing in Goldonna, Louisiana, and Plaintiff Darla Gill is in the process of being appointed the administrator of the Estate of her daughter, Emma Claire Gill, who died on August 8, 2021. Plaintiffs have not entered into any User Agreements or other contractual relationship with any of the Defendants herein in connection with Emma Claire Gill’s use of their social media products. As such, in prosecuting this action Plaintiffs are not bound by any arbitration, forum selection, choice of law, or class action waiver set forth in said User Agreements. Plaintiffs expressly disaffirm all User Agreements into which their daughter may have entered.

62. Defendant Meta Platforms, Inc., formerly known as Facebook, Inc., is a Delaware corporation with its principal place of business in Menlo Park, CA. Defendant Meta Platforms owns and operates the Facebook and Instagram social media platforms, application that are widely available to users throughout the United States and in Louisiana.

63. Defendant Snap, Inc. is a Delaware corporation with its principal place of business in Santa Monica, CA. Defendant Snap owns and operates the Snapchat social media platform, an application that is widely marketed by Snap and available to users throughout the United States and in Louisiana.

64. Defendant TikTok, Inc. is a California corporation with its principal place of business in Culver City, CA. Defendant TikTok owns and operates the TikTok social media platform, an application that is widely marketed by TikTok and available to users throughout the United States and in Louisiana.

65. Defendant ByteDance Inc. is a Delaware corporation with its principal place of business in Mountain View, CA. Defendant ByteDance owns and/or operates TikTok, Inc., and owns and/or operates the TikTok social media platform, an application that is widely marketed by TikTok and available to users throughout the United States and in Louisiana.

### **III. JURISDICTION AND VENUE**

66. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000, and Plaintiffs and Defendants are residents and citizens of different states.

67. This Court has personal jurisdiction over all Defendants because these defendants transact business in Louisiana with Louisiana residents, Plaintiffs' claims set forth herein arise out of and relate to Defendants' activities in the State of Louisiana, and Defendants have each purposefully availed themselves of the benefit of transacting business in Louisiana with Louisiana residents. For example, all of these defendants advertise and encourage use of the products at issue in Louisiana; enter into millions of contracts with Louisiana residents, including as relating to use of these same social media products; provide access to significant percentages of Louisiana's

population to these social media products; generate and send emails and other communications to Louisiana residents, including Emma Claire; design and distribute push notifications, recommendations, and other communications to Louisiana residents, aimed at encouraging addiction and use of Defendants' social media products, as they did here; actively and extensively collect personal and location information belonging to Louisiana residents, including Emma Claire; use the location of Louisiana residents, including Emma Claire, as a factor in their algorithms that generate and send communications to users, including Emma Claire; and generate revenue from Louisiana activities that dwarfs what most Louisiana-based businesses generate. In some cases, Defendants may also have employees located in the state of Louisiana, who work remotely while located in this State.

68. Nor will Defendants stop interacting with Louisiana residents or bar Louisiana residents from distribution and use of their social media products, because revenue they obtain because of Louisiana users and having users in Louisiana is too significant. Walling off distribution to Louisiana would have a devastating impact on Defendants' entire business, irrespective of Defendants' total number of users worldwide.

69. Plaintiffs are also residents of Louisiana, Emma Claire acquired and used Defendants' products in Louisiana, and Plaintiffs suffered injuries here as a result.

70. Venue is proper in this District under 28 U.S.C. § 1391(b) because a substantial part of the events or omissions giving rise to Plaintiffs' claims occurred in this District.

#### **IV. FACTUAL ALLEGATIONS**

##### **A. Facebook and Instagram Background and Products**

71. Facebook is an American online social network service that is part of the Meta Platforms. Facebook was founded in 2004, at which time, it was nothing like the product it is today. When Facebook was first founded, only students at certain colleges and universities could use the social media product – which changed by 2006, such that anyone with an email address could now use it. Facebook became the largest social network in the world, with nearly three billion users as of 2021, and about half that number were using Facebook every day. The company's

headquarters is in Menlo Park, California. Facebook recently changed its name to, and is referred to herein and collectively with Instagram, as Meta.

72. Instagram is a photo sharing social media application. Its original focus was to facilitate communication through images by featuring photos taken on mobile devices. Instagram launched in October 2010 and Facebook acquired it for \$1 billion in April 2012. Once acquired, Instagram experienced exponential growth, design, and development changes. It went from 10 million monthly active users in September of 2012 to 50 million weeks after the acquisition, to more than 600 million by December of 2016, and it continues to grow. Meta instituted dozens of product changes (also known as “growth hacks”) that drove this increased engagement, but at the expense of the health and well-being of Instagram’s users—especially teens and children.

73. Meta’s recommendation-based feeds and product features promote harmful content. Meta’s algorithms are programmed to prioritize number of interactions and not quality of interactions. Worded otherwise, Defendants promote and amplify content based on engagement objectives and not the health and well-being of their users, which renders their social media products inherently dangerous and defective, particularly when used by teens and children.

74. Both the Facebook and Instagram products show users a “feed.” A user’s “feed” is a comprised of a series of photos and videos posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram.

75. Meta exerts control over a user’s Instagram “feed,” including through certain ranking mechanisms, escalation loops, and/or promotion of advertising and content specifically selected and promoted by Meta based on, among other things, its ongoing planning, assessment, and prioritization of the types of information most likely to increase engagement. In the case of certain user groups, like teens, this control translates to deliberate and repeated promotion of harmful and unhealthy content, which Meta knows is causing harm to its young users.

76. In 2021, Senators Richard Blumenthal, Marsha Blackburn and Mike Lee tested and confirmed the fact that Meta’s recommendation-based feeds and product features promote harmful content by having several accounts opened while providing information indicating that the users were teenage girls,

"Within an hour all of our recommendations promoted pro-anorexia and eating disorder content," Blumenthal said. "Nothing has changed. It's all still happening."

Sen. Mike Lee, R-Utah, said his office created an account for a 13 year old girl. Shortly afterward, the algorithm recommended a famous female celebrity to follow and when they did, Lee said, "It went dark fast."

The fake account was flooded with content about diets, plastic surgery and other damaging material for an adolescent girl, he said.

In another example this week, Blackburn's staff exposed a flaw in Instagram's setting for teens under 16.

According to Instagram's policies, new teenage accounts should automatically default to a private setting. But when Blackburn's team set up a phony account for a 15 year old girl, it automatically defaulted to public.

Mosseri acknowledged the error, explaining the mistaken default setting was triggered because the account was created on a web browser, as opposed to a mobile app.

"We will correct that," he said.

See <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>. Meta has had almost a decade to fix these product defects but has not – instead, its products have severely harmed millions of teens in the U.S. alone.

77. The Instagram product also has a search feature called “Explore,” where a user is shown an endless stream of content that is selected by an algorithm designed by Meta based upon the users’ demographics and prior activity in the application. This is not content the user has searched for or requested. Instead, it is content Meta selects via its algorithms (which Meta in

turn programs to increase engagement and in other ways Meta knows to be harmful to users, but more profitable to Meta, as well as paid advertisements created with Meta's assistance or approval, and the like.

78. Meta designed and/or operates its Explore product in a manner that promotes harmful and/or unhealthy content. Meta is aware of these inherently dangerous product features and has repeatedly decided against changing them and/or implementing readily available and relatively inexpensive safety measures, for the stated purpose of ensuring continued growth, engagement, and revenue increase.

79. The Instagram product also has features known as "Reels" and "Stories, which promote the use of short videos and temporary posts, respectively. These products were developed to appeal to teens and Meta knows that these products are addictive, as well as defective.

80. Meta prioritizes and promotes harmful content through these product features.

81. The promotion of harmful content has become so central to Defendants' business models that Defendants regularly opt to conceal the truth and continue harming users instead of making their products safer and less harmful.

82. Instagram profile and privacy settings also cause harm. Users' profiles on Instagram may be public or private, which is a product feature over which Meta exercises complete control. On public profiles, any user can view the photos, videos, and other content posted by the user. On private profiles, the user's content may only be viewed by the user's followers, which the user must approve. At all times relevant, Instagram profiles were public by default and Instagram allowed all users to message and send follow requests to underage users. But even now, when Instagram claims that it is defaulting certain categories of users into private profiles, all a user need do is change the profile setting and, once again, Instagram will allow all users to message and send follow requests to underage users. Meta can protect users from this specific harm, can do so immediately, and chooses to not do so as a matter of engagement and growth.

83. Permitting public profiles for underage users serves no critical purpose in terms of product functionality but, instead, it increases user engagement during onboarding (when a user

first starts using a social media product) by increasing user connections and generally by providing all users with greater access to other users, in this case, irrespective of their age. Unfortunately for young children and teens, a numerically significant percentage of those would-be connections are harmful. Defendants are aware of these harms and have opted to not make necessary and cost-effective changes to prevent it.

84. Defendant Meta's Direct Message settings also permit and encourage harm to vulnerable users. Harmful and dangerous interactions occur because of the Instagram direct message feature and current user settings, that is, Meta's chosen settings provide strangers (good or bad) with direct and unsupervised access to children and teens. Again, however, Meta opts for engagement over safety.

85. Meta's allowance of multiple accounts, refusal to verify age, identity, even authenticity of email addresses further exacerbates the harms by making it impossible to avoid unwanted interactions. Other users can literally open accounts as fast as those accounts can be blocked and, when coupled with the excessive and addictive usage habits Meta promotes among teens, these features create a perfect storm for depression, anxiety, and Suicide and Self-Harm.

86. Meta's push notifications and emails encourage addictive behavior and are designed specifically to increase use of its social media products. In the case of Instagram, Defendant Meta collects individualized data – not just about the user, but also about the user's friends and contacts – and then selects content and notification frequency for its users and notifies them via text and email. Meta's notifications to individual users are specifically designed to, and do, prompt them to open Instagram and view the content Instagram selected, increasing sessions, and resulting in greater profits to Instagram. More to the point, even the format of these notifications has been designed and re-designed with the specific purpose of pulling users back onto the social media platform—irrespective of a user's health or wellbeing.

87. Instagram also incorporates several product features that serve no functionality purpose, but that do make Meta's product more appealing to children and teens (*i.e.*, "likes" and filters, as well as avatars, emojis, and games) while simultaneously increasing social comparison

pressure and resulting harm (*i.e.*, “likes” and filters). The harm from these product features does not relate to a single “like” or filter, or any specific series of content or potential content. Rather, it is the product itself. Meta knows that these product features disproportionately harm teen girls and young women.<sup>10</sup>

88. Instagram also creates images and GIFs for users to post on their videos and pictures. Meta has also acquired publishing rights to thousands of hours of music, which it provides to its users to attach to the videos and pictures that they post on Instagram. The GIFs, images, and music are integral to the user’s Instagram post and are, in fact, designed to encourage posting. Indeed, in many cases, the only content in a user’s Instagram post is the image, GIF or music supplied by Meta. When users incorporate images, GIFs, and music supplied by Meta into their postings, Meta is functioning as a co-publisher of such content. An Instagram user who incorporates images, GIFs, or music supplied by Meta into their post is functionally equivalent to a novelist who incorporates illustrations into their story. Instagram can no longer characterize the images, GIFs, and music it supplies to its users as third-party content, just as the novelist cannot disclaim responsibility for illustrations contained in their book. Meta has made the deliberate decision to collaborate with its users in this regard and, as evidenced by Meta’s internal documents, Meta’s decision is motivated by the fact that such collaboration results in increased engagement and more profits for Meta itself.

89. Meta also has ownership and/or licensing, and other legal, rights in all third-party content, such that it is not “third-party content” at all. In 2012, Meta revised its Instagram Terms of Service to the following,<sup>11</sup>

To help us deliver interesting paid or sponsored content or promotions, you agree that a business or other entity may pay us to display your username, likeness, photos (along with any associated metadata), and/or actions you take, in connection with paid or sponsored content or promotions, without any compensation to you.

<sup>10</sup> See, e.g., the documents disclosed at <https://digitalwellbeing.org/wp-content/uploads/2021/10/Facebook-Files-Appearance-based-Social-Comparison-on-Instagram-.pdf>, *supra*.

<sup>11</sup> <https://www.theverge.com/2012/12/18/3780158/instagrams-new-terms-of-service-what-they-really-mean>

90. Its current terms (effective January 4, 2022) are different, but still grant Meta the right to use all third-party content at Meta’s sole and unilateral discretion,

- **We do not claim ownership of your content, but you grant us a license to use it.** Nothing is changing about your rights in your content. We do not claim ownership of your content that you post on or through the Service and you are free to share your content with anyone else, wherever you want. However, we need certain legal permissions from you (known as a “license”) to provide the Service. When you share, post, or upload content that is covered by intellectual property rights (like photos or videos) on or in connection with our Service, you hereby grant to us a non-exclusive, royalty-free, transferable, sub-licensable, worldwide license to host, use, distribute, modify, run, copy, publicly perform or display, translate, and create derivative works of your content (consistent with your privacy and application settings). This license will end when your content is deleted from our systems. You can delete content individually or all at once by deleting your account. To learn more about how we use information, and how to control or delete your content, review the [Data Policy](#) and visit the [Instagram Help Center](#).

91. Meta directly profits from the videos and pictures its users create in collaboration with Meta, as described above.

92. Meta knows that it is harming teens yet, when faced with recommendations that will reduce such harms, Meta’s leadership consistently opts for prioritization of profit over the health and well-being of its teen users—that is, the millions of teen users who continue to use its inherently dangerous and defective social media product every, single day.

93. Meta’s products are used by many millions of children every day.

## **B. Snapchat Background**

94. Snapchat was founded in 2011, by three Stanford college students, and quickly became a wildly popular social media product among U.S. teens. It is one of the most widely used social media products in the world and is used by more than 69% of all U.S. teens (age 13 to 17).<sup>12</sup> Snap’s headquarters is in Santa Monica, California.

95. Snapchat started as a photo and short video sharing social media application that allows users to form groups and share posts or “Snaps” that disappear after being viewed by the recipients. The Snapchat product became well-known for its self-destructing content feature.

<sup>12</sup> See <https://www.smartinsights.com/social-media-marketing/social-media-strategy/snapchat-statistics/>

Specifically, the Snapchat product allows users to form groups and share posts or “Snaps” that disappear after being viewed by the recipients. However, the Snapchat social media product quickly evolved from there, as its leadership made design changes and rapidly developed new product features intended to and that did increase Snapchat’s popularity among teen users.

96. In 2012, Snap added video capabilities to its Snapchat product, pushing the number of “snaps” to 50 million per day; in 2013, “Stories” and “Chat” features; in 2014, live video chat capabilities, “Our Story,” Geofilters and Community Geofilters, and Snapcash. And by 2015, advertisements were pervasive on Snapchat and, by 2018, 99% of Snap’s total revenue came from advertising, according to internal company financials. In other words, like Meta, Snap early on decided to monetize its userbase and, from that point forward, began changing its product in ways that made its product even more harmful to users but that paved the way for growth, engagement, and profits for Snap and its leadership and investors.

97. By 2015, Snapchat had over 75 million monthly active users and was the most popular social media application amongst American teenagers in terms of number of users and time spent using the platform. Snap currently estimates having between 92.8 and 96.6 million users in the United States, with at least 17 to 17.7 million of those being children under the age of 18. Against this backdrop, Snap advertises and promotes its product as safe and fun—which could not be further from the truth.

98. Snap uses an algorithm or similar technology to suggest connections, that is, Snap sends messages to users based on some secret formula Snap uses to determine whether someone should “friend” someone else. This is known as “Quick Add,” and these Snap-initiated messages result in exposure to harmful contacts, bullying, and dangerous predators. This feature contributes nothing to the product itself and serves no informational or communication purpose. Similar to Meta’s product, this product is designed to reinforce addiction and increase the odds of maintaining more users for longer by influencing user experience.

99. Snapchat users also have an “Explore” feed that displays content created by other users around the world. These product features are designed to grab and keep users’ attention for

as long as possible each day, and have led many people, from psychologists to government officials, to describe Snapchat as “dangerously addictive.”

100. As with Defendant Meta, Snap’s algorithms and/or similar technologies determine the content that gets recommended and/or populates its user experience on the Snapchat social media product. This includes content sent directly from Snap to its users, for Snap’s own purposes, and prior to any sort of user search or request for such content. And as with Defendant Meta, Snap knows or should know that its algorithms are promoting and amplifying harmful content to children and teens and are operating with a degree of algorithmic discrimination that is particularly harmful to Snap’s most vulnerable user groups.

101. Snapchat offers several unique messaging and data features. It is perhaps most famous for its self-destructing content design feature, which appeals to minors and makes it more difficult for parents to monitor their children’s social media activity. This is an inherently dangerous product feature because it both encourages and allows minor uses to exchange harmful, illegal, and sexually explicit images with adults, and provides those same adults with a safe and efficient vehicle to recruit victims. Snapchat is a go-to application for sexual predators because of this product feature.<sup>13</sup>

102. For years Snap has received reports of child abuse and bullying occurring through its product and because of its product features,<sup>14</sup> yet has kept those features in place as removing them would result in considerable impact on the popularity of Snap’s social media product.

103. Harmful and dangerous interactions likewise occur because of these and other Snapchat messaging features, which provide direct and unsupervised access to children and teens.

104. In 2014, Snapchat added “Stories” and “Chat” features that allowed users to post longer stories that could be viewed by users outside the user’s friends.

105. Snapchat also allows users to enable the sharing of their location, through a tool

---

<sup>13</sup> See, e.g., <https://phonespector.com/blog/what-are-the-dangers-of-snapchat-to-avoid/>

<sup>14</sup> See, e.g., <https://www.forbes.com/sites/zakdoffman/2019/05/26/snapchats-self-destructing-messages-have-created-a-haven-for-child-abuse/?sh=411b8e1d399a> (Snapchat Has Become A ‘Haven for Child Abuse’ With Its ‘Self-Destructing Messages’).

called Snap Map, which allows the users' followers (and the public for Snaps submitted by the users) to see the user's location on a map. At all times relevant, this feature was available to all users, including minors.

106. But also, Snap has developed artificial intelligence technology that detects adult users of Snapchat who send sexually explicit content to children and receive sexually explicit images from children. This technology furnishes Snap with actual knowledge that a significant number of minor users of Snapchat are solicited to send, and do send, sexually explicit photos and videos of themselves to adult users in violation of 18 U.S.C. § 1591(a)(1)-(2). Snap *could* protect its minor users, but in many instances, does not.

107. Snap also has a "My Eyes Only" product, which many parents do not know about – including Plaintiffs in this case. Snap's My Eyes Only Product encourages and enables young users to hide harmful content from parents by allowing them to hide content in a special tab that requires a passcode, and where content cannot be recovered – even by Snap itself – without the correct passcode. The content self-destructs if a user attempts to access the hidden folder with the wrong code. My Eyes Only has no practical purpose or use, other than to hide potentially harmful content from parents and/or legal owners of the devices used to access Snap.

108. In 2014, Snapchat released a feature called Snapcash that allowed users to send money to other users without regard to user age, identity verification, and/or parental consent. This was another inherently dangerous product feature and allowed predators to send money to children without the knowledge or consent of their parents. Upon information and belief, however, Snap discontinued this product feature.

109. Like Meta, Snap sends push notifications and emails to encourage addictive behavior and to increase use of its Snapchat product. Snap's communications are triggered and based upon information Snap collects from and about its users, and Snap "pushes" these communications to teen users in excessive numbers and disruptive times of day. These notifications are specifically designed to, and do, prompt them to open Snapchat and view the content Snapchat selected, increasing sessions, and resulting in greater profits to Snap. Even the

format of these notifications has been designed to pull users back on to the social media platform—irrespective of a user’s health or wellbeing.

110. The Snapchat social media product also features a series of rewards including trophies, streaks, and other signals of social recognition like the “likes” metrics available across other platforms. These features are designed to encourage users to share their videos and posts with the public. Moreover, these features serve no communication or informational purposes. They are designed to be addictive, and to encourage greater use of the Snap product without regard to any other content or third-party communication.

111. Snapchat incorporates several other product features that serve no functionality purpose, but that do make Snap’s product more appealing to children and teens (*i.e.*, avatars, emojis, and games) while simultaneously using known mechanisms to addict those same children and teens (*i.e.* streaks and trophies offering unknown rewards). These features were particularly addictive to Emma Claire, as well as the members of her basketball team, all of whom used Snap regularly and, at least in part, because of its addictive features.

112. The Snap Streak feature is unique to Snap’s product and is one of the most – if not the most – addictive products available “especially to teenagers.”<sup>15</sup> *See also* FBD 37/21, “Teen Meaningful Interactions and Feed post Feedback – Focus Groups” (May 2018), at p. 5 (“Streaks are a very important way for teens to stay connected. They are usually with your closest friends and they are addictive.” Snap knows that its Snap Streak product is addictive and has known for years but continues to provide that product to teens and children.

113. These are just some examples of Snapchat’s harmful product features.

114. Snap has also developed images for users to decorate the pictures or videos they post, and Snap has developed Lenses which are augmented reality-based special effects and sounds for users to apply to pictures and videos users post on Snapchat, and World Lenses to augment the environment around posts. Snap also has acquired publication rights to music, audio, and video

---

<sup>15</sup>See <https://abcnews.go.com/Lifestyle/experts-warn-parents-snapchat-hook-teens-streaks/story?id=48778296>

content that its users can incorporate in the pictures and videos they post on Snapchat.

115. These images, Lenses, and licensed audio and video content supplied and created by Snapchat frequently make a material contribution to the creation or development of the user's Snapchat posts. Indeed, in many cases, the *only* content in a user's Snapchat post are images, Lenses, and licensed audio and video content supplied and created by Snapchat. When users incorporate images, Lenses, music, audio, and video content supplied by Snapchat posts, Snapchat makes a material contribution to the creation and/or development of their Snapchat postings and becomes a co-publisher of such content. When malign users incorporate images, Lenses, music, audio, and video content supplied by Snapchat to their posts, this enhances the psychic harm and defamatory sting that minor users experience from third-party postings on Defendant's platform.

116. Moreover, Snap contracts for legal rights in this third-party content, such that it is not "third-party content" at all. Snap's current Terms of Service grant Snap several, sweeping sets of legal rights, from licensing to ownership, as follows (and for example only as there are several provisions in Snap's Terms of Service that address legal rights over user content, comments, and other usage and activities),

### **3. Rights You Grant Us**

Many of our Services let you create, upload, post, send, receive, and store content. When you do that, you retain whatever ownership rights in that content you had to begin with. But you grant us a license to use that content. How broad that license is depends on which Services you use and the Settings you have selected.

For all content you submit to the Services, you grant Snap and our affiliates a worldwide, royalty-free, sublicensable, and transferable license to host, store, cache, use, display, reproduce, modify, adapt, edit, publish, analyze, transmit, and distribute that content. This license is for the purpose of operating, developing, providing, promoting, and improving the Services and researching and developing new ones. This license includes a right for us to make your content available to, and pass these rights along to, service providers with whom we have contractual relationships related to the provision of the Services, solely for the purpose of providing such Services.

117. Snap directly profits from the videos and pictures and other content its users create

in collaboration with Snap, as described above.

118. Snap knows that it is harming teens yet consistently opts for prioritization of profit over the health and well-being of its teen users—that is, the millions of teen users who continue to use its inherently dangerous and defective social media product every, single day.

### C. TikTok Background

119. TikTok is a video sharing social media application where users create, share, and view short video clips. Known in China as Douyin, TikTok hosts a variety of short-form user videos, from genres like pranks, stunts, tricks, jokes, dance, and entertainment with durations from 15 seconds to ten minutes. TikTok is the international version of Douyin, which was originally released in the Chinese market in September 2016. In 2017, TikTok was launched for iOS and Android in most markets outside of mainland China; however, it became available worldwide only after merging with another Chinese social media service, Musical.ly, on August 2, 2018.

120. TikTok has been downloaded more than 130 times in the U.S. and it was ranked by Cloudflare as the most popular website of 2021. “TikTok was the world’s most-visited website in 2021, overtaking YouTube in US watch time and Facebook in app downloads for the first time.”<sup>16</sup>

121. Users on TikTok who open the TikTok application are automatically shown an endless stream of videos selected by an algorithm developed by TikTok to show content on the “for you” based upon the user’s demographics, likes, and prior activity on the app.

122. TikTok is like Meta and Snap in that it has designed its algorithms to addict users and cause them to spend as much time on the application as possible through advanced analytics that create a variable reward system tailored to user’s viewing habits and interests.

123. There are four main goals for TikTok’s algorithm: which the company translates as “user value,” “long-term user value,” “creator value,” and “platform value.”

124. An internal TikTok document was leaked, which document is titled “TikTok Algo

---

<sup>16</sup> Emily Baker-White, *Inside Project Texas, TikTok’s Big Answer To US Lawmakers’ China Fears*, BuzzFeed, Mar. 10, 2022, <https://www.buzzfeednews.com/article/emilybakerwhite/tiktok-project-texas-bytedance-user-data>

101.” On information it was created by TikTok’s engineering team in Beijing and offers details about both the app’s mathematical core and insight into the company’s understanding of human nature. The document explains that in the pursuit of the company’s “ultimate goal” of adding daily active users, it has chosen to optimize for two closely related metrics in the stream of videos it serves: “retention” — that is, whether a user comes back — and “time spent.” The document offers a rough equation for how videos are scored, in which a prediction driven by machine learning and actual user behavior are summed up for each of three bits of data: likes, comments and playtime, as well as an indication that the video has been played.

125. A recent Wall Street Journal report revealed how TikTok relies heavily on how much time users spend watching each video to steer them toward more videos that will keep them scrolling, and that process can sometimes lead young viewers down dangerous rabbit holes, and toward content that promotes suicide or self-harm.

126. Another article, by the New York Times, explained how TikTok markets itself as an “artificial intelligence company.” “The most obvious clue is right there when you open the app: the first thing you see isn’t a feed of your friends, but a page called ‘For You.’ It’s an algorithmic feed based on videos you’ve interacted with, or even just watched. It never runs out of material. It is not, unless you train it to be, full of people you know, or things you’ve explicitly told it you want to see. It’s full of things that you seem to have demonstrated you want to watch, no matter what you actually say you want to watch ... Imagine a version of Facebook that was able to fill your feed before you’d friended a single person. That’s TikTok.”<sup>17</sup>

127. TikTok’s algorithm also, often works in concert with Meta’s. For example, a teen may first learn about a harmful topic through Meta’s algorithm, which potential harm is then identified by TikTok’s algorithm, based on any number of unknown factors, and the TikTok product will amplify and promote that same harm through a virtual series of how-to videos. These are inherently dangerous and harmful product features, particularly when aimed at children.

---

<sup>17</sup> John Herrman, *How TikTok is Rewriting the World*, N.Y. Times, Mar. 10, 2019, available at <https://www.nytimes.com/2019/03/10/style/what-is-tik-tok.html>

128. TikTok also features and promotes various “challenges” where users film themselves engaging in behavior that mimics and “one ups” other users posting videos related to a particular challenge. TikTok promotes users creating and posting videos of challenges identified by a system of hashtags that are promoted within TikTok’s search feature.

129. TikTok’s app and algorithm have created an environment in which TikTok “challenges” are widely promoted and result in maximum user engagement and participation, thus financially benefitting Defendants. At the same time TikTok “challenges” involve users filming themselves engaging in behavior that mimics and often times “one-ups” other users posting videos performing the same or similar conduct, and these TikTok “challenges” routinely involve dangerous or risky conduct.

130. TikTok’s algorithm presents these often-dangerous “challenges” to users on their FYP and encourages users to create, share, and participate in the “challenge.”

131. These are just some examples of how TikTok operates its product to generate profit, at the expense of the health and well-being of its users, particularly its child and teen users, and how it fosters and promotes user addiction to its product.

132. Until mid 2021, TikTok also and by default made all users profiles “public,” meaning that strangers, often adults, could view and message underage users of the TikTok app. This also meant that those strangers could then contact children directly, as happened in this case.

133. But TikTok has also developed artificial intelligence technology that detects adult users of TikTok who send sexually explicit content to children and receive sexually explicit images from children. This technology furnishes TikTok with actual knowledge that a significant number of minor users of TikTok are solicited to send and actually do send sexually explicit photos and videos of themselves to adult users in exchange for consideration in violation of 18 U.S.C. § 1591(a)(1)–(2). Yet, like Snap and Meta, TikTok uses this technology selectively and only when it is to the benefit of TikTok, enabling harms through its social media products in the interest of engagement.

134. Like Meta and Snap, TikTok also sends push notifications and emails to encourage

addictive behavior and to increase use of their TikTok product. TikTok’s communications are triggered and based upon information TikTok collects from and about its users, and TikTok “pushes” these communications to teen users in excessive numbers and disruptive times of day. These notifications are specifically designed to, and do, prompt them to open TikTok and view the content TikTok selected, increasing sessions, and resulting in greater profits to TikTok. Even the format of these notifications has been designed to pull users back on to the social media platform—irrespective of a user’s health or wellbeing.

135. TikTok markets itself as a family friendly social media application, and markets to children and teens.

136. TikTok exclusively controls and operates the TikTok platform for profit, which like Instagram and Snapchat, creates advertising revenue through maximizing the amount of time users spend on their platforms. Accordingly, while TikTok purports to have a minimum age requirement of 13-years-old, it does little to verify user age or enforce its age limitations despite knowledge that underage use is widespread.

137. In fact, underage TikTok users will often post videos of themselves in which they clearly are not old enough to be using the TikTok social media product. On information and belief, TikTok’s sophisticated algorithms can identify when a user has crooked teeth or a crack in their bedroom wall, so there is little question that those same algorithms can identify underage children in posted videos. But also, TikTok has actual knowledge of underage users. For example, in July 2020, TikTok reported that more than a third of its 49 million daily users in the United States were 14 years old or younger. And while some of those users were 13 or 14, at least one former employee reported that TikTok had actual knowledge of children even younger based on videos posted on the TikTok platform – yet failed to promptly take down those videos or close those accounts.<sup>18</sup> In fact, TikTok regularly knows or should know of underage users with accounts and who post videos

---

<sup>18</sup> Raymond Zhong & Sheera Frenkel, *A Third of TikTok’s U.S. Users May Be 14 or Under, Raising Safety Questions*, N.Y. Times, Aug. 14, 2020, available at <https://www.nytimes.com/2020/08/14/technology/tiktok-underage-users-ffc.html>

on its platform, whether because of its algorithms, viewing by TikTok employees, and/or flagging by other TikTok users. In many such instances, TikTok not suspend the account, require age verification, or notify the underage user's parents of such prohibited use.

138. TikTok does not seek parental consent for underage users or provide warnings or adequate controls that would allow parents to monitor and limit the use of TikTok by their children. TikTok does not verify user age, enabling and encouraging teens and children to open TikTok accounts, providing any age they want, and without parental knowledge or consent. TikTok does not include the deliberately addictive design of its product, which is addictive and did addict Emma Claire, to the point where she hid from her parents her usage of the TikTok social media product.

139. Further, based on TikTok data leaked to the New York Times, internal TikTok documents show that the number of daily U.S. users in July of 2020 estimated by TikTok to be 14 or young—18 million—was almost as large as the number of over-14 users, around 20 million. While the rest of TikTok's U.S. users were classified as being "of unknown age."<sup>19</sup>

140. TikTok also does not rely on users' self-reported age to categorize them, and knows when it has underage users engaged in harmful activities on its platform. Like Meta, TikTok has algorithms through which it creates estimated or approximate age for its users, including facial recognition algorithms that scrutinize profile pictures and videos, as well as other methods through which it can estimate age with reasonable certainty. TikTok knows that users under the age of 13 are using its social media product, including to post videos of themselves, which videos are public by default and result in harm to these underage users.<sup>20</sup>

141. Like Meta and Snap, TikTok has tried to boost engagement and keep young users hooked to its social media product by any means necessary.

142. TikTok has developed images and memes to enact images for users to decorate the videos they post. TikTok has also developed memes and other images for users to apply to images they post on TikTok. TikTok also has acquired publication rights to music that its users can

---

<sup>19</sup> *Id.*

<sup>20</sup> *Id.*

incorporate in the pictures and videos they post on TikTok. When users incorporate images, memes and music supplied by TikTok into their postings, TikTok becomes a co-publisher of such content. A TikTok user who incorporates images, memes and musical content supplied by TikTok into their posts is functionally equivalent to a novelist who incorporates illustrations into her story. TikTok can no longer characterize the images, memes, and musical content it supplies to its users as third-party content as the novelist can disclaim responsibility for illustrations contained in her book.

143. And like Snap and Meta, TikTok contracts for legal rights to this third-party content, such that it is not “third-party content” at all. TikTok’s current Terms of Service grant TikTok sweeping sets of rights as follows, and for example only,

You or the owner of your User Content still own the copyright in User Content sent to us, but by submitting User Content via the Services, you hereby grant us an unconditional irrevocable, non-exclusive, royalty-free, fully transferable, perpetual worldwide licence to use, modify, adapt, reproduce, make derivative works of, publish and/or transmit, and/or distribute and to authorise other users of the Services and other third-parties to view, access, use, download, modify, adapt, reproduce, make derivative works of, publish and/or transmit your User Content in any format and on any platform, either now known or hereinafter invented.

144. TikTok directly profits from the videos and pictures and other content its users create in collaboration with TikTok, as described above.

145. TikTok knows that it is harming teens yet consistently opts for prioritization of profit over the health and well-being of its teen users—that is, the millions of teen users who continue to use its inherently dangerous and defective social media product every, single day.

#### **D. Defendants’ Applications Are Products**

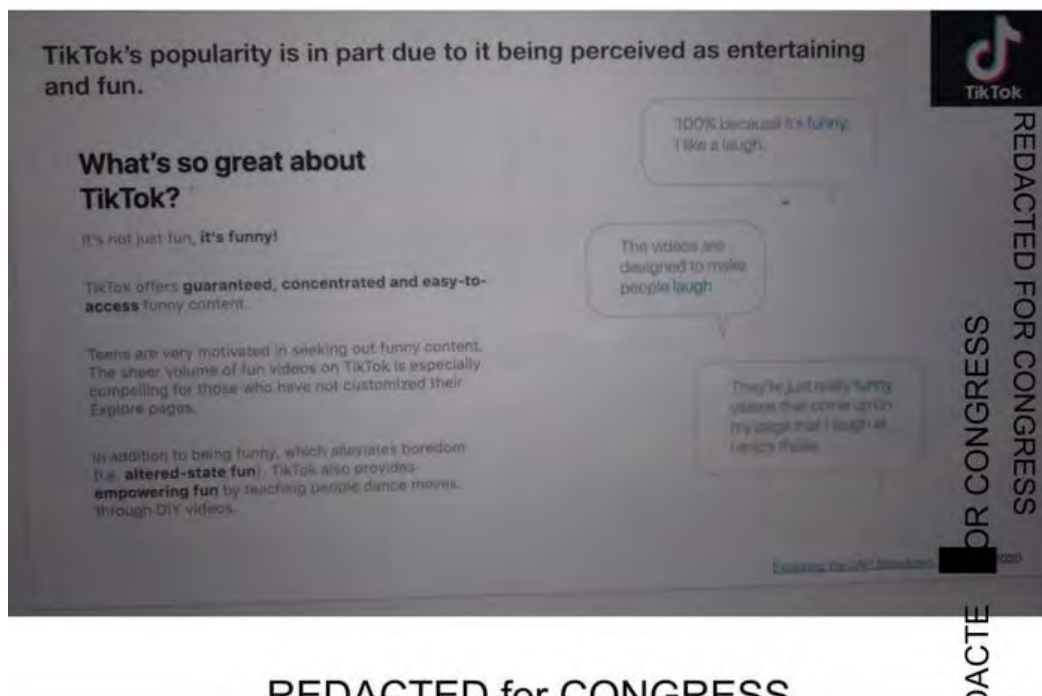

146. There is no dispute that the above-described social media products are designed and manufactured by Defendants, and further, Defendants refer to them as such.

147. These products are designed to be used by minors and are actively marketed to teens *and tweens* across the United States.

148. Defendants’ user terms and federal law prohibit use of these social media products

by any person under the age of 13. Regardless, Defendants know that children under 13 are using their products, and actively study and market to that population.

149. Defendants' products are designed to be used by minors and are actively marketed to minors across the United States. Defendants market to minors through their own marketing efforts and design, and through their approval and permission to advertisers who create and target ads to young users. Meta documents establish that Meta spends millions of dollars researching, analyzing, and experimenting with young children to find ways to make its product more appealing and addictive to these age groups, as these age groups are seen as the key to Meta's long-term profitability and market dominance. But also, Meta documents establish that it is not the only one, and that other social media companies, including Meta's co-defendants in this case, invest heavily to appeal to teens and underage users. *See, e.g.*, <https://www.businessinsider.com/leaked-docs-facebook-papers-instagram-competition-tiktok-youtube-snapchat-2021-12?op=1#whats-so-great-about-tiktok-one-slide-said-2> (quoting from Facebook Papers that address the reasons why teens love Snapchat and TikTok).

use, including failure to verify age and identification and allowing and encouraging multiple accounts.

151. Defendants have designed their products in a manner that allows and/or does not prevent such use to increase user engagement and, thereby, increase their own profits.

**E. Defendants’ Business Model is Based on Maximizing User Screen Time and Defendants Know That their Products are Addictive**

152. Defendants advertise their products as “free,” because they do not charge their users for downloading or using their products. What many users do not know is that, in fact, Defendants make a profit by finding unique and increasingly dangerous ways to capture user attention and target advertisements to their users. Defendants receive revenue from advertisers who pay a premium to target advertisements to specific demographic groups of users in the applications. Defendants also receive revenue from selling their users’ data to third parties.

153. The amount of revenue Defendants receive is based upon the amount of time and level of user engagement on their platforms, which directly correlates with the number of advertisements that can be shown to each user.

154. Defendants use unknown and changing rewards that are designed to prompt users who consume their social media products in excessive and dangerous ways. Defendants know, or in the exercise of ordinary care should know, that their designs have created extreme and addictive usage by their minor users, and Defendants knowingly or purposefully designed its products to encourage such addictive behaviors. For example, all the achievements and trophies in Snapchat are unknown to users. The Company has stated that “[y]ou don’t even know about the achievement until you unlock it.” This design conforms to well-established principles of operant conditioning wherein intermittent reinforcement provides the most reliable tool to maintain a desired behavior over time.

155. This design is akin to a slot machine but marketed toward minor users who are even more susceptible than gambling addicts to the variable reward and reminder system designed by Snapchat. The system is designed to reward increasingly extreme behavior because users are not

actually aware of what action will unlock the next award.

156. Instagram, like Snapchat and TikTok, is designed around a series of features that do not add to the communication utility of the application, but instead seek to exploit minor users' susceptibility to persuasive design and unlimited accumulation of unpredictable and uncertain rewards, including "likes" and "followers." In the hands of children, this design is unreasonably dangerous to the mental well-being of underage users' developing minds. This design proximately caused Emma Claire's death.

157. According to industry insiders, Defendants have employed thousands of psychologists and engineers to help make their products maximally addictive. For example, Instagram's "pull to refresh" is based on how slot machines operate. It creates an endless feed, designed to manipulate brain chemistry and prevent natural end points that would otherwise encourage users to move on to other activities.

158. Defendants do not warn users of the addictive design of their product. On the contrary, Defendants actively try to conceal the dangerous and addictive nature of their products, lulling users and parents into a false sense of security. This includes consistently playing down their products' negative effects on teens in public statements and advertising, making false or materially misleading statements concerning product safety, and refusing to make their research public or available to academics or lawmakers who have asked for it.

159. Defendants have repeatedly represented to the public and governments around the world that their products are safe and not addictive. Even now, TikTok represents in its community guidelines that its priority is "safety, diversity, inclusion, and authenticity."<sup>21</sup> Snap's Terms of Service claim "We try hard to keep our Services a safe place for all users."<sup>22</sup>

160. Again, the amount of revenue Defendants receive is based upon the amount of time and user engagement on their platforms, which directly correlates with the number of advertisements that can be shown to each user. In short, Defendants opted for user engagement

---

<sup>21</sup> <https://www.tiktok.com/community-guidelines?lang=en>

<sup>22</sup> See Snap, Inc. Terms of Service, ¶ 9.

over the truth and user safety.

161. Defendants’ social media products are built around a series of design features that do not add to the communication and communication utility of the applications, but instead seek to exploit users’ susceptibility to persuasive design and unlimited accumulation of unpredictable and uncertain rewards (including things like “likes” and “followers” and “views” and “streaks” and “trophies”). This design is unreasonably dangerous to the mental well-being of underage users’ developing minds, and these social media companies know it.

162. Defendants know that their products are addictive, and that millions of teen users want to stop using them but cannot.

163. Defendants engineer their products to keep users, and particularly young users, engaged longer and coming back for more. This is referred to as “engineered addiction,” and examples include features like bottomless scrolling, tagging, notifications, and live stories.

164. Defendants spend billions of dollars marketing their products to minors, and have deliberately traded in user harm for the sake of their already astronomical revenue stream.

**F. Defendants Have Designed Complex Algorithms to Addict Teen Users and Their Business Models Are Based on Maximizing User Screen Time**

165. Defendants have intentionally designed their products to maximize users’ screen time, using complex algorithms designed to exploit human psychology and driven by the most advanced computer algorithms and artificial intelligence available to three of the largest technology companies in the world.

166. Defendants’ algorithms select content for minor users not based on what they anticipate the user will prefer or to enhance their social media experience, but rather for the express purpose of habituating users to the Defendants’ social media products. Defendants’ algorithms do not provide a neutral platform but rather specify and prompt the type of content to be submitted and determine particular types of content its algorithms promote.

167. Defendants designed and have progressively modified their products to promote problematic and excessive use that they know is indicative of addictive and self-destructive use.

168. One of these features—present in Snapchat, Instagram, and TikTok—is the use of complex algorithms to select and promote content that is provided to users in an unlimited and never-ending “feed.” Defendants are well aware that algorithm-controlled feeds promote unlimited “scrolling”—a type of use those studies have identified as detrimental to users’ mental health—however, this type of use allows Defendants to display more advertisements and obtain more revenue from each individual user.

169. Defendants’ algorithm-controlled product features are designed to promote content most likely to increase user engagement, which often means content that Defendants know to be harmful to their users. This is content that users might otherwise never see but for Defendant’s sorting, prioritizing, and/or affirmative pushing of such content to their accounts.

170. In the words of one, high-level departing Meta employee,

In September 2006, Facebook launched News Feed. In October 2009, Facebook switched from chronological sorting to an algorithmic ranking. 10 years later, in July 2019, Sen. Josh Hawley introduced a bill to the US Senate that would ban features in app feeds, such as infinite scroll.

The response in 2006 was largely positive; the response in 2009 was negative from a vocal minority, but still largely positive; the response in 2019 was largely “lol, wut?” If I had to guess, the response to government regulation around engagement centric information feeds in 2026 will be “Omg finally”.

“Why We Build Feeds” (October 4, 2019), at p. 1.<sup>23</sup>

171. The addictive nature of Defendants products and the complex and psychologically manipulative design of their algorithms is unknown to ordinary consumers, particularly minors.

172. Defendants go to significant lengths to prevent transparency, including posing as a “free” social media platform, burying advertisements in personalized content, and making public statements about the safety of their products that simply are not true.

---

<sup>23</sup> [https://www.documentcloud.org/documents/21600853-tier1\\_rank\\_exp\\_1019](https://www.documentcloud.org/documents/21600853-tier1_rank_exp_1019)

173. Defendants also have developed unique product features designed to limit, and have in other ways limited, parents' ability to monitor and prevent problematic use by their children.

174. Defendants' algorithms adapt to promote whatever content will trigger minor users' engagement and maximize their screen time. Defendants' algorithm designs do not distinguish, rank, discriminate, or prioritize between particular content based on whether it is helpful or harmful to the psychic well-being of their minor users. Once a minor user engages with abusive, harmful, or destructive content, Defendants' algorithms will direct the minor user to content that is progressively more abusive, harmful, and destructive to maximize the user's screen time.

175. Defendants' algorithms are not simply tools meant to facilitate the communication and content of others but are content in and of themselves. Defendants' algorithms do not function like traditional search engines that select particular content for users based on user inputs; they direct minor users to content based on far more than the individual users' viewing history. Defendants' algorithms make recommendations not simply based on minor users' voluntary actions but also the demographic information and social media activity of the users' friends, followers, and cohorts. The user data that Defendants' algorithms use to select content therefore encompasses far more information than voluntarily furnished by the particular user and include private information about the user that Defendants discover through undisclosed surveillance of their behavior both online and offline.

176. These addiction-driven algorithms are designed to be content neutral. They adapt to the social media activity of individual users to promote *whatever* content will trigger a particular user's interest and maximize their screen time. That is, prior to the point when Defendants have addicted their users and are then able to influence user preferences, their algorithm designs do not distinguish, rank, discriminate, or prioritize between types of content. For example, if the algorithm can increase User One engagement with elephants and User Two engagement with moonbeams, then Defendants' algorithm design will promote elephant content to User One and moonbeam content to User Two. These types of algorithms are solely quantitative devices and make no qualitative distinctions between the nature and type of content they promote to users – as

long as those promotions increase user engagement.

**B. Minor Users’ Incomplete Brain Development Renders Them Particularly Susceptible to Manipulative Algorithms with Diminished Capacity to Eschew Self-Destructive Behaviors and Less Resiliency to Overcome Negative Social Media Influences**

177. The human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotional regulation, and impulse control.

178. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature.

179. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood.

180. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and for mature, considered decision-making is still developing during

adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

181. The algorithms in Defendants' social media products are designed to exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, they experience enhanced dopamine responses to stimuli on Defendants' social media platforms and are therefore much more likely to become addicted to Defendants' products; exercise poor judgment in their social media activity; and act impulsively in response to negative social media encounters. Defendants also know, or in the exercise of reasonable care should know, that minor users of their social media products are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants knowingly designed their social media products to be addictive to minor users and failed to include in their product design any safeguards to account for and ameliorate the psychosocial immaturity of their minor users.

#### **G. Defendants Misrepresent the Addictive Design and Effects of Their Social Media Product**

182. During the relevant time period, Defendants stated in public comments that their products are not addictive and were not designed to be addictive. Defendants knew or should have known that those statements were untrue.

183. During the relevant time period, Defendants advertised via commercials and/or third parties that their products were fun and safe to use, and that Defendants employed their technologies to ensure safe and age-appropriate experiences. Defendants knew or should have known that those statements were untrue.

184. Neither Meta, TikTok, nor Snapchat warned users or their parents of the addictive and mentally harmful effects that the use of their products was known to cause amongst minor users. On the contrary, Defendants have gone to significant lengths to conceal and/or avoid

disclosure as to the true nature of their products.

**H. Plaintiffs Expressly Disclaim Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties**

185. Plaintiffs seek to hold Defendants accountable for their own alleged acts and omissions. Plaintiffs’ claims arise from Defendants’ status as designers and marketers of dangerously defective social media product, as well as Defendants’ own statements and actions, not as the speaker or publisher of third-party content.

186. Defendants’ have designed their products to be addictive. For example, Defendants have developed and modified product features like the continuous loop feed and push notifications, to incentivize users to stay on the product as long as possible and to convince users to log back on. Defendants even calculate the most effective time to send such notifications, which in the case of teen and tween users often means in the middle of the night and/or during school hours. Essentially, the times they are least likely to have access to Defendants’ social media products, which also—as Defendants know—are the times that their health and well-being necessitate them not being on Defendants’ social media product. Defendants’ products are designed to and do addict users on a content neutral basis.

187. The structure of these social media products and the technologies Defendants’ design and utilize are, standing alone, harmful to users and irrespective of content. For example, a primary purpose of Defendants’ algorithm designs is to determine individual user preferences first so that Defendants can then influence user behavior and choices second—which is particularly dangerous in the case of teens.

188. In the case of Meta, for example, Meta uses its product both to “experiment” on and test its users in ways heretofore unimagined, but also, it seeks to control user behavior through product features and capabilities and for the specific purpose of acquiring and retaining users. Defendants Snap and TikTok likewise seek to control user behavior through product features and capabilities and for the specific purpose of acquiring and retaining users.

189. On a content neutral basis, the manipulation and control these Defendants knowingly wield over their users daily is profoundly dangerous.

190. Defendants are responsible for these harms. These harms are caused by Defendants' designs and design-decisions, and not any single incident of third-party content.

191. Yet Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media products. These dangers are unknown to ordinary consumers but are known to Defendants. Moreover, these dangers do not arise from third-party content contained on Defendants' social media platforms. This lawsuit does not involve a suit against a web browser provider for making available third-party content. To the contrary, Defendants,

- a. Design and constantly re-design their social media products to attract and addict teens and children, their "priority" user group.
- b. Design and continue to operate their social media products to ensure that teens and children can obtain unfettered access, even over parental objection.
- c. Know when teens and children are opening multiple accounts and when they are accessing their products excessively and in the middle of the night.
- d. Work with advertisers and influencers to create and approve harmful content and provide direct access to teens and children – a user population Defendants know to be vulnerable.
- e. Operate and provide the above social media products with the single-minded goal of increasing user engagement, including but not limited to things like maintaining harmful social comparison features and approving product programming that promotes harmful content over clear dangers to user safety.

192. While it may be a third party creates a particular piece of harmful content, the teens and children harmed by Defendants' social media products are not being harmed by a single piece of harmful content. They are being harmed by Defendants' products, programming, and decisions to expose teens and children to harmful product features and to show teens and children a constant

barrage of harmful content to obtain more advertising revenue and increase engagement.

193. Children do not open social media accounts in the hopes of become addicted. Nonetheless, such children *do* become addicted, leading them to engage in foreseeable addict behaviors, such as lying to their parents, hiding their use of Instagram, losing control, and becoming irritable, depressed, anxious, even desperate, when access is denied, and hyper-vigilance to avoid detection. These and other behaviors can and do result in serious harm to Defendants' minor users and resulted in serious harm to Emma Claire and her parents.

194. Children do not start using social media in the hopes of being exposed to product features that cause harm to them. Yet the use of Instagram, Snapchat, and TikTok involves harmful forms of social comparison and inevitably pushes such children towards harmful "rabbit holes," causing anxiety, depression, eating disorders, and self-harm—harms at least some of these Defendants acknowledge in internal documents. Defendants' products caused some of these harms to Emma Claire and her parents.

195. The harms at issue in this case do not relate to or arise from third party content, but rather, Defendants' product features and designs, including algorithms and other technology that (a) addicts minor users to their products; (b) amplify and promote harmful social comparison through product features; (c) affirmatively select and promote harmful content to vulnerable users based on its individualized demographic data and social media activity; and (d) put minor users in contact with dangerous adult predators and otherwise expose to them to seemingly unstoppable unwanted interactions from persons not on their friend list or equivalent. Indeed, the foregoing are merely examples of the kinds of harms at issue in this case.

196. Defendants' products are addictive on a content neutral basis. Defendants design and operate their social media products in a manner intended to and that does change behavior and addict users, including through a natural selection process that does not depend on or require any specific type of third-party content, as well as mechanisms and features meant to release dopamine. Defendants deliberately addict teen users and the harms resulting from these addictions are foreseeable, even known, to Defendants.

197. Defendants have designed other product features for the purpose of encouraging and assisting children in evasion of parental oversight, protection, and consent, which features are wholly unnecessary to the operation of Defendants' product. This includes but is not limited to Defendants' wholesale failure to check identification or verify validity of user-provided email credentials, while simultaneously implementing product design features (such as easier ability to switch between accounts, in the case of Meta) meant to ensure easy access by children and teens, irrespective of parental consent. Likewise, Defendants—even those who claim to permit only one account—know that teen users are opening multiple accounts and fail to prevent such abuses.

198. Defendants also promote, encourage, and/or otherwise contribute to the development of harmful content. This Complaint has quoted from just a few of the thousands of Meta documents disclosed by the Facebook whistleblower, which establish this, and Plaintiffs anticipate finding the same types of evidence in discovery with TikTok and Snap. One of biggest hurdles to discovery of these claims and the harms Defendants have caused is that none of these defendants have ever been willingly transparent or cooperate regarding disclosure of their product designs and operations. In this manner too these defendants have actively concealed such harms.

199. Defendants also approve ads that contain harmful content, for example, and as discussed at the Senate hearing held on October 5, 2021 regarding Meta,<sup>24</sup>

**Senator Mike Lee: (01:21:34)**

Now, since that exchange happened last week, there are a number of individuals and groups, including a group called the Technology Transparency Project or TTP, that have indicated that that part of her testimony was inaccurate. That it was false. TTP noted that TTP had conducted an experiment just last month, and their goal was to run a series of ads that would be targeted to children ages 13 to 17, to users in the United States. Now, I want to emphasize that TTP didn't end up running these ads. They stopped them from being distributed to users, but Facebook did in fact approve them. As I understand it, Facebook approved them for an audience of up to 9.1 million users, all of whom were teens.

**Senator Mike Lee: (01:22:31)**

I brought a few of these to show you today. This is the first one I wanted to showcase. This first one has a colorful graphic encouraging kids to, "Throw a Skittles party like no other," which as the graphic indicates, and as the slang jargon also independently suggests, this involves kids getting together randomly to abuse prescription drugs. The second graphic displays an ana tip. That is a tip specifically designed to encourage and promote anorexia. It's on there. Now the language, the ana tip itself independently promotes that. The ad also promotes it in so far as it was suggesting. These are images you ought to look at when you need motivation to be more anorexic, I guess you could say. Now the third one invites children to find their partner online and to make a love connection. "You look lonely. Find your partner now to make a love connection."

200. In other words, Defendant Meta approves advertisements "designed to encourage and promote anorexia" and encouraging children to abuse prescription or illegal drugs, which ads Meta then targets specifically at children in exchange for payment from the advertisers. On information and belief, Snapchat and TikTok do as well.

201. Defendants utilize private information of their minor users to "precisely target [them] with content and recommendations, assessing what will provoke a reaction," including encouragement of "destructive and dangerous behaviors." Again, Defendants specifically select

<sup>24</sup> <https://www.rev.com/blog/transcripts/facebook-whistleblower-frances-haugen-testifies-on-children-social-media-use-full-senate-hearing-transcript> ("October 5, 2021, Senate Hearing Transcript").

and push this harmful content, for which they are then paid, and do so both for that direct profit and also to increase user engagement, resulting in more profits down the road. “That’s how [Defendants] can push teens into darker and darker places.”<sup>25</sup> Defendants know that their products can push children “all the way from just something innocent like healthy recipes to anorexia promoting content over a very short period of time.”<sup>26</sup> Defendants know that their products the content they are encouraging and helping to create is harmful to young users and choose “profits over safety”<sup>27</sup> any way.

202. None of Plaintiffs’ claims rely on treating Defendants as the publisher or speaker of any third party’s words or content. Plaintiffs’ claims seek to hold these Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any good faith attempts on the part of these Defendants to restrict access to objectionable content.

203. Plaintiffs are not alleging that Defendants are liable for what the third parties said, but for what Defendants did.

204. None of Plaintiffs’ Claims for Relief set forth herein treat Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiffs seek to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from anticipate use of their products. Defendants could manifestly fulfill their legal duty to design a reasonably safe social product and furnish adequate warnings of foreseeable dangers arising out of the use of their products without altering, deleting, or modifying the content of a single third-party post or communication. Some examples include,

- a. Not using their addictive and inherently dangerous algorithm and similar technologies in connection with any account held by a user under the age of 18.
- b. Not permitting any targeted advertisements to any user under the age of 18.
- c. Prioritizing internally their removal of harmful content (content their systems

---

<sup>25</sup> *Id.*

<sup>26</sup> October 5, 2021, Senate Hearing Transcript, Ms. Francis Haugen at 00:37:34.

<sup>27</sup> *Id.* at 02:47:07.

are promoting and amplifying) over the risk of losing some user engagement.

- d. Requiring identification upon opening of a new account, requiring parental consent for users under the age of 18 (which Snap and Tiktok currently claim to do but do not actually enforce in any way), and restricting users under the age of 18 to a single account.
- e. Requiring verification by email when a user opens a new account. Not requiring verification allows underage users to access these social media products and does not stop bad actors.
- f. Immediate suspension of accounts where Defendants have reason to know that the user is under the age of 13, including when the user declares that they are under the age of 13 in their bio or comments or chats and/or messages with any third party and where Defendants can determine an “estimated” age of under 13 based on other information they collect and/or have in their possession (including, for example, posted videos that clearly feature children under 13); and not allowing the account to resume until the user provides proof of age and identity and/or parental consent.
- g. Suspension of accounts and, in some cases, user bans, where Defendants have reason to know that the user is over the age of 18, but where they are providing information to suggest that they are minors and/or are representing themselves as minors to other users; and not allowing the account to resume until the user provides proof of age and identity.
- h. Removing social comparison features and/or hiding those features to reduce their harmful impact on teen users.
- i. Instituting advertising safeguards to ensure that Defendants are not profiting directly from or otherwise pushing or endorsing harmful advertising content, and removing advertising targeting tools so that advertisers cannot harm vulnerable user groups by aiming harmful advertisements at them.

- j. Requiring that all teen user accounts be set to private and not allowing any user under the age of 18 to change user settings to public.
- k. Removing all friend and group and content recommendation systems that involve teen users in any way (so, not recommending to teen users, but also, not recommending teen users to adults) and not permitting direct messaging, snaps, or other forms of direct communication with any user under the age of 18 not already on the other user's friend list.

205. These are just some examples, all of which could be accomplished easily and/or at commercially reasonable cost. Defendants know that they can make these change and, in many cases, have discussed these or similar changes internally. However, they have not instituted these types of safety features because they know that doing so would impact their astronomical revenue.

**I. Emma Claire Gill Died of Suicide Proximately Caused by Defendants' Social Media Products**

206. Emma Claire Gill was born on September 2, 2004, in Fairhope, Alabama. Emma Claire was a happy child, outgoing, involved, lots of friends and a supportive family.

207. In 2011, Plaintiff Ryan Gill started working on a pipeline, which caused their family to move around for a few years. They moved to Louisiana, Oklahoma, Ohio, Louisiana again, New Mexico, then back to Louisiana for the final time. Darla Gill would best describe Emma Claire as someone who *made* a stranger. Even though her family had to move through part of Emma Claire's childhood, Emma Claire made the effort to keep in touch with each of her friends. She nurtured and grew those friendships, even when several states separated them.

208. Emma Claire loved basketball, hunting, Alabama football, and beauty pageants. She wasn't sure what she wanted to do in life, as everything interested her. When she was younger,

she said she wanted to be a singer, a dancer, or an actress. In high school she read a Ben Carson book and decided that she wanted to be a neurosurgeon; then a nurse; and when she realized how much math was involved in nursing, she told her mother that she was going to be a phlebotomist instead. Each time Emma changed her mind, Darla told her she could be anything she wanted, as long as she loved and served the Lord and others.

209. In 2015, Emma Claire got her first cell phone.

210. She was 10 years old, living in Ohio, and had joined her school's "Geek Squad," which required her to stay late after school. Darla and Ryan wanted her to be able to reach them if needed. Her parents did not, however, consent or agree to social media use, nor did Emma Claire have access to social media as far as her parents knew.

211. Plaintiffs purchased a pre-paid Android phone and understood that the device was limited to a certain number of minutes, which Darla and Ryan monitored and paid for on a pay-as-you-go basis. Plaintiffs do not know whether Emma Claire was able to access social media through that device. But regardless, they also made clear to Emma Claire that she needed to use any phone responsibly—phones were for safety, not social media. They had rules that devices were not to be used at night or kept in the bedroom, and they kept all access codes and would go through Emma Claire's cell phone occasionally to make sure everything was okay.

212. What Plaintiffs did not know is that Defendants make sure that underage children can access their social media products, including by marketing to children, failing to verify age or identity (even when the children openly admitted to being underage on their public profile and/or in posts and comments which, upon information and belief, Emma Claire would have done), and permitting opening of multiple accounts. It was understood among children that Meta wouldn't close your account for being under 13. You just had to say you were 13 when opening an account and could then tell people your real age. In fact, this is something many kids still do. It also was understood among children that Meta did not object to kids using more than one account, which made it easier to hide more personal content and the existence of secondary accounts from parents and family—often referred to as a SPAM account or, in Instagram's case, a FINSTA (short for

“fake Instagram”).

213. Defendants designed Instagram, TikTok, and Snapchat to frustrate and prevent parents like Darla and Ryan Gill from exercising their rights and duties as parents to monitor and limit their child's use of their social media products. Plaintiffs were not aware when Emma Claire's social media usage started, nor did they ultimately know which products she used or how many accounts she opened without their knowledge or consent.

214. Plaintiffs cannot be certain as to what social media accounts Emma Claire opened or when, because of how Defendants design their products – that is, to evade parental protection and consent. However, they do not recall having any knowledge of any social media accounts in 2015 and believe that the only account they approved for Emma Claire’s use at or around that time was Pinterest.

215. Darla Gill had her own Instagram but rarely used it and recalls Emma opening her first Instagram account sometime in 2016, while others in the family recall learning about her first Instagram account sometime in 2017. In fact, Emma Claire aunt opened an Instagram account in December of 2017 specifically because she became aware that Emma Claire had an Instagram account and wanted to be able to check in on her.

216. In 2018 and 2019, Emma Claire also asked her parents if she could open a Snapchat account and, at some point, she asked about a TikTok account. They said no to these other social media products and continued saying no for a couple of years and until Emma was 16. Plaintiffs felt that they simply did not know enough about these other products to be comfortable with their daughter using them, in contrast with the Meta social media products, which they felt they understood a little better based on Meta's years of advertising and statements to the public that those products are safe for general consumption.

217. Emma's Claire's Instagram use coincided with a gradual and subtle decline in her mental health, including mild anxiety and an increasing inability to focus on school or at home. Like many kids, she became addicted to social media and often it was all she wanted to do, and

she tried to take her phone with her everywhere she went.

218. Moreover, Instagram’s harmful social comparison products and the constant images Instagram pushed to Emma Claire via algorithms and targeted advertising – actions for which Instagram profited as direct result – had a foreseeable and harmful impact on Emma Claire’s self-image and self-esteem, resulting in some anxiety, difficulty with focus, and, in retrospect, likely even thoughts of suicide and self-injury. These are the precise types of harms Meta identified *internally* as harms use of its Instagram product can cause, particularly among teen girls. Meta knew that its product could and was causing this harm but failed to disclose any of its findings on these issues outside the confines of its company. On the contrary, it fostered a corporate culture of silence by fear.

219. Meta also knew or should have known that it was causing this harm to Emma Claire, including based on her usage information and patterns—which Meta collects and closely tracks—and content to which it was repeatedly exposing her via unsolicited methods, such as content Instagram pushes to Explore pages prior to when the user runs any search or request for content. This was not communication between multiple users, but advertisements and similar content Meta alone was pushing to Emma Claire as part of its business model and product operations.

220. On June 19, 2020, Darla Gill took Emma to a counselor to follow up on the issues Emma was having with focus and concentration. The counselor told Darla that she was impressed with how Emma knew what she wanted out of life at such a young age and expressed no concerns with Emma’s mental health or inability to concentrate. She referred to Emma as a “well adjusted normal 15 year old ... Client is very obedient and respectful to parents, yet would like some privacy and independence to make decisions.”

**Client's initial explanation of the problem(s), duration and precipitant cause:**

mother brought 15 year old daughter due to her inability to focus, and follow through on tasks. Mom sees her as having same trouble she did in school. Daughter is good student, involved with school, church and after school activities

**Therapist's observations of Client's Presentation and Family Interactions:**

client is well adjusted normal 15 year old. She states her strength as self confidence, weakness in math skills

**Pertinent History: (including family, social, psychological, and medical) Any prior therapy:**

**Family/Psychosocial Assessment:**

oldest sibling of 3, with an additional 5 year old foster child at home: Client very obedient and respectful to parents, yet would like some privacy and independence to make decisions

**Client/Family strengths (including support system(s)):**

family unit strong: faith strong: good circle of friends

**Tentative goals and plans:**

reduce anxiety and help to structure so that she will be successful with follow through

221. Emma Claire's parents tried to give her more independence, as she appeared to be a happy, healthy, focused, and outgoing sixteen-year-old. She had given them no cause for concern. Indeed, they still do not know how Emma Claire first obtained access to Instagram, or whether she was staying up late to access it without their knowledge and consent, which they suspect – and which usage information is now known only to Meta itself.

222. Around this same time, however, Darla and Ryan did find out that Emma Claire had opened at least one TikTok account, as well as a secondary Instagram account (known as a FINSTA or SPAM account). They had not consented or agreed to either social media account, but also, they had not seen TikTok on Emma Claire's cell phone and were still occasionally checking her phone at night. On information and belief, Emma Claire downloaded other, third-party applications and was hiding social media products on her phone, disguised as a calculator which her parents could then not discover when they checked her device. It is unknown when she first started engaging in this behavior and what products she used, other than one "calculator" application later found on a list of downloaded applications. However, it is believed that Emma Claire used this and/or similar products to hide certain social media use from her parents.

223. Then, in August of 2020, Emma made another ask for being allowed to get the Snapchat social media product. She prepared a presentation for her parents, explaining why she should be allowed to use Snapchat. Emma's reasons included,

- Easier to keep in touch
- Basketball group chat
- Family & friends have it
- Group chats with your class [about homework]
- It can be private
- You can keep in touch with [people]
- Cute fun filters
- NOBODY text ANYMORE!!
- I am responsible enough to have it and I know right from wrong
- Hailey will help me set it up ...

224. Her parents finally relented, based on the information Emma provided them, the fact that the school appeared to support use of Snapchat as a primary means for kids to communicate and, of course, because socializing was made more difficult during COVID. Plaintiffs knew that Snapchat was how Emma's basketball team and coach and even certain teachers communicated and understood from Snapchat advertisements that Snapchat was a photo sharing and communication tool.

225. However, they conditioned their approval of a single Snapchat account on Emma Claire deleting her TikTok and secondary Instagram account – which they believed she did, only it is now believed that she did not. The way Defendants' design and provide access to their products is meant to help kids get around the issue of parental consent and, on information and belief, Emma Claire either did not delete the products or deleted and reinstated them on her device, further exacerbating the harm these addictive social media products were causing to Emma Claire.

226. Plaintiffs allowed Emma to open her first Snapchat account on August 15, 2020, shortly before her 17<sup>th</sup> birthday. This is when they think she opened her first Snapchat account but cannot be certain since Snapchat does not verify age, identity, or consent.

227. Then, in April 2021, one of Emma Claire's classmates died by suicide. Plaintiffs allowed Emma Claire to keep her phone with her at night for the first time, in case she needed to reach out to her friends or them to her.

228. While Emma Claire appeared to be doing fine to her parents and family, in fact, she was being bombarded by Instagram, Snapchat, and TikTok with harmful images and videos (ranging from harmful social comparison content to violent and disturbing content glorifying self-harm and suicide). She was also receiving sexual, exploitative, and abusive direct messages from strangers, which are allowed and enabled by all three of the social media products at issue, along

with Defendants’ harmful connection and content recommendations, and the addiction Defendants’ products were fostering – which would eventually kill her.

229. On information and belief, Emma Claire spent the next four months suffering from the exact harms Meta, Snap, and TikTok identified and/or know are caused by use of their social media products; harms Defendants concealed to protect their bottom line.

230. As a proximate result of the social media addiction Meta, Snap, and TikTok fostered and encouraged, Emma Claire spent increasing amounts of time on social media, including in the middle of the night, resulting in severe sleep deprivation which, in turn, made her more anxious and less able to process information and make rational decisions.

231. Emma Claire was told by Snap, understood, and reasonably believed, that when she sent photos to other users they would quickly disappear. This is how Snap markets its social media product however, it is not how the product now works. As a result of this product defect and Emma Claire’s social media addiction and sleep deprivation, Emma Claire is believed to have sent photographs of herself that were sexually suggestive, which photographs were then circulated and/or she was threatened that they would be circulated.

232. Meta, Snap, and TikTok’s social media products also made harmful recommendations to and about Emma Claire, connecting her with strangers to increase their own engagement and thereby their own profits, which recommendations had nothing to do with any communication or informational aspects of Defendants’ products.

233. Meta, Snap, and TikTok’s social media products also provided other users with unfettered access to Emma Claire through public profiles and features (in the case of Meta and TikTok), recommendation systems (in the case of Meta, Snap, and TikTok), and features that provided direct messaging access to Emma Claire regardless of her minor status, regardless of

whether other users were on her “friends” list or equivalent, and regardless of duration, time of day, or frequency (Meta, Snap, and TikTok).

234. These product features made it literally impossible to stop unwanted interactions on all of Defendants’ platforms, resulting in a flood of unwanted interactions and harms perpetrated through and because of Defendants’ product features. On information and belief, Emma Claire received unwanted interactions, was the victim of bullying, exploitation and/or exploitation attempts, and other harms known to Defendants and that are encouraged, facilitated, and enabled by their products and product features – products and features Defendants have historically left in place because of increased engagement and despite actual knowledge that these products and product features are harming a significant number of users. Coupled with Defendants’ addictive design and Emma Claire’s resulting and foreseeable addiction, this meant that Emma Claire could not stop using Defendants’ social media products no matter how terrible they made her feel.

235. Meta, Snap, and TikTok also utilized algorithms and/or similar technologies to steer Emma Claire towards and otherwise promote and amplify harmful and unsolicited content. Defendants are not only aware of their promotion and amplification of harmful content but knew or should have known that the harms caused by their marketing and amplification systems would be exacerbated by Emma Claire’s sleep deprivation. On information and belief, all three of these defendants collect and track usage information and know when teens and children are using their products, know when they are using them at night, and know when such use is harmful.

236. Defendants’ algorithms and similar technologies are designed to exploit these social media caused vulnerabilities. The more addicted and sleep deprived a user becomes, the

more Defendants' systems promote and amplify harmful content and the more push notifications Defendants' systems send.

237. What Plaintiffs did not know in 2020—what no one knew in 2020 except Defendants—was that these social media companies were not providing fun and safe photo sharing or posting services but were instead dealing in incredibly addictive product features and pushing harmful algorithmically driven content, intended to keep Emma hooked on their products by any means necessary.

238. The sleep deprivation caused by addiction and amplification of harmful content to which Emma was exposed through her addiction to Defendants' social media products was a proximate cause of her anxiety, shame, and suicidal ideation.

239. On the evening of Saturday, August 7, 2021, Emma Claire Gill snuck out with her best friend to meet a boy and was caught sneaking back in. This was the first time she had ever been known to sneak out of her house.

240. Darla Gill took Emma Claire's phone as consequence.

241. What Defendants knew or should have known, but Plaintiffs did not know and could not reasonably have discovered, is that when you separate an addicted child from social media, for even a few hours, it puts them in vulnerable and emotionally unstable place. This is a foreseeable consequence of addiction.

242. Darla Gill looked through Emma Claire's phone and found inappropriate photos and a meme in Emma Claire's deleted photos that someone took and that was making fun of Emma. Darla decided to wake her up to talk about what was on the phone. Darla and Emma Claire talked about the images, and what they meant, and after their talk Darla held Emma Claire until she fell back asleep. Darla reasonably believed that everything was fine.

243. The next morning, Darla woke Emma Claire up to get ready for church and Emma Claire told her father she was going to feed the pigs first. Darla thought that Emma Claire was getting ready for church. Instead, without her access to social media for the first time in four months, Emma Claire wrote a letter, went to her father's truck, took his gun, went out to the barn, and shot herself. According to the police report,

Sheriff [REDACTED] showed me where a white female was in the barn and it appeared she had shot herself in the head with a 22 cal. rifle.

The Winn Parish Coroner was called to come to the scene.

after further investigation it was found out that the victim was Emma Clair Gill, W/F 16 yoa, dob 9-2-2004

Spoke to her father Joseph Gill and he advised that she had gone to the barn to feed the animals before church and when she did not come back they found her there.

The mother Darla Gill found a note in the bedroom and It was given to me.

The note appeared to be a suicide note saying goodbye to friends and family and that she could not take it anymore and she loved them.

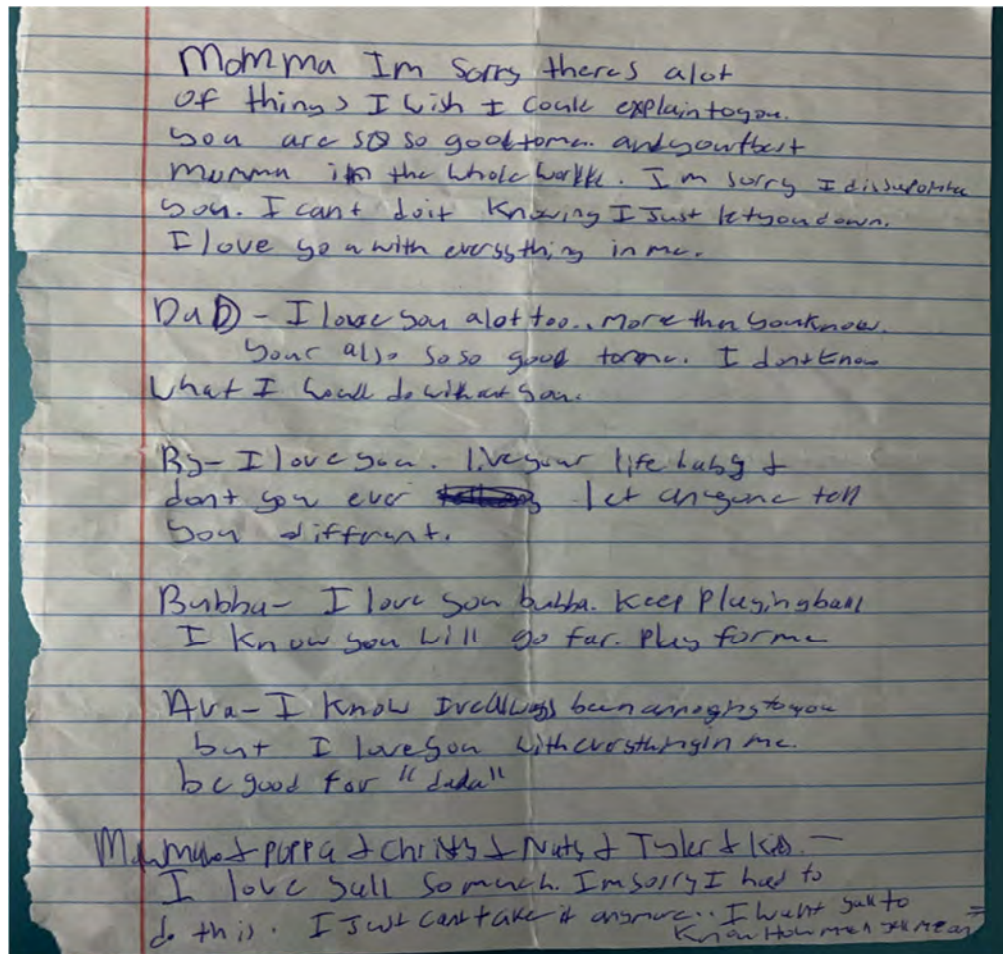

It also said at the end , I love you and what I did has nothing to do with you.

When the Coroner arrived he took over the scene and removed the body.

244. Emma Claire died on August 8, 2021, less than one year after being allowed access to the Snapchat social media product and four months after being allowed to keep her phone at night—which was allowed in case she needed to talk with friends about her classmate’s tragic suicide, also believed to have been proximately caused by social media, which happened in April 2021. The harmful dependency Defendants knowingly created proximately caused Emma Claire’s death.

245. Without access to social media, Emma Claire had no distraction, only her thoughts and everything she felt like she was going through because of Defendants' social media product designs and processes, their engineered dependency, and the resulting and foreseeable impact of sleep deprivation, depression, and anxiety.

246. Darla found the note Emma Claire had written in Emma Claire's room, which read (with corrections),

Momma, I'm sorry there's a lot of things I wish I could explain to you. You are so good to me. And you're the best momma in the whole world. I'm sorry I disappointed you. I can't do it knowing I just let you down. I love you with everything in me.

Dad - I love you a lot too. More than you know. You are also so so good to me. I don't know what I would do without you.

Ry - I love you. live your life baby and don't you ever let anyone tell you different.

Bubba - I love you, Bubba. Keep playing ball. I know you will go far. Play for me.

Ava - I know I really have been annoying to you but I love you with everything in me. Be good for "dada."

Mawmaw and Poppa and Christy and Naty and Tyler and kids -

I love you all so much. I'm sorry I had to do this. I just can't take it anymore ...

247. Plaintiffs could not make sense of what had happened. Emma Claire was an outgoing and involved young woman, with friends, and dreams, and a loving family. It was not until September of 2021, when Plaintiffs learned about the Facebook whistleblower and what Meta’s own documents said about these social media products and the harm they cause. To name only one example, Meta recognized that a significant percent of its users are addicted to its products, that children open multiple, secret accounts (referred to by Meta as a “unique value proposition”), and that use of Instagram increases thoughts of what Meta calls “SSI” (Suicide and Self-Injury)<sup>28</sup> in a percentage of teen girls who use it – Emma Claire was nothing more than a statistic to Defendants, and Defendants chose profits and growth over the health and well-being of unsuspecting teen users like Emma Claire.

248. What did not become clear until September of 2021 is that Emma Claire’s death was the proximate result of psychic injury caused by her addictive use of Instagram, Snapchat, and TikTok. Throughout the period of Emma Claire’s social media use, Plaintiffs were unaware of the clinically addictive and mentally harmful effects of Instagram, Snapchat, and TikTok.

249. Defendants designed Instagram, TikTok, and Snapchat to frustrate and prevent parents like Darla and Ryan Gill from exercising their rights and duties as parents to monitor and limit their child’s use of their social media products.

250. Defendants designed Instagram, TikTok, and Snapchat to enable minor users such as Emma Claire to obtain access to and use, become addicted to, and abuse their products without the knowledge and consent of their parents. In fact, Snapchat’s Snap Streaks product feature has been referred to as one of the addictive across all social media platforms, particularly when it

---

<sup>28</sup> See <https://digitalwellbeing.org/the-facebook-files-on-instagram-harms-all-leaked-slides-on-a-single-page/> (“‘SSI’ stands for suicide and self-injury.”)

comes to teens. On information and belief, Snap has been urged to remove that product feature, for the health and safety of children, and has refused.<sup>29</sup>

251. Defendants designed Instagram, TikTok, and Snapchat to be attractive nuisances to underage users, such as Emma Claire, but failed to exercise ordinary care owed to underage business invitees to prevent the recommendation, promotion, and amplification of dangerous and harmful content.

252. Defendants Meta, Snap, and TikTok possessed actual knowledge that their products were promoting and amplifying excessive amounts of dangerous and harmful content. Moreover, these Defendants knew or should have known that Emma Claire was addicted to their products, which addiction ultimately resulted in her death.

253. Defendants Meta, Snap, and TikTok not only failed to warn Plaintiffs of the dangers of addiction, sleep deprivation, sexual abuse, and problematic use of their applications, but affirmatively misrepresented the safety, utility, and addictive properties of their products to minor users and their parents, including Plaintiffs and Emma Claire.

## **V. PLAINTIFFS' CLAIMS**

### **COUNT I - PRODUCT LIABILITY (Design Defect)**

254. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 253 as if fully stated herein.

255. Under the Louisiana Products Liability Act ("LPLA"), La. R.S. 9:2800.51, *et seq.*, a product "manufacturer" "shall be liable to a claimant for damage proximately caused by a characteristic of the product that renders the product unreasonably dangerous when such damage arose from a reasonably anticipated use of the product by the claimant or another person or entity."

---

<sup>29</sup> See, e.g., <https://www.bbc.com/news/technology-47623626> (Snapchat under scrutiny from MPs over "addictive" streaks), March 19, 2019.

A “product is unreasonably dangerous in design” as provided in R.S. 9:2800.56, when, “at the time the product left its manufacturer’s control:

- (1) There existed an alternative design for the product that was capable of preventing the claimant’s damage; and
- (2) The likelihood that the product's design would cause the claimant's damage and the gravity of that damage outweighed the burden on the manufacturer of adopting such alternative design and the adverse effect, if any, of such alternative design on the utility of the product. An adequate warning about a product shall be considered in evaluating the likelihood of damage when the manufacturer has used reasonable care to provide the adequate warning to users and handlers of the product.”

256. Alternatively, should a choice of law analysis favor application of the substantive law of another state, such as California, under Restatement (Second) of Torts § 402(a), one who sells any product in a defective condition unreasonably dangerous to the user is subject to liability for physical harm thereby caused to the user if (a) the seller is engaged in the business of selling such a product, and (b) it is expected to and does reach the user or consumer without substantial change in the condition which it was sold.

257. Defendants’ products are defective because the foreseeable risks of harm posed by the product’s design could have been reduced or avoided by the adoption of a reasonable alternative design by Defendants and the omission of the alternative design renders the product not reasonably safe. These defective conditions rendered these products unreasonably dangerous to persons or property and existed at the time the product left Defendants’ control, reached the user or consumer without substantial change in the condition and its defective condition was a cause of Plaintiffs’ injury.

258. Defendants designed, manufactured, marketed, and sold social media products that were unreasonably dangerous because they were designed to be addictive to the minor users to whom Defendants actively marketed and because the foreseeable use of Defendants’ products causes mental and physical harm to minor users.

259. Defendants' products were unreasonably dangerous because they contained numerous design characteristics that are not necessary for the utility provided to the user but are unreasonably dangerous and implemented by Defendants solely to increase the profits they derived from each additional user and the length of time they could keep each user dependent on their product.

**A. Inadequate Safeguards From Harmful and Exploitative Content**

260. As designed, Snapchat, TikTok, and Instagram algorithms and other product features are not reasonably safe because they affirmatively direct minor users to harmful and exploitative content while failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It is feasible to design an algorithm and technologies that substantially distinguish between harmful and innocuous content and protect minor users from being exposed to harmful content without altering, modifying, or deleting any third-party content posted on Defendants' social media products. The cost of designing these products to incorporate this safeguard would be negligible while benefit would be high in terms of reducing the quantum of mental and physical harm sustained by minor users and their families.

261. Defendants also engage in conduct, outside of the algorithms and related technologies themselves, that is designed to promote harmful and exploitative content as a means of increasing their revenue from advertisements. This includes but is not limited to efforts to encourage advertisers to design ads that appeal to minors, including children under the age of 13; and product design features intended to attract and engage minor users to these virtual spaces where harmful ad content is then pushed to those users in a manner intended to increase user engagement, thereby increasing revenue to Defendants at the direct cost of user wellbeing.

262. Reasonable users (and their parents) would not expect that Defendants' products would knowingly expose them to such harmful content and/or that Defendants' products would direct them to harmful content at all, much less in the manipulative and coercive manner that they do. Defendants have and continue to knowingly use their algorithms and other technologies on users in a manner designed to affirmatively change their behavior, which methods are particularly

effective on (and harmful to) Defendants' youngest users.

**B. Failure to Verify Minor Users' Age and Identity**

263. As designed, Defendants' products are not reasonably safe because they do not provide for adequate age verification by requiring users to document and verify their age and identity.

264. Adults frequently set up user accounts on Defendants' social media products disguising their identity and/or posing as minors to groom unsuspecting minors to exchange sexually explicit content and images, which frequently progresses to sexual exploitation and trafficking, and commercial sex acts.

265. Minor users of social media and their parents do not reasonably expect that prurient adults set up fraudulent accounts on Defendants' social media products and pose as minors for malign purposes.

266. Likewise, minor users whose parents have taken affirmative steps to keep them away from Defendants' products often open multiple accounts, such that Defendants know or have reason to know that the user is underage and/or does not have parental permission to use their product. Defendants already have the information and means they need to ascertain with reasonable certainty their users' actual age. Defendants utilize these tools to investigate, assess, and report on percentages and totals of underage users for internal assessment purposes. They then choose to simply do nothing about that information as it relates to the specific, underaged users themselves.

267. Reasonably accurate age and identity verification is not only feasible but widely deployed by online retailers and internet service providers. Defendants not only have the ability to estimate the age of their users, but actually do so.

268. The cost of incorporating age and identity verification into Defendants' products would be negligible, whereas the benefit of age and identity verification would be a substantial reduction in severe mental health harms, sexual exploitation, and abuse among minor users of Defendants' products.

**C. Inadequate Parental Control and Monitoring**

269. Defendants have intentionally designed products to frustrate the exercise of parental responsibility by their minor users' parents. Parents have a right to monitor their children's social media activity to protect them from harm. Defendants have designed products that make it difficult, if not impossible, for parents to exercise parental responsibility.

270. Defendants' products are also defective for lack of parental controls, permission, and monitoring capability available on many other devices and applications.

271. Defendants' products are designed with specific product features intended to prevent and/or interfere with parents' reasonable and lawful exercise of parental control, permission, and monitoring capability available on many other devices and applications.

**D. Intentional Direction of Minor Users to Harmful and Exploitative Content**

272. Default "recommendations" communicated to new teenage users, including Emma Claire Gill, purposefully steered her toward content Defendants knew to be harmful to children of her age and gender.

273. Advertising content pushed to new minor users, including Emma Claire Gill, because of their age and vulnerability, purposefully steer those users toward content Defendants know to be harmful to children of their age and gender.

**E. Inadequate Protection of Minors from Sexual Exploitation and Abuse**

274. Defendants' products are not reasonably safe because they do not protect minor users from sexually explicit content and images, report sex offenders to law enforcement, or allow users' parents to readily report abusive users to law enforcement.

275. Parents do not expect their children will use Defendants' products to exchange sexually explicit content and images and minor users do not expect that prurient adults pose as minors for malign purposes or that exchange of such content will be deleterious to their personal safety and emotional health.

276. Minor users of Defendants' products lack the cognitive ability and life experience to identify online grooming behaviors by prurient adults and the psychosocial maturity to decline

invitations to exchange salacious material.

277. Defendants’ products are unreasonably dangerous and defective as designed because they allow minor children to use “public” profiles, in many cases default “public” profiles, that can be mass-messed by anonymous and semi-anonymous adult users for the purposes of sexual exploitation and grooming, including the sending of encrypted, disappearing messages and cash rewards through Defendants’ integrated design features.

#### **F. Design of Addictive Social Media Products**

278. As designed, Defendants’ social media products are addictive to minor users as follows: When minors use design features such as “likes” or “streaks” it causes their brains to release dopamine, which creates short term euphoria. However, as soon as dopamine is released, minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated and their euphoria is countered by dejection. In normal stimulatory environments, this dejection abates, and neutrality is restored. However, Defendants’ algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria. As this pattern continues over a period of months and the neurological baseline to trigger minor users’ dopamine responses increases, they continue to use Instagram, not for enjoyment, but simply to feel normal. Once they stop using Instagram, minor users experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

279. Addiction is not restricted to a substance abuse disorders. Rather, the working definition of addiction promulgated in the seminal article *Addictive behaviors: Etiology and Treatment* published by the American Psychological Association in its 1988 *Annual Review of Psychology* defines addiction as,

a repetitive habit pattern that increases the risk of disease and/or associated personal and social problems. Addictive behaviors are often experienced subjectively as ‘loss of control’ – the behavior contrives to occur despite volitional attempts to abstain or moderate use. These habit patterns are typically characterized by immediate gratification (short term reward), often coupled with delayed deleterious effects (long

term costs). Attempts to change an addictive behavior (via treatment or self-initiation) are typically marked with high relapse rates.

280. Addiction researchers agree that addiction involves six core components: (1) salience—the activity dominates thinking and behavior; (2) mood modification—the activity modifies/improves mood; (3) tolerance—increasing amounts of the activity are required to achieve previous effects; (4) withdrawal—the occurrence of unpleasant feelings when the activity is discontinued or suddenly reduced; (5) conflict—the activity causes conflicts in relationships, in work/education, and other activities; and (6) relapse—a tendency to revert to earlier patterns of the activity after abstinence or control.

281. Social media addiction has emerged as a problem of global concern, with researchers all over the world conducting studies to evaluate how pervasive the problem is. Addictive social media use is manifested when a user (1) becomes preoccupied by social media (salience); (2) uses social media in order to reduce negative feelings (mood modification); (3) gradually uses social media more and more in to get the same pleasure from it (tolerance/craving); (4) suffers distress if prohibited from using social media (withdrawal); (5) sacrifices other obligations and/ or causes harm to other important life areas because of their social media use (conflict/functional impairment); and (6) seeks to curtail their use of social media without success (relapse/loss of control).

282. The Bergen Facebook Addiction Scale (BFAS) was specifically developed by psychologists in to assess subjects' social media use using the aforementioned addiction criteria, and is by far the most widely used measure of social media addiction. Originally designed for Facebook, BFAS has since been generalized to all social media. BFAS has been translated into dozens of languages, including Chinese, and is used by researchers throughout the world to measure social media addiction.

283. BFAS asks subjects to consider their social media usage with respect to the six following statements and answer either (1) very rarely, (2) rarely, (3) sometimes, (4) often, or (5) very often,

- a. You spend a lot of time thinking about social media or planning how to use it.
- b. You feel an urge to use social media more and more.
- c. You use social media in order to forget about personal problems.
- d. You have tried to cut down on the use of social media without success.
- e. You become restless or troubled if you are prohibited from using social media.
- f. You use social media so much that it has had a negative impact on your job/studies.

Subjects who score a “4” or “5” on at least 4 of those statements are deemed to suffer from social media addiction.

284. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder as described in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5), which is used by mental health professionals to diagnose mental disorders. Gaming addiction is a recognized mental health disorder by the World Health Organization and International Classification of Diseases and is functionally and psychologically equivalent to social media addiction. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

285. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or not possible (sadness, anxiety, irritability).
- a. Tolerance, the need to spend more time using social media to satisfy the urge.
  - b. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
  - c. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
  - d. Continuing to use social media despite problems.
  - e. Deceiving family members or others about the amount of time spent on social media.
  - f. The use of social media to relieve negative moods, such as guilt or hopelessness.

- g. and Jeopardized school or work performance or relationships due to social media usage.

286. Defendants' advertising profits are directly tied to the quantity of their users' online time and engagement, and their algorithms and other product features are designed to maximize the time users spend using the product by directing them to content that is progressively more and more stimulative. Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

287. It is feasible to make Defendants' products not addictive to minor users by turning off the algorithms, limiting the frequency and duration of access, and suspending service during sleeping hours. Designing software that limits the frequency and duration of minor users' screen use and suspends service during sleeping hours could be accomplished at negligible cost; whereas the benefit of minor users maintaining healthy sleep patterns would be a significant reduction in depression, attempted and completed suicide, and other forms self-harm among this vulnerable age cohort.

#### **G. Inadequate Notification of Parents of Dangerous and Problematic Social Media Usage by Minor Users**

288. Defendants' products are not reasonably safe as designed because they do not include any safeguards to notify users and their parents of usage that Defendants knows to be problematic and likely to cause negative mental health effects to users, including excessive passive use and use disruptive of normal sleep patterns. This design is defective and unreasonable because:

289. It is reasonable for parents to expect that social media companies that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive or occurs during sleep time. It is feasible for Defendants to design a product that identifies a significant percentage of its minor users who are using the product more than three hours per day or using it during sleeping hours at negligible cost.

290. Defendants' products are not reasonably safe as designed because, despite numerous reported instances of child sexual solicitation and exploitation by adult users, Defendants have not undertaken reasonable design changes to protect underage users from this abuse, including notifying parents of underage users when they have been messaged or solicited by an adult user or when a user has sent inappropriate content to minor users.

291. Defendants' entire business is premised upon collecting and analyzing user data and it is feasible to use Defendants' data and algorithms and other technologies to identify and restrict improper sexual solicitation, exploitation, and abuse by adult users.

292. Moreover, it is reasonable for parents to expect that platforms such as Instagram, Snapchat, and TikTok, which actively promote their services to minors, will undertake reasonable efforts to identify users suffering from mental injury, self-harm, or sexual abuse and implement technological safeguards to notify parents by text, email, or other reasonable means that their child is in danger.

293. As a proximate result of these dangerous and defective design attributes of Defendants' product, Emma Claire Gill suffered severe mental harm. Plaintiffs did not know, and in the exercise of reasonable diligence could not have known, of these defective design in Defendants' products until 2021.

294. As a result of these dangerous and defective design attributes of Defendants' products, Plaintiffs Darla and Ryan Gill have suffered emotional distress and pecuniary hardship due to their child's mental harm resulting from social media addiction.

295. Defendants are further liable to Plaintiffs for punitive damages based upon the willful and wanton design of their products that were intentionally marketed and sold to underage users, whom they knew would be seriously harmed through their use of Instagram, Snapchat, and TikTok.

## **COUNT II –PRODUCT LIABILITY (Failure to Warn)**

296. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 295 as if fully stated herein.

297. Defendants' products are defective because of inadequate instructions or warnings because the foreseeable risks of harm posed by these products could have been reduced or avoided by the provision of reasonable instructions or warnings by the manufacturer and the omission of the instructions or warnings renders the product not reasonably safe. This defective condition rendered the products unreasonably dangerous to persons or property, existed at the time the products left Defendants' control, reached the user or consumer without substantial change in the condition in which they were sold, and were a cause of Plaintiffs' injuries.

298. Defendants' products are unreasonably dangerous and defective because they contain no warning to users or parents regarding the addictive design and effects of Instagram, Snapchat, and TikTok.

299. Defendants' social media product rely on highly complex and proprietary algorithms and similar technologies that are both undisclosed and unfathomable to ordinary consumers, who do not expect that social media platforms are physically and/or psychologically addictive.

300. The magnitude of harm from addiction to Defendants' product is horrific, ranging from simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe depression, anxiety, self-harm, and suicide.

301. The harms resulting from minors' addictive use of social media platforms have been not only well-documented in the professional and scientific literature, but Meta had actual knowledge of such harms.

302. Defendants' products are unreasonably dangerous because they lack any warnings that foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive screen time is harmful to adolescents' mental health and sleep patterns and emotional well-being. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

303. It is feasible for Defendants' products to report the frequency and duration of their minor users' screen time to their parents without disclosing the content of communications at negligible cost, whereas parents' ability to track the frequency, time and duration of their minor child's social media use are better situated to identify and address problems arising from such use and to better exercise their rights and responsibilities as parents.

304. Defendants knew about these harms, knew that users and parents would not be able to safely use their products without warnings, and failed to provide warnings that were adequate to make the product reasonably safe during ordinary and foreseeable use by children.

305. As a result of Defendants' failure to warn, Emma Claire Gill suffered severe mental harm, leading to physical injury from her use of Instagram, Snapchat, and TikTok.

306. As a result of Defendants' failure to warn, Plaintiffs Darla and Ryan Gill suffered emotional distress and pecuniary hardship due to her child's mental harm resulting from social media addiction.

307. Defendants are further liable to Plaintiffs for punitive damages based upon their willful and wanton failure to warn of known dangers of their products that were intentionally marketed and sold to teenage users, whom they knew would be seriously harmed through their use of Instagram, Snapchat, and TikTok.

### **COUNT III – NEGLIGENCE**

308. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 307 as if fully stated herein.

309. At all relevant times, Defendants had a duty to exercise reasonable care and caution for the safety of individuals using their products, such Emma Claire.

310. Defendants owe a heightened duty of care to minor users of their social media products because adolescents' brains are not fully developed, which results in a diminished capacity to make good decisions regarding their social media usages, eschew self-destructive behaviors, and overcome emotional and psychological harm from negative and destructive social media encounters.

311. As product manufacturers marketing and selling products to consumers, Defendants owed a duty to exercise ordinary care in the manufacture, marketing, and sale of their products, including a duty to warn minor users and their parents of hazards that Defendants knew to be present, but not obvious, to underage users and their parents.

312. As business owners, Defendants owe their users who visit their social media platforms and from whom they derive billions of dollars per year in advertising revenue a duty of ordinary care substantially similar to that owed by physical business owners to its business invitees.

313. Defendants were negligent, grossly negligent, reckless and/or careless in that they failed to exercise ordinary care and caution for the safety of underage users, like Emma Claire Gill, using their social media products.

314. Defendants were negligent in failing to conduct adequate testing and failing to allow independent academic researchers to adequately study the effects of their products and levels of problematic use amongst teenage users. Defendants know that their products are harmful, cause extensive mental harm, and that minor users are engaging in problematic and addictive use that their parents are helpless to monitor and prevent.

315. Defendants are negligent in failing to provide adequate warnings about the dangers associated with the use of social media products and in failing to advise users and their parents about how and when to safely use their social media platforms and features.

316. Defendants are negligent in failing to fully assess, investigate, and restrict the use of their social media products by adults to sexually solicit, abuse, manipulate, and exploit minor users of their social media products.

317. Defendants are negligent in failing to provide users and parents the tools to ensure their social media products are used in a limited and safe manner by underage users.

318. As a result of Defendants' negligence, Emma Claire suffered severe mental harm from her use of Instagram, Snapchat, and TikTok.

319. As a result of Defendants' negligence, Plaintiffs Darla and Ryan Gill suffered

emotional distress and pecuniary hardship due to her child's mental harm resulting from social media addiction.

320. Defendants are further liable to Plaintiffs for punitive damages based upon its willful and wanton conduct toward underage users, including Emma Claire Gill, whom they knew would be seriously harmed through the use of their social media products.

#### **COUNT IV – VIOLATIONS OF CALIFORNIA'S UNFAIR COMPETITION LAW**

##### **(Cal. Bus. & Prof Code §§ 17200, *et seq.*)**

321. Plaintiffs realleges each and every allegation contained in paragraphs 1 through 320 as if fully stated herein.

322. Defendants are each a "person" as defined under California Business & Professions Code § 17201.

323. The UCL prohibits all conduct that is unlawful, unfair, or fraudulent.

324. Defendants' conduct is unlawful as set forth in Counts I-III, above.

325. Defendants engaged in fraudulent and deceptive business practices in violation of the UCL by promoting products to underage users, including Emma Claire, while concealing critical information regarding the addictive nature and risk of harm these products pose. Defendants knew and should have known that their statements and omissions regarding the addictive and harmful nature of their products were misleading and therefore likely to deceive the members of the public who use Defendants' products and who permit their underage children to use Defendants' products. Had Plaintiffs known of the dangerous nature of Defendants' products, they would have taken early and aggressive steps to stop or limit their child's use of Defendants' products.

326. Defendants' practices are unfair and violate the UCL because they offend established public policy, and because the harm these practices cause to consumers greatly outweighs any benefits associated with them.

327. Defendants' conduct has resulted in a substantial injury that Plaintiffs could not reasonably have avoided because of Defendants' deceptive conduct. This substantial harm is not

outweighed by any countervailing benefits to consumers or competition.

328. As a direct and proximate result of the foregoing acts and practices, Defendants have received, or will receive, income, profits, and other benefits, which they would not have received if they had not engaged in the violations of the UCL described in herein. As a direct and proximate result of the foregoing acts and practices, Defendants have also obtained an unfair advantage over similar businesses that have not engaged in such practices.

329. As a result of Defendants' UCL violations, Plaintiffs suffered an injury in fact and lost money as set forth above and detailed in her prayer for relief.

330. Accordingly, Plaintiffs seeks injunctive and equitable relief to halt and remedy Defendants' unlawful, fraudulent, and unfair conduct.

## **COUNT V – VIOLATION OF LOUISIANA UNFAIR TRADE PRACTICES ACT**

**(La. Rev. Stat. §§ 1405, *et seq.*)**

331. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 330 as if fully stated herein.

332. Defendants' commercials, marketing, promotions, and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that their social media products were safe, improved social connectivity, and improved the mental and physical health of users.

333. Meta CEO Mark Zuckerberg testified under oath to Congress that Meta does not design its products to be addictive and that he is not concerned with social media addiction as it relates to teens. He then again testified under oath to Congress that Meta does not design its products to be addictive and that research on addictiveness of social media has not been conclusive. And, more recently, he testified under oath to Congress that Instagram is not addictive and that it does not cause harm to children and teens. As established in the Facebook papers, Meta not only has *reason* to believe its products are addictive, Meta has actual knowledge that its products are addictive and are causing harm to a significant number of children and teens. Meta concealed the truth and warned employees against disclosure.

334. Snap’s Vice President of Global Public Policy stated in written testimony to a Senate Subcommittee that Snap takes “into account the unique sensitivities and considerations of minors when we design products” when, in fact, Snap has developed a product feature to help underage users conceal information from their parents. She claimed that Snap makes it harder for strangers to find minors when, in fact, Snapchat’s “Quick Add” feature is responsible for introducing millions of minors to complete strangers and its Snap Map feature has enabled threats, exploitation, and location of minors by complete strangers. Likewise, Snap’s Head of Global Platform Safety, Jacqueline Beauchere, represented to the public that “Snapchat is designed for communications between and among real friends; it doesn’t facilitate connections with unfamiliar people like some social media platforms.” But again, this is not true and/or historically was not the case.

335. TikTok’s Vice President and Head of Public Policy for the Americas, Michael Beckerman, testified under oath to Congress that TikTok creates age-appropriate experiences, and does not allow people under 16 to send direct messages on its platform. He also testified under oath that TikTok has looked and found no evidence of any blackout challenge on its platform. In fact, TikTok takes no reasonable precautions when it comes to children under 16, first and foremost, because it does not actually verify use age or identity. And several children have died after being exposed to the TikTok Blackout Challenge as direct result of TikTok’s algorithm recommending and/or promoting such content. TikTok also knows of underage users and allows them to post videos, then fails to take those videos down promptly upon discovery that the user is underage.

336. Defendants’ Terms of Service also represent that Defendants care about and protect the safety of their users, including use of technology for these purposes—when in fact, Defendants have chosen to use their technology in a manner that is harmful to users.

337. The above statements are not exhaustive, but they are indicative and reflective of the deceptive and/or misleading statements Defendants have been feeding to the public for years to convince people that their products are safe for use by teenagers, like Emma Claire Gill.

338. Defendants knew that their products were not safe.

339. Defendants knew that their products were addictive and/or harmful to a significant portion of users, including children and teens.

340. Defendants' public statements and other marketing and advertising materials failed to disclose the truth. Defendants have gone to considerable lengths to conceal the truth. Defendants lied about the harms their social media products are causing.

341. Defendants' omissions were also misleading and deceptive in every respect, for example, talking about how their social media products make some users' lives better and ignoring the fact that their products are causing serious harms to other users, including but not limited to what Meta calls SSI, Suicide and Self-Injury. Defendants failed to disclose, and spent years actively concealing, the fact that their social media products cause addiction, sleep deprivation, anxiety, depression, anger, eating disorders, self-harm, suicidal ideation, and suicide, among other harms.

342. These representations were false and material, as were Defendants' omissions. These representations were communicated to Plaintiffs via the commercials, the media, the internet, advertising, websites, and the platforms themselves and Plaintiffs reasonably relied on these representations to her detriment. Defendants intended for members of the public, including Plaintiffs, to rely on these misrepresentations and omissions, and Plaintiffs did, and these misrepresentations and omissions were a substantial factor in causing Plaintiffs' harm.

343. Defendants' conduct, as described herein, offends established public policy and is immoral, unethical, oppressive, unscrupulous, and substantially injurious. Defendants engaged in unfair methods of competition and unfair and deceptive acts in the conduct of trade and commerce.

344. Defendants' conduct involved fraud, misrepresentation, deception, and unethical conduct, as alleged above.

345. Plaintiffs suffered an ascertainable loss because of Defendants' unfair and deceptive conduct.

## DEMAND FOR JURY TRIAL

Plaintiffs hereby demand a trial by jury.

## PRAAYER FOR RELIEF

WHEREFORE, Plaintiffs prays for judgment against Defendants for relief as follows:

- a) Past physical and mental pain and suffering of Emma Claire Gill, in an amount to be more readily ascertained at the time and place set for trial;
- b) Loss of enjoyment of life, in an amount to be more readily ascertained at the time and place set for trial;
- c) Past medical care expenses for the care and treatment of the injuries sustained by Emma Claire Gill, in an amount to be more readily ascertained at the time and place set for trial;
- d) Past and future impairment to capacity to perform everyday activities;
- e) Plaintiffs' pecuniary loss and loss of Emma Claire Gill's services, comfort, care, society, and companionship to Darla and Ryan Gill;
- f) Loss of future income and earning capacity of Emma Claire Gill;
- g) Punitive damages, to the extent available;
- h) Injunctive relief, including, but not limited to, ordering Defendants to stop the harmful conduct alleged herein, remedy the unreasonably dangerous algorithms in their social media products, and provide warnings to minor users and their parents that Defendants' social media products are addictive and pose a clear and present danger to unsuspecting minors;
- i) Reasonable costs and attorney and expert/consultant fees incurred in prosecuting this action; and
- j) Such other and further relief as this Court deems just and equitable.

Dated: July 20, 2022

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users,

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Missouri and purposely avail themselves of the benefits of transacting business with Missouri residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Missouri and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Missouri relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Missouri.

18. Defendants advertise extensively in Missouri, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing

its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Missouri for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Missouri-related activities over the last several years arising from their defective and inherently dangerous social media products by Missouri residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Western District of Missouri.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Valentina Estevanott is an adult individual currently residing in Cypress, Texas. However, as stated, a substantial part of the events giving rise to Plaintiff's claims—including her initial exposure to the Meta platform(s), the onset of her addiction, and her injuries as a result of her use of the Meta platform(s)—occurred while she resided within the State of Missouri.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland);

Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta's feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the "attention economy,"<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its "Like" button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon

the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has

expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Valentina Estevanott is a twenty-one year old woman who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the clinically addictive and mentally harmful effects of Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

77. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

78. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

80. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

82. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features

listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or

lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

97. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

105. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
- i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of

reality, and suffer injuries including multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, "Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off."<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users' mental health. By contrast, it shifts blame to other factors, such as third parties posting "suicide challenges," the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a "Family Digital Wellness Guide" created by the Boston Children's Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because "[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The 'blue light' that comes from TVs and other screen devices can

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

118. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and

defectively leaves it to individuals' research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a "Youth Portal" website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook's and Instagram's individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to "help young people become empowered in a digital world," its "Wellness" subpage lists five activities, "mindful breathing," "finding support," "building resilience: finding silver linings," "a moment for me," and "taking a break."<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms' lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

124. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

125. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

127. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

129. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");

- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally

harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's

algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm,

insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

166. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information,

research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

177. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

179. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of

Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

182. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE AND/OR GROSS NEGLIGENCE**

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video

filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user;

where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

203. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

205. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;

- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes multiple periods of suicidal ideation, self-

harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, which may cause or contribute to additional disease.

212. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

215. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

217. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harms.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them>.

236. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;
  - p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and

- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the

platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **ELEVENTH CAUSE OF ACTION CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

273. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

274. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

276. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

278. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

279. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

298. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

300. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

302. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

303. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of

their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

a. MO. ANN. STAT. § 407.020 *et seq.* (Missouri Merchandising Practices Act).

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

323. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

325. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

335. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

336. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

337. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

338. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

341. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

348. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

350. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION  
INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

365. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

366. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

368. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

370. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

371. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

374. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

376. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

378. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

381. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm, an eating disorder(s), depression, anxiety, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION  
MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

410. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully

until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

428. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 7, 2022

Respectfully Submitted,

/s/ Kirk J. Goza

UNITED STATES DISTRICT COURT  
DISTRICT OF OREGON  
MEDFORD DIVISION

BRITTNEY DOFFING, individually and as  
next of friend to minor plaintiff M.K.,

Plaintiff,

V.

META PLATFORMS, INC., formerly known as FACEBOOK, INC.; and  
SNAP, INC.,

Defendants.

NO. 22-CV-100

## COMPLAINT FOR PERSONAL INJURIES

## JURY DEMAND

In these digital public spaces, which are privately owned and tend to be run for profit, there can be tension between what's best for the technology company and what's best for the individual user or for society. Business models are often built around maximizing user engagement as opposed to safeguarding users' health and ensuring that users engage with one another in safe and healthy ways. . . . Technology companies must step up and take responsibility for creating a safe digital environment for children and youth. Today, most companies are not transparent about the impact of their products, which prevents parents and young people from making informed decisions and researchers from identifying problems and solutions.

*Protecting Youth Mental Health* United States Surgeon General's Advisory  
December 7, 2021

1 Plaintiff BRITTNEY DOFFING, on behalf of herself and as next of friend to her minor  
2 child, M.K., brings this action against Meta Platforms, Inc., formerly known as Facebook, Inc.  
3 (“Facebook”), doing business as Instagram (“Instagram”) and Snap, Inc., doing business as  
4 Snapchat (“Snapchat” or “Snap”) and alleges as follows:

## 5 I. INTRODUCTION

6 1. This product liability action seeks to hold Defendants’ products responsible for  
7 causing and contributing to burgeoning mental health crisis perpetrated upon the children and  
8 teenagers in the United States by Defendants and, specifically, for personal injuries caused to  
9 Plaintiff BRITTNEY DOFFING and her minor child M.K. caused by M.K.’s addictive use of  
10 and exposure to Defendants’ unreasonable dangerous and defective social media products.

11 2. On December 7, 2021, the United States Surgeon General issued an advisory  
12 cataloging extensive evidence showing a dramatic increase in teen mental health crises including  
13 suicides, attempted suicides, and inpatient mental-health admissions. Between 2007 and 2018,  
14 for example, suicide rates among youth ages twelve to sixteen in the U.S. increased a staggering  
15 146 percent. Incidence of serious depression and dissatisfaction with life in this age group have  
16 likewise increased dramatically.

17 3. The most significant and far-reaching change to the lives of young people during  
18 this period was the widespread adoption of mobile social media platforms, prominently the  
19 Instagram and Snapchat products designed and distributed by Defendants. By 2014, 80 percent  
20 of high-school students said they used a social-media platform daily, and 24 percent said that  
21 they were online “almost constantly,” according to a Pew Research Center report. By 2018, 45  
22 percent reported being online “almost constantly” in a follow up report. Many children and  
23

1 teenagers spend hours throughout the day and night using Defendants Instagram and Snapchat  
2 products.

3 4. Peer reviewed studies and the available medical science have identified a  
4 particular type of social media and electronic device use associated with major mental health  
5 injuries, including depression, self-harm, eating disorders, suicide attempts and ideation,  
6 dissatisfaction with life, depression, and sleep deprivation. Both large observational studies and  
7 experimental results point to the heavy use of Defendants social media products as a cause of  
8 increased depression, suicidal ideation, and sleep deprivation among teenagers, particularly  
9 teenage girls.

10 5. Defendants have invested billions of dollars to intentionally design their products  
11 to be addictive and encourage use that they know to be problematic and highly detrimental to  
12 their users' mental health. For example, internal, non-public data collected by Instagram and  
13 Snapchat reveal large numbers of its users—particularly teenage girls—are engaging in  
14 problematic use of its products. Indeed, the problematic use identified in the medical literature is  
15 precisely the type of use Defendants have designed their products to encourage through  
16 psychological manipulation techniques—sometimes referred to as persuasive design—that is  
17 well-recognized to cause all of the hallmarks of clinical addiction.

18 6. Plaintiff brings claims of strict liability based upon Defendants' defective design  
19 of their social media products that renders such products not reasonably safe for ordinary  
20 consumers in general and minor users in particular. It is technologically feasible to design social  
21 media products that substantially decrease both the incidence and magnitude of harm to ordinary  
22 consumers and minors arising from their foreseeable use of Defendants' products with a  
23 negligible increase in production cost.

1           7. Plaintiff also brings claims for strict liability based on Defendants' failure to  
2 provide adequate warnings to minor users and their parents of danger of mental, physical, and  
3 emotional harms arising from foreseeable use of their social media products. The addictive  
4 quality of Defendants' products and their harmful algorithms are not fully known or appreciated  
5 by minor users and their parents.

6           8. Plaintiff also brings claims for common law negligence arising from Defendants'  
7 unreasonably dangerous social media products and their failure to warn of such dangers.  
8 Defendants knew, or in the exercise of ordinary care should have known, that their social media  
9 products were harmful to a significant percentage of their minor users and failed to re-design  
10 their products to ameliorate these harms or warn minor users and their parents of dangers arising  
11 out of the foreseeable use of their products. In other words, Defendants intentionally created an  
12 attractive nuisance to young children, but failed to provide adequate safeguards from the harmful  
13 effects they knew were occurring on their wholly owned and controlled digital premises, which  
14 Defendants refer to interchangeably as the "metaverse."

15           9. Plaintiff also brings claims under Oregon law prohibiting discrimination on the  
16 basis of sex by a place of public accommodation. ORS 659A.403. Defendants violated this  
17 statute by targeting M.K. with harmful content, advertising, and recommendations based upon  
18 her female gender.

19           10. Plaintiff also brings claims under 47 U.S.C. § 1595 based Defendants' financial  
20 benefit garnered from knowingly assisting, supporting, facilitating sexual solicitation and  
21 exploitation of minor children. Defendants are aware of, and knowingly benefit, from a large  
22 number of predatory users who regularly use Defendants' platforms to solicit and groom minor  
23 users into sexually compromising situations and lure them into being sexually exploited and

1 trafficked. Defendants have failed to undertake reasonable efforts to redesign their social media  
2 platforms to protect their minor users against such harms.

## 3 II. PARTIES

4 11. Plaintiff BRITTNEY DOFFING is an individual residing in Ashland, Oregon and  
5 the mother and custodial parent of her 15-year-old daughter M.K. Plaintiff brings this suit on  
6 behalf of herself and on behalf of M.K. pursuant to Fed. R. Civ. P. 17.

7 12. Plaintiff BRITTNEY DOFFING has not entered into a User Agreement or other  
8 contractual relationship with any of the Defendants herein in connection with M.K.'s use of their  
9 social media products. As such, in prosecuting this action Plaintiff is not bound by any  
10 arbitration, forum selection, choice of law or class action waiver set forth in said User  
11 Agreements

12 13. Defendant Meta Platforms, Inc., formerly known as Facebook, Inc., is a Delaware  
13 corporation with its principal place of business in Menlo Park, CA. Defendant Meta Platforms  
14 owns and operates the Instagram social media platform, an application that is widely available to  
15 users throughout the United States.

16 14. Defendant Snap, Inc. is a Delaware corporation with its principal place of  
17 business in Santa Monica, CA. Defendant Snap owns and operates the Snapchat social media  
18 platform, an application that is widely marketed by Snap and available to users throughout the  
19 United States.

## 20 III. JURISDICTION AND VENUE

21 15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. §  
22 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are  
23 residents of different states.

16. This Court has specific jurisdiction over Meta and Snap, Inc because these Defendants transact business in the State of Oregon and purposefully avail themselves of the benefits of transacting business in Oregon with Oregon residents; Plaintiff's claims set forth herein arise out of and relate to Defendant's activities in the State of Oregon and purposeful availing of the benefits of transacting business in Oregon with Oregon residents and exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Venue is proper in this District under 28 U.S.C. § 1391(b) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in this District.

#### IV. FACTUAL ALLEGATIONS

### A. Instagram Background

18. Instagram is a photo sharing social media application that originally enabled users to post and share photos that could be seen by other users who “follow” the user. A user’s followers could “like” and post comments on the photos. Instagram was purchased by Facebook, Inc. for approximately \$1B in 2012.

19. A user's "feed" is comprised of a series of photos and videos posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram.

20. Instagram also features a “discover” feature where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ demographics and prior activity in the application.

21. Users' profiles on Instagram may be public or private. On public profiles, any user is able to view the photos, videos, and other content posted by the user. On private profiles,

1 the users' content may only be viewed by the user's followers, which the user is able to approve.  
2 During the relevant period, Instagram profiles were public by default and Instagram allowed all  
3 users to message and send follow request to underage users, including Plaintiff M.K.

4 22. During the last five years, Instagram has added features designed to increase the  
5 time spent by users on their platforms and promoted the use of short videos and temporary posts.  
6 The latter are referred to as "Reels" while the former are referred to as Instagram "Stories."

7 23. Instagram notifies users through text and email of activity in which they might be  
8 interested, which is designed to and does prompt users to open Instagram and be exposed to  
9 content selected by Instagram to maximize the length of time and amount of content viewed by  
10 the user.

11 24. Over time, Instagram has become the most popular photo sharing social media  
12 platform amongst teenagers and young adults in the United States with over 57 million users  
13 below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

14 **B. Snapchat Background**

15 25. Snapchat is a photo and short video sharing social media application that allows  
16 users to form groups and share posts or "Snaps" that disappear after being viewed by the  
17 recipients. Snapchat also features a series of rewards including trophies, streaks, and other  
18 signals of social recognition similar to the "likes" metrics available across other platforms.  
19 These features are designed to encourage users to share their videos and posts with the public.  
20 Users also have an explore feed that displays content created by other users around the world.

21 26. Snapchat was founded in 2011 by current president and CEO Evan Spiegel and  
22 several co-founders from Stanford University.

1           27. In 2014, Snapchat added “Stories” and “Chat” features that allowed users to post  
2 longer stories that could be viewed by users outside the user’s friends. In 2014, Snapchat also  
3 released a feature called Snapcash that allowed users to send money to other users.

4           28. Snapchat also allows users to enable the sharing of their location, which allows  
5 the users followers (and the public for Snaps submitted by the users) to see the user’s location on  
6 a map.

7           29. By 2015, Snapchat had over 75 million monthly active users and is considered to  
8 be the most popular social media application amongst American teenagers in terms of number of  
9 users and time spent using the platform.

10 **C. Defendants’ Applications Are Products**

11           30. Both Instagram and Snapchat are products that are designed and manufactured by  
12 Meta and Snap, respectively. These products are designed to be used by children and are  
13 marketed to children across the United States. Further, Defendants are aware that large numbers  
14 of children under the age of 13 use their products despite user terms or “community standards”  
15 that purport to restrict use to individuals who are 13 and older.

16 **D. Defendants’ Business Model is Based on Maximizing User Screen Time**

17           31. Defendants do not charge their users for downloading or using their application  
18 products, but instead receive money from advertisers who pay a premium to target  
19 advertisements to specific demographic groups of users in the applications.

20           32. As such, Defendants generate revenue based upon the total time spent on the  
21 application, which directly correlates with the number of advertisements that can be shown to  
22 each user.

1           33.     Snapchat utilizes unknown and changing rewards that are designed to prompt  
2 users to use Snapchat in excessive and dangerous ways. Snap knows or should know that its  
3 design has created extreme and addictive behaviors by its largely teenage and young-adult users.  
4 Indeed, Snap knowingly or purposefully designed its products to encourage such behaviors.

5           34.     All the achievements and trophies in Snapchat are unknown to users and users do  
6 not find out about the criteria for specific achievements until they obtain or unlock them. This  
7 design conforms to well-established principles of operant conditioning wherein intermittent  
8 reinforcement provides the most reliable tool to maintain a desired behavior over time.

9           35.     This design is akin to a slot machine but marketed toward teenage users who are  
10 even more susceptible than gambling addicts to the variable reward and reminder system  
11 designed by Snap. The system is designed to reward increasingly extreme behavior because users  
12 are not actually aware of what actions will unlock the next award.

13           36.     Instagram, like Snapchat, is designed around a series of design features that do  
14 not add to the communication and communication utility of the application, but instead seek to  
15 exploit users' susceptibility to persuasive design and unlimited accumulation of unpredictable  
16 and uncertain rewards, including "likes" and "followers." In the hands of children, this design is  
17 unreasonably dangerous to the mental well-being of underage user's developing minds.

18           37.     Internal Meta documents identify the potential of reduction in usage by their  
19 minor users as an "existential threat" to their business and spend billions of dollars per year  
20 marketing their products to minors.

21 **E.     Defendants Have Designed Complex Algorithms to Addict Teen Users.**

22           38.     Defendants have intentionally designed their products to maximize users 'screen  
23 time, using complex algorithms designed to exploit human psychology and driven by the most

1 advanced computer algorithms and artificial intelligence available to two of the largest  
2 technology companies in the world.

3 39. Defendants designed and have progressively modified their products to promote  
4 problematic and excessive use that they know is indicative of addictive and self-destructive use.

5 40. One of these features—present in both Snapchat and Instagram—is the use of  
6 complex algorithms to select and promote content that is provided to users in an unlimited and  
7 never ending “feed.” Defendants are well-aware that algorithm-controlled feeds promote  
8 unlimited “scrolling”—a type of use those studies have identified as detrimental to users’ mental  
9 health – however, this type of use allows Defendants to display more advertisements and obtain  
10 more revenue from each individual user.

11 41. The addictive nature of Defendants products and the complex and psychologically  
12 manipulative design of their algorithms is unknown to ordinary users.

13 42. Defendants have knowingly limited Parents ability to monitor and prevent  
14 problematic use by their children.

15 **F. Minor Users’ Incomplete Brain Development Renders Them Particularly**  
16 **Susceptible to Manipulative Algorithms with Diminished Capacity to Eschew Self-**  
17 **Destructive Behaviors and Less Resiliency to Overcome Negative Social Media**  
18 **Influences**

19 43. Emerging research shows that the human brain is still developing during  
20 adolescence in ways consistent with adolescents demonstrated psychosocial immaturity.  
21 Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation,  
22 emotional regulation, and impulse control.

23 44. The frontal lobes—and in particular the prefrontal cortex—of the brain play an  
essential part in higher-order cognitive functions, impulse control and executive decision-  
making. These regions of the brain are central to the process of planning and decision-making,

1 including the evaluation of future consequences and the weighing of risk and reward. They are  
2 also essential to the ability to control emotions and inhibit impulses. MRI studies have shown  
3 that the prefrontal cortex is one of the last regions of the brain to mature.

4 45. During childhood and adolescence, the brain is maturing in at least two major  
5 ways. First, the brain undergoes myelination, the process through which the neural pathways  
6 connecting different parts of the brain become insulated with white fatty tissue called myelin.  
7 Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away  
8 of unused synapses, leading to more efficient neural connections. Through myelination and  
9 pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently,  
10 improving the “executive” functions of the frontal lobes, including impulse control and risk  
11 evaluation. This shift in the brain’s composition continues throughout adolescence and continues  
12 into young adulthood.

13 46. In late adolescence, important aspects of brain maturation remain incomplete,  
14 particularly those involving the brain’s executive functions and the coordinated activity of  
15 regions involved in emotion and cognition. As such, the part of the brain that is critical for  
16 control of impulses and emotions and mature, considered decision-making is still developing  
17 during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of  
18 juveniles.

19 47. The algorithms in Defendants’ social media products exploit minor users  
20 diminished decision-making capacity, impulse control, emotional maturity, and psychological  
21 resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise  
22 of reasonable care should know, that because their minor users’ frontal lobes are not fully  
23 developed, such users are much more likely to sustain serious physical and psychological harm

1 through their social media use than adult users. Nevertheless, Defendants have failed to design  
2 their products with any protections to account for and ameliorate the psychosocial immaturity of  
3 their minor users.

4 **G. Defendants Misrepresent the Addictive Design and Effects of Nature of Instagram**  
5 **and Snapchat.**

6 48. During the relevant time period, Defendants stated in public comments that their  
7 products are not addictive. Defendants knew or should have known that those statements were  
8 untrue.

9 49. Neither Instagram or Snapchat warned users or their parents of the addictive and  
10 mentally harmful effects that the use of their products was known cause amongst minor users,  
11 like Plaintiff M.K.

12 **H. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants**  
13 **Liable as the Publisher or Speaker of Any Content Provided, Posted or Created by**  
14 **Third Parties**

15 50. Plaintiff seeks to hold Defendants accountable for their own alleged acts and  
16 omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of  
17 dangerously defective social media products, not as the speaker or publisher of third-party  
18 content.

19 51. Plaintiff alleges that Defendants failed to warn minor users and their parents of  
20 known dangers arising from anticipated use of their social media platforms. None of Plaintiff's  
21 claims rely on treating Defendants as the publisher or speaker of any third party's words.  
22 Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and  
23 omissions, not for the speech of others or for Defendants good faith attempts to restrict access to  
objectionable content.

1           52. Plaintiff is not alleging that Defendants are liable for what the third parties said,  
2 but for what Defendants did or did not do.

3           53. None of Plaintiff's Claims for Relief set forth herein require treating Defendants  
4 as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold  
5 Defendants liable for their own speech and their own silence in failing to warn of foreseeable  
6 dangers arising from anticipate use of their products. Defendants could manifestly fulfill their  
7 legal duty to design reasonably safe social products and furnish adequate warnings of foreseeable  
8 dangers arising out of the use of their products without altering, deleting, or modifying the  
9 content of a *single* third-party post or communication.

10                           **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

11           54. Plaintiff M.K. is a 15-year-old girl who is a heavy user of Instagram and  
12 Snapchat.

13           55. Plaintiff BRITTNEY DOFFING, worried about the potentially harmful effects of  
14 social media, specifically prohibited M.K. from using social media until M.K.'s 14<sup>th</sup> birthday.

15           56. BRITTNEY DOFFING was unaware of the clinically addictive and mentally  
16 harmful effects of Instagram and Snapchat.

17           57. Shortly upon receiving a smart phone for her 14<sup>th</sup> birthday in March 2020, M.K.  
18 began engaging in addictive and problematic use of Instagram and Snapchat. Prior to March  
19 2020, M.K. used a phone that did not have the ability to download social media applications,  
20 although she was able to use text messages and make calls.

21           58. Prior to March 2020, M.K. was attending school and passing her classes. Within  
22 two weeks of her opening Instagram and Snapchat accounts, M.K. displayed little interest in any  
23

1 activity other than viewing and posting on the Instagram and Snapchat applications. Her  
2 academic performance showed a marked decrease due to her obsessive social media use.

3 59. Prompted by the addictive design of Defendants' products and the constant  
4 notifications that Defendants' applications pushed to M.K.'s phone 24 hours a day, M.K. began  
5 getting less and less sleep.

6 60. As a proximate result of her addiction to Instagram and Snapchat, M.K. has been  
7 hospitalized twice for psychiatric episodes triggered by Doffing's attempts to take away or  
8 restrict M.K.'s usage of Instagram and Snapchat.

9 61. As a proximate result of her use of Instagram and Snapchat, and specifically due  
10 to recommendations and content Defendants selected and showed to M.K., a minor user of  
11 Instagram and Snapchat, M.K. subsequently developed an eating disorder and engaged in  
12 periodic crash diets followed by binge eating.

13 62. Through her use of Instagram and Snapchat, M.K. has been messaged and  
14 solicited for sexual exploitive content and acts on numerous occasions by male users of  
15 Instagram and Snapchat, who are encouraged to use these platforms to sexually solicit and abuse  
16 minors due to Defendants' refusal to verify identity and age for new users.

17 63. BRITTNEY DOFFING has recorded and reported these improper sexual  
18 solicitations to law enforcement on multiple occasions.

19 64. Due to M.K.'s addiction to Instagram and Snapchat, she has run away from home  
20 on multiple occasions in order to gain access to and use her multiple Snapchat and Instagram  
21 accounts.

22 65. Defendants have designed Instagram and Snapchat, including through the use of  
23 disappearing or time-limited messaging features, to frustrate and prevent parents like

BRITTNEY DOFFING from exercising their rights and duties as parents to monitor and limit their children's use of Instagram and Snapchat.

66. Defendants have designed Instagram and Snapchat to allow minor users to use, become addicted to, and abuse their products without the consent of the users' parents, like BRITTNEY DOFFING.

67. Defendants have specifically designed Instagram and Snapchat to be attractive nuisances to underage users but failed to exercise ordinary care owed to underage business invitees to prevent the rampant solicitation of underage girls by anonymous older users who do not disclose their real identities, and mass message underage users with the goal of grooming and sexually exploiting minors.

68. Defendants not only failed to warn M.K. and BRITTNEY DOFFING of the dangers of addiction, sleep deprivation, and problematic use of their applications, but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021 Senate Committee hearing that Instagram does not addict its users.

69. As a result of M.K.'s extensive and problematic use of Instagram and Snapchat, she developed numerous mental health conditions including multiple inpatient psychiatric admissions, an eating disorder, self-harm, and physically and mentally abusive behaviors toward her mother and siblings.

## **VI. PLAINTIFF'S CLAIMS**

### **COUNT I - STRICT PRODUCT LIABILITY (Design Defect)**

70. Plaintiff realleges each and every allegation contained in paragraphs 1 through 69 as if fully stated herein.

1           71. Under Restatement (Second) of Torts § 402(a), one who sells any product in a  
2 defective condition unreasonably dangerous to the user is subject to liability for physical harm  
3 thereby caused to the user if (a) the seller is engaged in the business of selling such a product,  
4 and (b) it is expected to and does reach the user or consumer without substantial change in the  
5 condition which it was sold.

6           72. Defendants designed, manufactured, marketed, and sold products that were  
7 unreasonably dangerous because they were designed to be addictive and detrimental to mental  
8 health of children to whom the Defendants knowingly marketed their products.

9           73. Defendants' products were unreasonably dangerous because they contained  
10 numerous design characteristics that were not necessary for the utility provided to the user but  
11 were unreasonably dangerous and implemented by Defendants solely to increase the profits they  
12 derived from each additional user.

13 **A. Inadequate Safeguards From Harmful and Exploitative Content**

14           74. As designed, Snapchat, Instagram and Facebook algorithms are not reasonably  
15 safe because they affirmatively direct minor users to harmful and exploitative content while  
16 failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It  
17 is feasible to design an algorithm that substantially distinguishes between harmful and innocuous  
18 content and protects minor users from being exposed to harmful content without altering,  
19 modifying, or deleting any third-party content posted on Defendants' social media products. The  
20 cost of designing Defendants' algorithms to incorporate this safeguard would be negligible while  
21 benefit would be high in terms of reducing the quantum of mental and physical harm sustained  
22 by minor users and their families.

1           75. Reasonable users (and their parents) would not expect that Defendants' products  
2 would direct them to harmful content.

3 **B. Failure to Verify Minor Users' Age and Identity**

4           76. As designed, Defendants' products are not reasonably safe because they do not  
5 provide for adequate age verification by requiring users to document and verify their age and  
6 identity.

7           77. Adults frequently set up user accounts on Defendants' social media products  
8 posing as minors to groom unsuspecting minors to exchange sexually explicit content and  
9 images, which frequently progresses to sexual exploitation and trafficking.

10           78. Minor users of social media and their parents do not reasonably expect that  
11 prurient adults set up fraudulent accounts on Defendants' social media products and pose as  
12 minors for malign purposes.

13           79. Reasonably accurate age and identify verification is not only feasible but widely  
14 deployed by on-line retailers and internet service providers.

15           80. The cost of incorporating age and identify verification into Defendants' products  
16 would be negligible whereas the benefit of age and identity verification would be a substantial  
17 reduction in severe mental health harms, sexual exploitation, and abuse among minor users of  
18 Defendants' products.

19 **C. Inadequate Parental Control and Monitoring**

20           81. Defendants' products are also defective for lack of parental controls, permission,  
21 and monitoring capability available on many other devices and applications.

**D. Intentional Direction of Minor Users to Harmful and Exploitative Content**

82. Default “recommendations” communicated to new teenage users, including plaintiff, purposefully steered Plaintiff toward content Defendants knew to be harmful to children of his age and gender.

**E. Inadequate Protection of Minors from Sexual Exploitation and Abuse**

83. Defendants’ products are not reasonably safe because they do not protect minor users from sexually explicit content and images or report sex offenders to law enforcement or allow users’ parents to readily report abusive users to law enforcement.

84. Parents do not expect their children will use Defendants’ products to exchange sexually explicit content and images and minor users do not expect that prurient adults pose as minors for malign purposes or that exchange of such content will be deleterious to their personal safety and emotional health.

85. Minor users of Defendants’ products lack the cognitive ability and life experience to identify on-line grooming behaviors by prurient adults and psychosocial maturity to decline invitations to exchange salacious material.

86. Defendants’ products are unreasonably dangerous and defective as designed because they allow minor children to use “public” profiles, in many cases default “public” profiles, that can be mass messaged by anonymous and semi-anonymous adult users for the purposes of sexual exploitation, and grooming, including the sending of encrypted, disappearing messages and cash rewards through Defendants’ integrated design features.

**F. Design of Addictive Social Media Products**

87. As designed, Defendants’ social media products are addictive to minor users as follows: When minors use design features such as “likes” it cause their brains release dopamine

1 which creates short term euphoria. However, as soon as dopamine is released, minor users'  
2 brains adapt by reducing or “downregulating” the number of dopamine receptors that are  
3 stimulated and their euphoria is countered by dejection. In normal stimulatory environments, this  
4 dejection abates, and neutrality is restored. However, Defendants’ algorithms are designed to  
5 exploit users’ natural tendency to counteract dejection by going back to the source of pleasure  
6 for another dose of euphoria. As this pattern continues over a period of months and the  
7 neurological base line to trigger minor users’ dopamine responses increases, they continue to use  
8 Instagram, not for enjoyment, but simply to feel normal. Once they stop using Instagram, minor  
9 users experience the universal symptoms of withdrawal from any addictive substance including  
10 anxiety, irritability, insomnia, and craving.

11 88. Addictive use of social media by minors is psychologically and neurologically  
12 analogous to addiction to internet gaming disorder as described in the American Psychiatric  
13 Association's 2013 *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which is  
14 used by mental health professionals to diagnose mental disorders. Gaming addiction is a  
15 recognized mental health disorder by the World Health Organization and International  
16 Classification of Diseases and is functionally and psychologically equivalent to social media  
17 addition.

18 89. The diagnostic symptoms of social media addiction among minors are the same as  
19 the symptoms of addictive gaming promulgated in DSM 5 and include:

20 90. Preoccupation with social media and withdrawal symptoms (sadness, anxiety,  
21 irritability) when device is taken away or not possible (sadness, anxiety, irritability).

22 91. Tolerance, the need to spend more time using social media to satisfy the urge.

23 92. Inability to reduce social media usages, unsuccessful attempts to quit gaming.

1           93.     Giving up other activities, loss of interest in previously enjoyed activities due to  
2 social media usage.

3           94.     Continuing to use social media despite problems.

4           95.     Deceiving family members or others about the amount of time spent on social  
5 media.

6           96.     The use of social media to relieve negative moods, such as guilt or hopelessness;  
7 and

8           97.     Jeopardized school or work performance or relationships due to social media  
9 usage.

10          98.     Defendants' advertising profits are directly tied to the amount of time that its  
11 users spend online, and their algorithms are designed to maximize the time users spend using the  
12 product by directing them to content that is progressively more and more stimulative.  
13 Defendants enhance advertising revenue by maximizing users' time online through a product  
14 design that addicts them to the platform. However, reasonable minor users and their parents do  
15 not expect that on-line social media platforms are psychologically and neurologically addictive.

16          99.     It is feasible to make Defendants' products to report the frequency and duration of  
17 their minor users' screen time to their parents without disclosing the content of communications  
18 at negligible cost. This would enable parents to track the frequency, time and duration of their  
19 minor child's social media, identify and address problems arising from such use, and better  
20 exercise their parental rights and responsibilities to limit the types of use that Defendants' own  
21 internal research identifies as problematic to users' health and well-being.

## **G. Inadequate Notification of Parents of Dangerous and Problematic Social Media Usage by Minor Users**

100. Defendants' products are not reasonably safe as designed because they do not include any safeguards to notify users and their parents of usage that Defendants know to be problematic and likely to cause negative mental health effects to users, including excessive passive use and use disruptive of normal sleep patterns. This design is defective and unreasonable because:

101. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive or occurs during sleep time. It is feasible for Defendants to design products that identify a significant percentage of its minor users who are using the product more than three hours per day or using it during sleeping hours at negligible cost.

102. Defendants' products are not reasonably safe as designed because, despite numerous reported instances of child sexual solicitation and exploitation by adult users, Defendants have not undertaken reasonable design changes to protect underage users from this abuse, including notifying parents of underage users when they have been messaged or solicited by an adult user or when a user has sent inappropriate content to minor users. Defendants' entire business is premised upon collecting and analyzing user data and it is feasible to use Defendants' data and algorithms to identify and restrict improper sexual solicitation, exploitation and abuse by adult users; and

103. It is reasonable for parents to expect that platforms such as Instagram, which actively promote their services to minors, will undertake reasonable efforts to identify users suffering from mental injury, self-harm, or sexual abuse and implement technological safeguards to notify parents by text, email, or other reasonable means that their child is in danger.

104. As a result of these dangerous and defective design attributes of Defendants' products, Plaintiff M.K. suffered severe mental harm, leading to physical injury, from her use of Instagram and Snapchat.

105. As a result of these dangerous and defective design attributes of Defendants' products, Plaintiff M.K. has suffered and continues to suffer serious damages in the form of emotional distress, diagnosed mental health conditions, medical expenses, loss of income and earning capacity, pain and suffering, and reputational harm.

106. As a result of these dangerous and defective design attributes of Defendants' products, Plaintiff Doffing has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

107. Defendants are further liable to Plaintiff for punitive damages based upon the willful and wanton design of their products that were intentionally marketed and sold to underage users, whom they knew would be seriously harmed through their use of Instagram and Snapchat.

**COUNT II – STRICT PRODUCT LIABILITY (Failure to Warn)**

108. Plaintiff realleges each and every allegation contained in paragraphs 1 through 99 as if fully stated herein.

109. Defendants' social media products rely on highly complex and proprietary algorithms that are both undisclosed and unfathomable to ordinary consumers who do not expect that social media platforms are physically and/or psychologically addictive.

110. The magnitude of harm from addiction to Defendants' products is horrific ranging from simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe depression, anxiety, self-harm, and suicide.

1           111. The harms resulting from minors' addictive use of social media platforms have  
2 been not only well- documented in the professional and scientific literature, but Meta had actual  
3 knowledge of such harms. On information and belief, Snap also has conducted internal studies  
4 documenting the addictive quality and harmful effects of its social media products on minor  
5 users.

6           112. Defendants' products are unreasonably dangerous because they lack any warnings  
7 that foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents  
8 when their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive  
9 screen time is harmful adolescents' mental health and sleep patterns and emotional well-being.  
10 Reasonable and responsible parents are not able to accurately monitor their child's screen time  
11 because most adolescents own or can obtain access to mobile devices and engage in social media  
12 use outside their parents' presence.

13           113. It is feasible for Defendants' products to report the frequency and duration of their  
14 minor users' screen time to their parents without disclosing the content of communications at  
15 negligible cost, which would enhance parents' ability to track the frequency, time and duration of  
16 their minor child's social media use and allow them to identify and address problems arising  
17 from such use and to better exercise their rights and responsibilities as parents.

18           114. Defendants knew about these harms, knew that users and parents would not be  
19 able to safely use their products without warnings, and failed to provide warnings that were  
20 adequate to make the products reasonably safe during ordinary and foreseeable use by children.

21           115. As a result of Defendants' failure to warn, Plaintiff M.K. suffered severe mental  
22 harm, leading to physical injury, from her use of Instagram and Snapchat.  
23

1           116. As a result of Defendants’ failure to warn, Plaintiff M.K. has suffered and  
2 continues to suffer serious damages in the form of emotional distress, diagnosed mental health  
3 conditions, medical expenses, loss of income and earning capacity, pain and suffering, and  
4 reputational harm.

5           117. As a result of Defendants’ failure to warn, Plaintiff Doffing has suffered loss of  
6 consortium, emotional distress, past and future medical expenses, and pain and suffering.

7           118. Defendants are further liable to Plaintiff for punitive damages based upon their  
8 willful and wanton failure to warn of known dangers of their products that were intentionally  
9 marketed and sold to teenage users, whom they knew would be seriously harmed through their  
10 use of Instagram and Snapchat.

11                           **COUNT III – NEGLIGENCE (Common Law)**

12           119. Plaintiff realleges each and every allegation contained in paragraphs 1 through  
13 110 as if fully stated herein.

14           120. At all relevant times, Defendants had a duty to exercise reasonable care and  
15 caution for the safety of individuals using their products, such as Plaintiff M.K.

16           121. Defendants owe a heightened duty of care to minor users of their social media  
17 products because adolescents’ brains are not fully developed, which results in a diminished  
18 capacity to make good decisions regarding their social media usages, eschew self-destructive  
19 behaviors, and overcome emotional and psychological harm from negative and destructive social  
20 media encounters. Defendants intentionally designed and marketed their social media platforms  
21 to be both attractive and harmful to underage users, sometimes referred to an “attractive  
22 nuisance.” Rather than take reasonable precautions to prevent children from harmful and  
23

1 problematic behaviors, Defendant intentionally designed its platforms to attract and addict  
2 vulnerable child users.

3 122. As California product manufacturers marketing and selling products to residents  
4 of Oregon, Defendants owed a duty to exercise ordinary care in the manufacture, marketing, and  
5 sale of their products, including a duty to warn minor users and their parents of hazards that  
6 Defendants knew to be present, but not obvious, to underage users and their parents.

7 123. As business owners, Defendants owe their users who visit Defendants' social  
8 media platform and from whom Defendants derive billions of dollars per year in advertising  
9 revenue a duty of ordinary care substantially similar to that owed by physical business owners to  
10 their business invitees. Defendant Meta has acknowledged that it considers itself to be a digital  
11 premises owner by changing its name to Meta, in reference to the "metaverse," and likening its  
12 platforms to physical places where it intends for its users to visit for Meta's financial gain.

13 124. Defendants were negligent, grossly negligent, reckless and/or careless in that they  
14 failed to exercise ordinary care and caution for the safety of underage users, like M.K., using  
15 their Instagram and Snapchat products.

16 125. Defendants were negligent in failing to conduct adequate testing and failing to  
17 allow independent academic researchers to adequately study the effects of their products and  
18 levels of problematic use amongst teenage users. Defendants' have extensive internal research  
19 indicating that their products are harmful, cause extensive mental harm and that minor users are  
20 engaging in problematic and addictive use that their parents are helpless to monitor and prevent.

21 126. Defendants were negligent in failing to provide adequate warnings about the  
22 dangers associated with the use of social media products and in failing to advise users and their  
23 parents about how and when to safely use their social media platforms and features.

127. Defendants were negligent in failing to fully assess, investigate, and restrict the use of Instagram and Snapchat by adults to sexually solicit, abuse, manipulate, and exploit minor users of their Instagram and Snapchat products.

128. Defendants were negligent in failing to provide users and parents the tools to ensure their social media products were used in a limited and safe manner by underage users.

129. Defendants were negligent as digital premises owners who knew or should have known that (1) underage users would be attracted to visit their Instagram and Snapchat websites and mobile platforms, (2) underage users were at heightened risk of harm from content, features, and actions by third-party users that existed on Instagram and Snapchat, (3) Defendants created and/or maintained the dangerous features or conditions that posed a risk to children, and (4) Defendants failed to take reasonable precautions to prevent children from accessing their digital premises, remediate the unsafe conditions, and/or adequately warn minor users and their parents about the dangerous conditions they knew or should have known existed on Instagram and Snapchat.

130. As a result of Defendants' negligence, Plaintiff M.K. suffered severe mental harm, leading to physical injury, from her use of and exposure to Instagram and Snapchat.

131. As a result of Defendants' negligence, Plaintiff M.K. has suffered and continues to suffer serious damages in the form of emotional distress, diagnosed mental health conditions, medical expenses, loss of income and earning capacity, pain and suffering, and reputational harm.

132. As a result of Defendants' negligence, Brittney Doffing has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

1           133. Defendants are further liable to Plaintiff for punitive damages based upon their  
2 willful and wanton conduct toward M.K. and other underage users whom they knew would be  
3 seriously harmed through the use of Instagram and Snapchat.

4           **VII. COUNT IV – SEXUAL DISCRIMINATION BY A PLACE OF PUBLIC**  
5           **ACCOMMODATION (ORS 659A.403) (as to M.K. only)**

6           134. Plaintiff realleges each and every allegation contained in paragraphs 1 through  
7 125 as if fully stated herein.

8           135. Defendants Instagram and Snapchat social media platforms are places of public  
9 accommodation under Oregon law, ORS 659A.400.

10           136. Defendants engaged in sexual discrimination toward users, including Plaintiff  
11 M.K., by using her gender (which Instagram and Snapchat request upon the creation of an  
12 account) to direct recommendations of accounts to follow and different and materially harmful  
13 content to female users, including content promoting unhealthy dieting, fitness, and other content  
14 proven to cause body dysmorphia, eating disorders, depression, and anxiety amongst teenage  
15 users.

16           137. Plaintiff subjectively perceived discrimination to M.K. in the nature and type of  
17 services provided by Defendants' platform to M.K. due to her female gender.

18           138. Defendants intentionally designed and implemented their Instagram and Snapchat  
19 services in way that resulted in distinction, discrimination, or restriction toward M.K. and other  
20 teenage female users on account or their sex and/or gender.

21           139. Based upon M.K.'s female gender and appearance, Defendants further selected  
22 and provided posts, videos, and pictures to adult male users who, through their prior activity on  
23 the platforms, were directed toward content posed by underage female users. As a result of  
Defendants' discriminatory treatment and usage of M.K.'s minor female-related content (in order

1 to profit by driving user engagement and views at any cost), multiple adult male users  
2 improperly and illegally messaged and solicited M.K. for the purposes of sexual abuse,  
3 exploitation, and sexually explicit material involving a minor child. In orders words, Defendants  
4 knowingly operated a matching service that profited from matching underage teenage users with  
5 adult sexual predators.

6 140. As a result of Defendants' sexual discrimination, Plaintiff M.K. suffered severe  
7 mental harm, leading to physical injury, from her use of and exposure to Instagram and  
8 Snapchat.

9 141. As a result of Defendants' sexual discrimination, Plaintiff M.K. has suffered and  
10 continues to suffer serious damages in the form of emotional distress, diagnosed mental health  
11 conditions, medical expenses, loss of income and earning capacity, pain and suffering, and  
12 reputational harm.

13 142. Pursuant to ORS 659A.885(8), Plaintiff M.K. is entitled to full compensatory and  
14 punitive damages against Defendants as a result of their intentional and unlawful sexual  
15 discrimination. Defendants are further jointly and severally liable for punitive damages and  
16 attorneys' fees and costs based upon their knowing, intentional, willful, and wanton gender-  
17 based discrimination toward M.K. and other teenage users whom they knew would be seriously  
18 harmed through unlawful sexual discrimination on Instagram and Snapchat.

19 **VIII. COUNT V – VIOLATION OF 47 U.S.C. § 1595**

20 143. Plaintiff realleges each and every allegation contained in paragraphs 1 through  
21 134 as if fully stated herein.

144. Plaintiff also bring claims under 47 U.S.C. § 1595 based Defendants' financial benefit garnered from knowingly assisting, supporting, facilitating sexual solicitation and exploitation of minor children.

145. Defendants are aware of, and knowingly benefit, from a large number of predatory users who regularly use Defendants' platforms to solicit and groom minor users into sexually compromising situations and lure them into being sexually exploited and trafficked.

146. Defendants have failed to undertake reasonable efforts to redesign their social media platforms to protect their minor users against such harms.

147. As a result of Defendants' violations of 47 U.S.C. § 1595, Plaintiff M.K. suffered severe mental harm, leading to physical injury, from sexual exploitation and solicitation directed toward her through Instagram and Snapchat.

148. As a result of Defendants' violations of 47 U.S.C. § 1595, Plaintiff M.K. has suffered and continues to suffer serious damages in the form of emotional distress, diagnosed mental health conditions, medical expenses, loss of income and earning capacity, pain and suffering, and reputational harm.

149. As a result of Defendants' violations of 47 U.S.C. § 1595, Brittney Doffing has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

150. As a result of Defendants' violations of 47 U.S.C. § 1595, Plaintiff is entitled to full compensatory and punitive damages against Defendants for the mental and physical injuries suffered by M.K. and Doffing. Defendants are further jointly and severally liable to Plaintiff for punitive damages and attorneys' fees and costs based upon their knowing, intentional, willful, and wanton conduct toward M.K. and other teenage users whom they knew were being seriously

1 harmed through improper solicitation and exploitation of a sexual nature through Instagram and  
2 Snapchat.

3 **DEMAND FOR JURY TRIAL**

4 Plaintiff hereby demands a trial by jury.

5 **PRAYER FOR RELIEF**

6 WHEREFORE, Plaintiff prays for judgment against Defendant for monetary damages  
7 and/or injunctive relief for the following harm:

- 8 1. Past physical and mental pain and suffering of M.K., in an amount to be more readily  
9 ascertained at the time and place set for trial;
- 10 2. Loss of enjoyment of life, in an amount to be more readily ascertained at the time and  
11 place set for trial;
- 12 3. Past and future medical care expenses for the care and treatment of the injuries  
13 sustained by M.K., in an amount to be more readily ascertained at the time and place  
14 set for trial.
- 15 4. Past and future impairment to capacity to perform everyday activities;
- 16 5. Plaintiff's pecuniary loss and loss of M.K.'s services, comfort, care, society and  
17 companionship to Doffing;
- 18 6. Loss of future income and earning capacity of M.K.;
- 19 7. Punitive damages;
- 20 8. For injunctive relief ordering Defendants to remedy the unreasonably dangerous  
21 algorithms in their social media products and provide warnings to minor users and  
22 their parents that Defendants 'social media products are addictive and pose a clear  
23 and present danger to unsuspecting minors.

9. For the reasonable costs and attorney and expert/consultant fees incurred in prosecuting this action; and

10. For such other and further relief as this Court deems just and equitable.

DATED this 20<sup>th</sup> day of January 2022

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users,

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Tennessee and purposely avail themselves of the benefits of transacting business with Tennessee residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Tennessee and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Tennessee relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Tennessee.

18. Defendants advertise extensively in Tennessee, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing

its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Tennessee for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Tennessee-related activities over the last several years arising from their defective and inherently dangerous social media products by Tennessee residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Middle District of Tennessee.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Ayla Tanton is an individual residing in Mount Juliet, Tennessee, and the mother and custodial parent of her fifteen-year-old daughter M.R. Plaintiff brings this suit on behalf of herself and on behalf of M.R., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta's feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the "attention economy,"<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its "Like" button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon

the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has

expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta's own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user's News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that "[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news," with one data scientist noting that "[t]his is an increasing liability." In other internal memos, Meta concluded that because of the new algorithm, "[m]isinformation, toxicity, and violent content are inordinately prevalent." Other documents show that Meta employees also discussed Meta's motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta's bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta's algorithm optimizes for angry, divisive, and polarizing content because it'll increase its number of users and the time users stay on the platform

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff M.R. is a fifteen-year-old girl who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). M.R.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to M.R. 24 hours a day, M.R. began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to M.R., a minor user of the Meta platform(s), M.R. subsequently developed injuries including, but not limited to, multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Ayla Tanton from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Ayla Tanton.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Ayla Tanton nor M.R. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when M.R. began to use the products.

70. Defendants not only failed to warn M.R. and Ayla Tanton of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the

safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of M.R.'s extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus,

ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;

- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

98. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information,

research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate

information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, "Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off."<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users' mental health.

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> Id.

By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child’s natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose

weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION  
PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body

dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

155. A reasonable company under the same or similar circumstances would have designed a safer product.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

157. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
167. Facebook and Instagram are also defective for failing to warn users that:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and

- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles,

which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and

young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **EIGHTH CAUSE OF ACTION** **NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

221. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth,

such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power

to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them.”<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users’ mental and physical health, which Meta has long known.

237. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- i. Facebook makes body-image issues worse for one-third of girls;
- j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- m. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- n. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the

use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION  
FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION**  
**UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
  - j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
  - l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;

- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. TENN. CODE ANN. § 47-18-101 *et seq.* (Tennessee Consumer Protection Act of 1977).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

320. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to

DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms' agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms' implied warranties. The platforms' products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS' breach of these warranties were a substantial factor in causing Plaintiff's harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION  
INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook

and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among

other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes multiple periods of suicidal ideation, self-harm (e.g., cutting herself), an eating disorder(s), severe anxiety, depression, and a reduced inclination or ability to sleep, among other harms, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION**  
**MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;

- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such

as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse

(prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;

6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

Dated: June 6, 2022

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users,

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Texas and purposely avail themselves of the benefits of transacting business with Texas residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Texas and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Texas relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Texas.

18. Defendants advertise extensively in Texas, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to

be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Texas for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Texas-related activities over the last several years arising from their defective and inherently dangerous social media products by Texas residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Northern District of Texas.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Stephanie Carter is an individual residing in Dallas, Texas, and the grandmother and custodial guardian of her 17-year-old granddaughter F.M. Plaintiff brings this suit on behalf of herself and on behalf of F.M. pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta's feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the "attention economy,"<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its "Like" button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon

the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has

expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta's own ethical limits, with the following chart:<sup>7</sup>

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental

health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate

---

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff F.M. is a seventeen-year-old girl who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). F.M.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to F.M. 24 hours a day, F.M. began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to F.M., a minor user of the Meta platform(s), F.M. subsequently developed injuries including, but not limited to, social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Stephanie Carter from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Stephanie Carter.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Stephanie Carter nor F.M. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when F.M. began to use the products.

70. Defendants not only failed to warn F.M. and Stephanie Carter of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of F.M.'s extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder,

anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;

- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

98. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information,

research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate

information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, "Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off."<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users' mental health.

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child’s natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose

weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body

dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

155. A reasonable company under the same or similar circumstances would have designed a safer product.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

157. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers

of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

167. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a

danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected,

tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based

ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social

comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;

- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;

- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

221. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are

- i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by

suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal

ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what

matters to them.”<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users’ mental and physical health, which Meta has long known.

237. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
  - h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
  - i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
241. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;

- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior

knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION** **FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION  
VIOLATION OF UNFAIR TRADE  
PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of

their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. TEX. BUS. & COM. CODE ANN. § 17.41 *et seq.* (Deceptive Trade Practices-Consumer Protection Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

320. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media addiction, anxiety, body dysmorphia, depression, multiple periods of suicidal ideation, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION**  
**MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully

until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 21, 2022

Respectfully Submitted,

**Defendants To Be Served as Follows:**

## **I. Introduction**

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies’ profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. (“Meta”). Meta was originally incorporated in Delaware on July 29, 2004, as “TheFacebook, Inc.” On September 20, 2005, the company changed its name to “Facebook, Inc.” On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta’s and its subsidiaries’ own documents, public representations, and lack of public information. However,

upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand “Meta” contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks’ overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is knowledge solely within Defendants’ possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world’s largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world’s most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta’s data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user’s activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta’s user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the [www.Facebook.com](https://www.facebook.com) ("Facebook") and [www.Instagram.com](https://www.instagram.com) ("Instagram") websites and respective interrelated apps (collectively "Meta 2"), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta's creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta's growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world's social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

7. A user's "feed" on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a "discover" page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users' data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps "menu" and "watch" sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants’ defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants’ products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants’ failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants’ unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants’ products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta’s increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users’ engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Texas and purposely avail themselves of the benefits of transacting business with Texas residents. Plaintiff’s claims set forth herein arise out of and/or relate to Defendants’ activities in the State of Texas and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Texas relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Texas.

18. Defendants advertise extensively in Texas, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and

devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Texas for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Texas-related activities over the last several years arising from their defective and inherently dangerous social media products by Texas residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Southern District of Texas.

### III. PARTIES

#### **Plaintiff**

21. Plaintiff Nadia Camacho is an adult individual residing in Houston, Texas.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland);

Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants’ algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users’ dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta's feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the "attention economy,"<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its "Like" button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon

the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has

expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Nadia Camacho is a nineteen year old woman who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the clinically addictive and mentally harmful effects of Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

25

listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

86. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

87. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

89. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or

lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

97. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **SECOND CAUSE OF ACTION** **STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

105. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of

reality, and suffer injuries including multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third parties. Meta has a “Youth Portal” website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

118. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and

defectively leaves it to individuals' research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a "Youth Portal" website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook's and Instagram's individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to "help young people become empowered in a digital world," its "Wellness" subpage lists five activities, "mindful breathing," "finding support," "building resilience: finding silver linings," "a moment for me," and "taking a break."<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms' lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION**

#### **STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- 37

- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION  
PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2)

intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;

- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision,

eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

166. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

48

182. Without limitation, examples of DEFENDANTS’ breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices (“GMPs”);
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms’ output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff’s harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video

filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user;

where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

203. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

205. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;

- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes multiple periods of suicidal ideation, an eating

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harms.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them>.

236. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;
  - p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and

- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the

platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **ELEVENTH CAUSE OF ACTION CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

276. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **TWELFTH CAUSE OF ACTION**

### **UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of

their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. TEX. BUS. & COM. CODE ANN. § 17.41 *et seq.* (Deceptive Trade Practices-Consumer Protection Act).

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

335. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

336. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

337. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

338. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **SIXTEENTH CAUSE OF ACTION** **FITNESS FOR A PARTICULAR PURPOSE**

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

341. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

348. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

350. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

393. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

394. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

396. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

398. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes multiple periods of suicidal ideation, an eating disorder(s), eating-disorder-induced bradycardia, depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

410. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully

until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

428. As a result of DEFENDANTS’ fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS’ acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys’ fees;
8. Awarding experts’ fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

# Exhibit A-28

**United States District Court  
Eastern District of Wisconsin (Milwaukee)  
CIVIL DOCKET FOR CASE #: 2:22-cv-00444-JPS**

Dawley v. Meta Platforms Inc et al  
Assigned to: Judge J P Stadtmueller  
Cause: 28:1332 Diversity-Personal Injury

Date Filed: 04/11/2022  
Jury Demand: Plaintiff  
Nature of Suit: 365 Personal Inj. Prod. Liability  
Jurisdiction: Diversity

UNITED STATES DISTRICT COURT  
EASTERN DISTRICT OF WISCONSIN

DONNA DAWLEY, individually and Personal  
Representative of the ESTATE OF  
CHRISTOPHER J. DAWLEY

Plaintiffs,

v.

META PLATFORMS, INC., formerly known  
as FACEBOOK, INC.; SNAP, INC.

Defendants.

NO.

COMPLAINT FOR WRONGFUL  
DEATH AND SURVIVORSHIP

JURY DEMAND

In these digital public spaces, which are privately owned and tend to be run for profit, there can be tension between what's best for the technology company and what's best for the individual user or for society. Business models are often built around maximizing user engagement as opposed to safeguarding users' health and ensuring that users engage with one another in safe and healthy ways. . . . Technology companies must step up and take responsibility for creating a safe digital environment for children and youth. Today, most companies are not transparent about the impact of their products, which prevents parents and young people from making informed decisions and researchers from identifying problems and solutions.

United States Surgeon General's Advisory  
December 7, 2021

1 Plaintiff DONNA DAWLEY, is the mother of Christopher J. Dawley who died of suicide  
2 on January 4, 2015, and brings this action for wrongful death and survivorship against Meta  
3 Platforms, Inc., formerly known as Facebook, Inc. (“Facebook”), doing business as Instagram  
4 (“Instagram”) and Snap, Inc. doing business as Snap Chat and alleges as follows:

5 **I. INTRODUCTION**

6 1. This product liability action seeks to hold Defendants’ products responsible for  
7 causing and contributing to burgeoning mental health crisis perpetrated upon the children and  
8 teenagers in the United States by Defendants and, specifically, for the death by suicide of  
9 Christopher J. Dawley on January 4, 2015, caused by his addictive use of Defendants’  
10 unreasonably dangerous and defective social media products.

11 2. On December 7, 2021, the United States Surgeon General issued an advisory  
12 cataloging a dramatic increase in teen mental health crises including suicides, attempted suicides,  
13 eating disorders, anxiety, depression, self-harm and inpatient admissions. Between 2007 and  
14 2018, for example, suicide rates among youth ages twelve to sixteen in the U.S. increased a  
15 staggering 146 percent!

16 3. The most significant and far-reaching change to the lives of young people during  
17 this period was the widespread adoption of mobile social media platforms, prominently the  
18 Instagram, Snapchat and Facebook products designed and distributed by Defendants. By 2014,  
19 80 percent of high-school students said they used a social-media platform daily, and 24 percent  
20 said that they were online “almost constantly.” Many children and teenagers spend hours  
21 throughout the day and night using Defendants’ products.

22 4. Peer reviewed studies and the available medical science have identified a  
23 particular type of social media and electronic device use associated with major mental health

1 injuries, including depression, self-harm, eating disorders, suicide attempts and ideation,  
2 dissatisfaction with life, depression and sleep deprivation. Both large observational studies and  
3 experimental results point to the heavy use of Defendants' social media products as a cause of  
4 increased depression, suicidal ideation, and sleep deprivation among teenagers, particularly  
5 teenage girls.

6 5. Defendants' own research also points to the use of Defendants' social media  
7 products as a cause of increased depression, suicidal ideation, sleep deprivation, and other,  
8 serious harms. Meta researchers, for example, found that Instagram is "worse" than many  
9 competitor products and "is seen as having the highest impact [on negative body and appearance  
10 comparison], although TikTok and SnapChat aren't far behind."

11 6. Moreover, Defendants have invested billions of dollars to intentionally design and  
12 develop their products to encourage, enable, and push content to teens and children that  
13 Defendants know to be problematic and highly detrimental to their minor users' mental health.

14 7. Internal, non-public data collected by Instagram and Facebook reveal large  
15 numbers of its users are engaging in problematic use of its products. Indeed, the problematic use  
16 identified in the medical literature is precisely the type of use Defendants have designed their  
17 products to encourage through psychological manipulation techniques—sometimes referred to as  
18 persuasive design—that is well-recognized to cause all the hallmarks of clinical addiction.

19 8. Likewise, each of Defendants' products contain unique product features which are  
20 intended to and do encourage addiction, and unlawful content and use of said products, to the  
21 detriment of Defendants' minor users.

22 9. Plaintiff brings claims of strict liability based upon Defendants' defective design  
23 of their social media products that renders such products not reasonably safe for ordinary

1 consumers in general and minor users in particular. It is technologically feasible to design social  
2 media products that substantially decrease both the incidence and magnitude of harm to ordinary  
3 consumers and minors arising from their foreseeable use of Defendants' products with a  
4 negligible increase in production cost.

5 10. Plaintiffs also bring claims for strict liability based on Defendants' failure to  
6 provide adequate warnings to minor users and their parents of danger of mental, physical, and  
7 emotional harms arising from foreseeable use of their social media products. The addictive  
8 quality of Defendants' products and their harmful algorithms are unknown to minor users and  
9 their parents.

10 11. Plaintiffs also bring claims for common law negligence arising from Defendants'  
11 unreasonably dangerous social media products and their failure to warn of such dangers.  
12 Defendants knew, or in the exercise of ordinary care should have known, that their social media  
13 products were harmful to a significant percentage of their minor users and failed to re-design  
14 their products to ameliorate these harms or warn minor users and their parents of dangers arising  
15 out of the foreseeable use of their products.

16 12. Plaintiff also brings claims under Wis. Stat § 100.18 based on Defendants unfair  
17 and deceptive trade practices in the marketing addictive social media products to unsuspecting  
18 minors.

## 19 II. PARTIES

20 13. Plaintiff DONNA DAWLEY resides in Salem, Wisconsin, is the mother of  
21 Christopher J. Dawley and will soon be appointed Personal Representative of his Estate.

22 14. Plaintiff DONNA DAWLEY has not entered into a User Agreement or other  
23 contractual relationship with any of the Defendants herein. As such, in prosecuting this action

1 Plaintiff is not bound by any arbitration, forum selection, choice of law or class action waiver set  
2 forth in said User Agreements. Further, as Personal Representative of the Estate of CJ Dawley,  
3 Plaintiff expressly disaffirms any User Agreements with Defendants which CJ Dawley may have  
4 accepted, which would have been entered into prior to his reaching the age of majority.

5 15. Defendant Meta Platforms, Inc., formerly known as Facebook, Inc., is a Delaware  
6 corporation with its principal place of business in Menlo Park, CA. Defendant Meta Platforms  
7 owns and operates the Facebook and Instagram social media platforms, that are widely available  
8 to users throughout the United States.

9 16. Defendant Snap, Inc. is a Delaware corporation with its principal place of  
10 business in Venice Beach, CA. Defendant Snap Inc. owns and operates the Snapchat social  
11 media platform, an application that is widely marketed by Snap Inc. and available to users  
12 throughout the United States.

### 13 **III. JURISDICTION AND VENUE**

14 17. This Court has subject-matter jurisdiction over this case under 28 U.S.C. §  
15 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are  
16 residents of different states. Venue is proper in this District under 28 U.S.C. § 1391(b)(2)  
17 because a substantial part of the events giving rise to the claim occurred in the Eastern District of  
18 Wisconsin.

19 18. This Court has specific personal jurisdiction over Defendants Meta and Snap  
20 because these Defendants transact business in the State of Wisconsin and purposefully avail  
21 themselves of the benefits of transacting business with Wisconsin residents; Plaintiff's claims set  
22 forth herein arise out of and/or relate to Defendants' activities in the State of Wisconsin and  
23

1 purposeful availment of the benefits of transacting business here and the exercise of personal  
2 jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

3 19. Defendants have contracts with a significant percentage of the population of the  
4 State of Wisconsin relating to use of the products at issue in this case, and interact extensively  
5 with, send messages, notifications, and communications to, and provide a myriad of other  
6 interactive services and recommendations to users Defendants expect and know to be in the State  
7 of Wisconsin.

8 20. Defendants advertises extensively in Wisconsin, through contractual relationships  
9 with third party “partners” who advertise on their behalf via electronic platforms and devices.  
10 Defendants Meta also has agreements with cell phone manufacturers and/or providers and/or  
11 retailers, who often pre-install its products on mobile devices prior to sale and without regard to  
12 the age of the intended user of each such device. That is, even though Defendants are prohibited  
13 from providing their products to users under the age of 13, by encouraging and allowing its  
14 product to be installed indiscriminately on mobile devices, it actively promotes and provides  
15 access to its product to the underage users in Wisconsin for whom those devices are intended.

16 21. Defendants have earned millions of dollars in annual revenue from their  
17 Wisconsin-related activities over the last several years arising from their defective and inherently  
18 dangerous social mediaproducts by Wisconsin residents, including children like Christopher J.  
19 Dawley.

#### 20 **IV. FACTUAL ALLEGATIONS**

##### 21 **A. Facebook and Instagram Background**

22 22. Facebook is an American online social network service that is part of the  
23 Defendant Meta Platforms. Facebook was founded in 2004 and became the largest social

1 network in the world, with nearly three billion users as of 2021, and about half that number were  
2 using Facebook every day. The company's headquarters are in Menlo Park, California.

3 23. Instagram is a photo sharing social media application that originally enabled users  
4 to post and share photos that could be seen by other users who "follow" the user. A user's  
5 followers could "like" and post comments on the photos. Instagram was purchased by Facebook,  
6 Inc. for approximately \$1B in 2012.

7 24. Facebook recently changed its name to, and is referred to herein and collectively  
8 with Instagram, as Meta.

9 25. A user's "feed" is comprised of a series of photos and videos posted by accounts  
10 that the user follows, along with advertising and content specifically selected and promoted by  
11 Instagram. Meta exerts control over a user's Instagram "feed," including through certain ranking  
12 mechanisms, escalation loops, and/or promotion of advertising and content specifically selected  
13 and promoted by Meta based on, among other things, its ongoing planning, assessment, and  
14 prioritization of the types of information most likely to increase engagement – which, in the case  
15 of certain groups of users, including teens, translates to Meta's deliberate and repeated  
16 promotion of harmful and unhealthy content, which Meta knows or has reason to know is  
17 causing harm to its young users.

18 26. Instagram also features a "discover" feature where a user is shown an endless feed  
19 of content that is selected by an algorithm designed by Meta based upon the users' demographics  
20 and prior activity in the application. Again, Meta has designed its product in a manner such that  
21 it promotes harmful and/or unhealthy content. Meta is aware of these inherently dangerous  
22 product features and has repeatedly decided against changing them and/or implementing readily  
23

1 available and relatively inexpensive safety measures, for the stated purpose of ensuring  
2 continued growth, engagement, and revenue increase.

3 27. Users' profiles on Instagram may be public or private. On public profiles, any  
4 user is able to view the photos, videos, and other content posted by the user. On private profiles,  
5 the users' content may only be viewed by the user's followers, which the user is able to approve.  
6 During the relevant period, Instagram profiles were public by default and Instagram allowed all  
7 users to message and send follow request to underage users, including Decedent CJ Dawley.

8 28. Defaulting profiles to public served no critical purpose in terms of product  
9 functionality and/or a user's ability to access content. Instead, this product feature increased user  
10 engagement during onboarding (when a user first starts using Instagram) by increasing user  
11 connections. However, Meta also knew that harmful and/or undesirable, even dangerous,  
12 contacts could be made through this public setting feature, particularly for users under the age of  
13 18, including CJ Dawley.

14 29. During the last five years, Instagram has added features and promoted the use of  
15 short videos and temporary posts. The latter are referred to as "Reels" while the former is  
16 referred to as Instagram "Stories."

17 30. Based on individualized data collected from their users' social media habits,  
18 Instagram independently selects content for its users and notifies them of such content through  
19 text and email. Instagram's notifications to individuals users are specifically designed to and do  
20 prompt them to open Instagram and view the content selected by Instagram which increases the  
21 users screen time and resulting profits to Instagram.

1           31. Over time, Instagram has become the most popular photo sharing social media  
2 platform amongst teenagers and young adults in the United States with over 57 million users  
3 below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

4           **B. Snapchat Background**

5           32. Snapchat is a photo and short video sharing social media application that allows  
6 users to form groups and share posts or "Snaps" that disappear after being viewed by the  
7 recipients. The Snapchat product is well-known for its self-destructing content feature.  
8 Specifically, the Snapchat product allows users to form groups and share posts or "Snaps" that  
9 disappear after being viewed by the recipients.

10          33. Snapchat's self-destructing content design feature is specifically intended to  
11 appeal to minor users by evading parents' ability to monitor their children's social media activity  
12 in exercise of their parental responsibility. Snapchat's self-destructing content design feature  
13 permits minor users to exchange illegal and sexually explicit images with adults and provides  
14 sexual predators with a safe and efficient vehicle to recruit victims.

15          34. Snapchat also features a series of rewards including trophies, streaks, and other  
16 signals of social recognition similar to the "likes" metrics available across other platforms.  
17 These features are designed to encourage users to share their videos and posts with the public.  
18 Snapchat designed these features to be addictive, and they are. Users also have an "explore" feed  
19 that displays content created by other users around the world. The trophies, streaks, and other  
20 signals of social recognition that users receive is content neutral; users receive the same amount  
21 of rewards regardless of the content of the posts and videos they exchange,  
22  
23

1           35. All of these product features are designed to grab and keep users' attention for as  
2 long as possible each day, and have led many people, from psychologists to government  
3 officials, to describe Snapchat as "dangerously addictive."

4           36. Snapchat was founded in 2011 by current president and CEO Evan Spiegel and  
5 several other co-founders while they were attending Stanford University.

6           37. In 2014, Snapchat added "Stories" and "Chat" features that allowed users to post  
7 longer stories that could be viewed by users outside the user's friends. In 2014, Snapchat also  
8 released a feature called Snapcash that allowed users to send money to other users without regard  
9 to user age, identity verification, and/or parental consent.

10           38. Snapchat also allows users to enable the sharing of their location, through a tool  
11 called Snap Map, which allows the users followers (and the public for Snaps submitted by the  
12 users) to see the user's location on a map. This feature is available to all users, including minors.

13           39. By 2015, Snapchat had over 75 million monthly active users and was considered  
14 to be the most popular social media application amongst American teenagers in terms of number  
15 of users and time spent using the platform.

16           **C. Defendants' Applications Are Products**

17           40. Instagram, Facebook and Snapchat are products that are designed and  
18 manufactured by Meta and Snap, respectively. These products are designed to be used by minors  
19 and are actively marketed to minors across the United States including the State of Wisconsin.  
20 Further, Defendants are aware that large numbers of children under the age of 13 use their  
21 products despite user terms or "community standards" that purport to restrict use to individuals  
22 who are 13 and older.

1           41. In fact, these products are designed to be used by minors and are actively  
2 marketed to minors across the United States. Defendants market to minors through their own  
3 marketing efforts and design. But also, Defendants work with and actively encourage advertisers  
4 to create ads targeted at and appealing to teens, and even to children under the age of 13.  
5 Defendants spend millions researching, analyzing, and experimenting with young children to  
6 find ways to make their products more appealing and addictive to these age groups, as these age  
7 groups are seen as the key to Defendants' long-term profitability and market dominance.

8           42. Defendants are aware that large numbers of children under the age of 18 use their  
9 products without parental consent. They design their products in a manner that allows and/or  
10 does not prevent such use to increase user engagement and, thereby, their own profits.

11           43. Defendants are likewise aware that large numbers of children under the age of 13  
12 use their products despite user terms or "community standards" that purport to restrict use to  
13 individuals who are 13 and older. They have designed their products in a manner that allows  
14 and/or does not prevent such use to increase user engagement and, thereby, their own profits.

15           **D. Defendants' Business Model is Based on Maximizing User Screen Time**

16           44. Defendants advertise their products as "free," because they do not charge their  
17 users for downloading or using their products. What many users do not know is that, in fact,  
18 Defendants make a profit by finding unique and increasingly dangerous ways to capture user  
19 attention and target advertisements to their users. Defendants receive money from advertisers  
20 who pay a premium to target advertisements to specific demographic groups of users in the  
21 applications including, and specifically, users in Wisconsin under the age of 18.

22           45. Defendants generate revenue based upon the total time spent on the application,  
23 which directly correlates with the number of advertisements that can be shown to each user.

1           46.     Snapchat uses unknown and changing rewards that are designed to prompt users  
2 who consume Snapchat in excessive and dangerous ways. Snap knows or should know that its  
3 design has created extreme and addictive behaviors by its largely teenage and young-adult users.  
4 Indeed, Snap knowingly or purposefully designed its products to encourage such behaviors

5           47.     All the achievements and trophies in Snapchat are unknown to users. The  
6 Company has stated that “[y]ou don’t even know about the achievement until you unlock it.”  
7 This design conforms to well-established principles of operant conditioning wherein intermittent  
8 reinforcement provides the most reliable tool to maintain a desired behavior over time.

9           48.     This design is akin to a slot machine but marketed toward teenage users who are  
10 even more susceptible than gambling addicts to the variable reward and reminder system  
11 designed by Snap. The system is designed to reward increasingly extreme behavior because users  
12 are not actually aware of what stunt will unlock the next award.

13           49.     Instagram and Facebook, like Snapchat, are designed around a series of design  
14 features that do not add to the communication and communication utility of the application, but  
15 instead seek to exploit users’ susceptibility to persuasive design and unlimited accumulation of  
16 unpredictable and uncertain rewards, including “likes” and “followers.” In the hands of children,  
17 this design is unreasonably dangerous to the mental well-being of underage user’s developing  
18 minds.

19           50.     According to industry insiders, Defendants’ have employed thousands of  
20 engineers to help make their products maximally addicting. For example, Instagram’s “pull to  
21 refresh” is based on how slot machines operate. It creates an endless feed, designed to  
22 manipulate brain chemistry and prevent natural end points that would otherwise encourage users  
23 to move on to other activities.

1           51. Defendant do not warn users of the addictive design of their product. On the  
2 contrary, Defendants actively try to conceal the dangerous and addictive nature of their products,  
3 lulling users and parents into a false sense of security. This includes consistently playing down  
4 their products' negative effects on teens in public statements and advertising, making false or  
5 materially misleading statements concerning product safety, and refusing to make their research  
6 public or available to academics or lawmakers who have asked for it.

7           52. For example, in or around July 2018, Meta told BBC news that “at no stage does  
8 wanting something to be addictive factor into” its product design process. Similarly, Meta told  
9 U.S. Senators in November of 2020 that “We certainly do not want our products to be addictive.”  
10 Yet, Meta product managers and designers attend and event present at an annual conference held  
11 in Silicon Valley called the Habit Summit, the primary purpose of which is to learn how to make  
12 products more habit forming.

13           53. Defendants engineer their products to keep users, and particularly young users,  
14 engaged longer and coming back for more. This is referred to as “engineered addiction,” and  
15 examples include features like bottomless scrolling, tagging, notifications, and live stories.

16           54. Internal Meta documents identify the potential of reduction in usage by their  
17 minor users as an “existential threat” to their business and spend billions of dollars per year  
18 marketing their products to minors. Defendants have deliberately traded in user harm to protect  
19 the revenue stream their products generate.

20           **E. Defendants Have Designed Complex Algorithms to Addict Teen Users.**

21           55. Defendants have intentionally designed their products to maximize users ‘screen  
22 time, using complex algorithms designed to exploit human psychology and driven by the most  
23

1 advanced computer algorithms and artificial intelligence available to two of the largest  
2 technology companies in the world.

3 56. Defendants designed and have progressively modified their products to promote  
4 problematic and excessive use that they know is indicative of addictive and self-destructive use.

5 57. One of these features—present in both Snapchat and Instagram—is the use of  
6 complex algorithms to select and promote content that is provided to users in an unlimited and  
7 never ending “feed.” Defendants are well-aware that algorithm-controlled feeds promote  
8 unlimited “scrolling”—a type of use those studies have identified as detrimental to users’ mental  
9 health – however, this type of use allows Defendants to display more advertisements and obtain  
10 more revenue from each individual user.

11 58. Defendants have also designed algorithm-controlled feeds to promote content  
12 most likely to increase user engagement, which often means content that Defendants know to be  
13 harmful to their users. This is content that users might otherwise never see but for Defendant’s  
14 affirmative pushing of such content to their accounts.

15 59. The addictive nature of Defendants products and the complex and psychologically  
16 manipulative design of their algorithms is unknown to ordinary users.

17 60. Defendants go to significant lengths to prevent transparency, including posing as  
18 a “free” social media platform, burying advertisements in personalized content, and making  
19 public statements about the safety of their products that simply are not true.

20 61. Defendants also have developed unique product features designed to limit and  
21 have in other ways limited Parents’ ability to monitor and prevent problematic use by their  
22 children.  
23

62. The algorithms that render Defendants social products addictive are designed to be content neutral. They adapt to the social media activity of individual users to promote whatever content will trigger a particular user's interest and maximize their screen time. Defendants' algorithm designs do not distinguish, rank, discriminate or prioritize between particular types of content on their social media platforms. If User One is triggered by elephants and User Two is triggered by moonbeams, Defendants' algorithm design will promote elephant content to User One and moonbeam content to User Two. Defendants' above-described algorithms are solely quantitative devices and make no qualitative distinctions between the nature and type of content they promote to users.

**F. Minor Users' Incomplete Brain Development Renders Them Particularly Susceptible to Manipulative Algorithms with Diminished Capacity to Eschew Self-Destructive Behaviors and Less Resiliency to Overcome Negative Social Media Influences**

63. The human brain is still developing during adolescence in ways consistent with adolescents demonstrated psychosocial immaturity. Specifically, adolescents' brains are not yet fully developed in regions related to risk evaluation, emotional regulation, and impulse control.

64. The frontal lobes - and in particular the prefrontal cortex - of the brain play an essential part in higher-order cognitive functions, impulse control and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature.

65. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin.

1 Second, during childhood and adolescence, the brain is undergoing “pruning” - the paring away  
2 of unused synapses, leading to more efficient neural connections. Through myelination and  
3 pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently,  
4 improving the “executive” functions of the frontal lobes, including impulse control and risk  
5 evaluation. This shift in the brain’s composition continues throughout adolescence and  
6 continues into young adulthood.

7 66. In late adolescence, important aspects of brain maturation remain incomplete,  
8 particularly those involving the brain’s executive functions and the coordinated activity of  
9 regions involved in emotion and cognition. As such, the part of the brain that is critical for  
10 control of impulses and emotions and mature, considered decision-making is still developing  
11 during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of  
12 juveniles.

13 67. The algorithms in Defendants’ social media products exploit minor users  
14 diminished decision-making capacity, impulse control, emotional maturity, and psychological  
15 resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise  
16 of reasonable care should know, that because their minor users’ frontal lobes are not fully  
17 developed, such users are much more likely to sustain serious physical and psychological harm  
18 through their social media use than adult users. Nevertheless, Defendants have failed to design  
19 their products with any protections to account for and ameliorate the psychosocial immaturity of  
20 their minor users.

**G. Defendants Misrepresent the Addictive Design and Effects of their Social Media Products**

68. During the relevant time period, Defendants stated in public comments that their products are not addictive and were not designed to be addictive. Defendants knew or should have known that those statements were untrue.

69. Neither Meta or Snap warned users or their parents of the addictive and mentally harmful effects that the use of their products was known to cause amongst minor users, like Decedent CJ Dawley. On the contrary, Defendants have gone to significant lengths to conceal and/or avoid disclosure as to the true nature of their products.

**H. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted or Created by Third Parties**

70. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, as well as Defendants' own statements and actions, not as the speaker or publisher of third-party content.

71. Defendants also failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. These dangers which are unknown to ordinary consumers, do not arise from third-party content contained on Defendants' social media platform but rather from their algorithms designs that 1) addict minor users to Defendants' products; 2) affirmatively select and promote harmful content to vulnerable users based on their individualized demographic data and social media activity; and 3) put minor users in contact with dangerous adult predators.

72. Defendants' products are addictive on a content neutral basis. For example, Defendants design and operate their algorithms in a manner intended to and that does change

1 behavior and addict users, including through a natural selection process that does not depend on  
2 or require any specific type of third-party content.

3 73. Defendants' product features are designed to be and are addictive and harmful in  
4 themselves, without regard to any content that may exist on Defendants' platform, for example,  
5 Meta's "like" feature and Snapchat's "Snapstreaks" are content neutral.

6 74. Defendants have designed other product features for the purpose of encouraging  
7 and assisting children in evasion of parental oversight, protection, and consent, which features  
8 are wholly unnecessary to the operation of Defendants' products.

9 75. Defendants promote, encourage, and/or otherwise contribute to the development  
10 of harmful content. For example, during an October 2021 Senate Hearing, members of the U.S.  
11 Congress made statements based on tens of thousands of Meta documents provided to them by a  
12 whistleblower, among which were several statements that support Plaintiff's allegations that  
13 Defendants promote, encourage, and/or otherwise contribute to the development of harmful  
14 content,

15 a. Defendants approve of ads that contain harmful content, for example, "designed  
16 to encourage and promote anorexia" and encouraging children to abuse  
17 prescription or illegal drugs, which ads Defendants then target specifically at  
18 children in exchange for payment.

19 b. Defendants utilize private information of their minor users to "precisely target  
20 [them] with content and recommendations, assessing what will provoke a  
21 reaction," including encouragement of "destructive and dangerous behaviors."

22 Again, Defendants specifically select and push this harmful content, for which  
23

1 they are paid, to increase user engagement. “That’s how [defendants] can push  
2 teens into darker and darker places.” (Senator Blumenthal, October 5, 2022).

3 c. Defendants “know[] that [their] amplification algorithms, things like engagement  
4 based ranking ... can lead children from very innocuous topics like healthy  
5 recipes ... all the way from just something innocent like healthy recipes to  
6 anorexia promoting content over a very short period of time.” Defendants have  
7 knowledge that their products and the content they are encouraging and helping to  
8 create is harmful to young users and choose “profits over safety.”

9 76. Defendants have information and knowledge that can determine with reasonably  
10 certainty each user’s age, habits, and other personal information, regardless of what information  
11 the user provides at the time of account setup.

12 77. In short, none of Plaintiff’s claims rely on treating Defendants as the publisher or  
13 speaker of any third party’s words or content. Plaintiff’s claims seek to hold Defendants  
14 accountable for their own allegedly wrongful acts and omissions, not for the speech of others or  
15 for Defendants’ good faith attempts to restrict access to objectionable content.

16 78. Plaintiff is not alleging that Defendants are liable for what the third parties said,  
17 but for what Defendants did or did not do.

18 79. None of Plaintiff’s Claims for Relief set forth herein treat Defendants as a speaker  
19 or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable  
20 for their own speech and their own silence in failing to warn of foreseeable dangers arising from  
21 anticipate use of their products. Defendants could manifestly fulfill their legal duty to design  
22 reasonably safe social products and furnish adequate warnings of foreseeable dangers arising out  
23

1 of the use of their products without altering, deleting or modifying the content of a *single* third-  
2 party post or communication.

3 **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

4 80. Christopher James (“CJ”) Dawley was born on Feb. 13, 1997, in Burlington,  
5 Wisconsin. CJ was a senior at Central High School in Paddock Lake. CJ worked as a busboy at  
6 Texas Roadhouse in Kenosha. He was enrolled in Advanced Placement and Honors courses and  
7 was admitted to college in December 2014.

8 81. CJ was a member of St. Alphonsus Catholic Church in New Munster. He was  
9 active at Central High School and loved golfing, volleyball, woods and metal class and was  
10 enrolled in Advanced Placement and Honors Classes. He formerly played baseball with the  
11 Lakeland Little League and played quarterback for the Bulldogs Football team. His greatest  
12 loves were his car, his tractor and fixing and taking things apart. He enjoyed boating, ATV  
13 riding, snowmobiling, tubing, camping and the outdoors.

14 82. In approximately 2012, CJ acquired Facebook, Instagram and Snapchat social  
15 media products. Because he was a minor at the time, CJ lacked contractual capacity to bind  
16 himself and his Estate to the terms of any User Agreements he may have clicked when signing  
17 up for Defendants’ social media products. Neither CJ nor his Estate is therefore subject to any  
18 arbitration, forum selection, choice of law or class action waiver set forth in said User  
19 Agreements

20 83. After he acquired Defendants’ social media products, CJ spent progressively more  
21 time communicating on social media through his smart phone and laptop computer. By 2014, CJ  
22 had developed an addiction to Defendants’ social media products, never left his smart phone, and  
23 everything he did was absorbed on his phone. Through Facebook, Snapchat, and Instagram, he

1 began exchanging explicit photographs with other users. CJ became obsessed with his body  
2 image and would communicate through social media at all hours of the night resulting in sleep  
3 deprivation. He would frequently be communicating on Instagram at 3am.

4 84. CJ never showed outward signs of depression or mental injury but became  
5 addicted to Defendants' social media products, progressively sleep deprived, and increasingly  
6 obsessed with his body image.

7 85. On January 4, 2015, while his family was cleaning Christmas decorations and  
8 dismantling their Christmas tree, CJ retreated into his room. He sent a text message to his best  
9 friend "God's speed" and posted the message "Who turned out the light?" on his Facebook page.  
10 CJ held a 22-caliber rifle in one hand, his smart phone in the other, and shot himself to death.  
11 Nobody heard the shot and his parents assumed that CJ was sleeping. Five hours later, CJ's  
12 sister discovered his body still clutching his smart phone.

13 86. CJ hand wrote the following message to his family on the envelope which  
14 contained his college acceptance letter:

15 I don't want you to think this is at all your fault. It's not. I'm f\*\*\*\*d up. You  
16 showed me love and family. I wish I didn't have to do this to you guys. I love  
17 you all more than the world. It's hard to be a person right now. And I wish I  
18 believed in God. If God does exist, he will have to beg for my forgiveness. There  
19 are a lot of things you don't know about me. What goes on inside my head scares  
me. I tried to be a good person. It's just as I am yelling in a dark tunnel running  
after the light so I can be happy. But my legs are tired and what's a man to do  
when the lights go out. Tell my friends thank you for the friendship and support  
and I love them with all my being. I tried.

20 87. CJ's death by suicide was the proximate result of the unreasonably dangerous  
21 Instagram, Snapchat, and Facebook products he used. As set forth in detail below, these  
22 products were not reasonably safe due to their defective design and inadequate warnings.  
23

1           88. At the time of CJ’s death and to this day, Defendants have actively concealed the  
2 fact and have “sought to stonewall and block this information [information about the  
3 dangerousness of their products, especially to young users] from becoming public.” (Senator  
4 Blumenthal, October 5, 2022). Defendants “intentionally” hid vital information in their  
5 possession from the public, the US government, and governments, including information relating  
6 to the safety of children and the role of their algorithms in causing addiction and others harms.

7           89. Defendants made false statements to the press and public, designed to cover up  
8 the inherent dangers of their products and, even when asked direct questions as to how those  
9 products “impact the health and safety of our children, they choose to mislead and misdirect.”

10           90. Plaintiff did not discover, or in the exercise of reasonable diligence could not have  
11 discovered, that CJ’s death by suicide was caused by the Defendant’s unreasonably dangerous  
12 products until September or October of 2021.

13           **V. PLAINTIFFS’ CLAIMS**

14           **COUNT I - STRICT PRODUCT LIABILITY (Design Defect)**

15           91. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 90  
16 as if fully stated herein.

17           92. Defendant Meta’s product is defective because the foreseeable risks of harm  
18 posed by the product’s design could have been reduced or avoided by the adoption of a  
19 reasonable alternative design by Meta and the omission of the alternative design renders the  
20 product not reasonably safe. This defective condition rendered the product unreasonably  
21 dangerous to persons or property and existed at the time the product left the Meta’s control,  
22 reached the user or consumer without substantial change in the condition and its defective  
23 condition was a cause of CJ Dawley’s injury

93. Defendant Snap's product is defective because the foreseeable risks of harm posed by the product's design could have been reduced or avoided by the adoption of a reasonable alternative design by Snap and the omission of the alternative design renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property and existed at the time the product left the Snap's control, reached the user or consumer without substantial change in the condition and its defective condition was a cause of CJ Dawley's injury.

94. Defendants designed, manufactured, marketed, and sold social media products that were unreasonably dangerous because they were designed to be addictive to the minor users to whom Defendants actively marketed and because the foreseeable use of Defendants' products causes mental and physical harm to minor users.

95. Defendants' products were unreasonably dangerous because they contained numerous design characteristics that are not necessary for the utility provided to the user but are unreasonably dangerous and implemented by Defendants solely to increase the profits they derived from each additional user and the length of time they could keep each user dependent on their product.

**A. Inadequate Safeguards From Harmful and Exploitative Content**

96. As designed, Snapchat, Instagram and Facebook algorithms are not reasonably safe because they affirmatively direct minor users to harmful and exploitative content while failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It is feasible to design an algorithm that substantially distinguishes between harmful and innocuous content and protects minor users from being exposed to harmful content without altering, modifying, or deleting any third-party content posted on Defendants' social media products. The

1 cost of designing Defendants' algorithms to incorporate this safeguard would be negligible while  
2 benefit would be high in terms of reducing the quantum of mental and physical harm sustained  
3 by minor users and their families.

4 97. Snap and Meta also engage in conduct, outside of the algorithms themselves,  
5 which is designed to promote harmful and exploitative content as a means of increasing their  
6 revenue from advertisements. This includes but is not limited to efforts to encourage advertisers  
7 to design ads that appeal to minors, including children under the age of 13; and product design  
8 features intended to attract and engage minor users to these virtual spaces where harmful ad  
9 content is then pushed to those users in a manner intended to increase user engagement, thereby  
10 increasing revenue to Defendants at the direct cost of user wellbeing.

11 98. Reasonable users (and their parents) would not expect that Defendants' would  
12 knowingly expose them to such harmful content and/or that Defendants' products would direct  
13 them to harmful content at all, much less in the manipulative and coercive manner that they do.  
14 Defendants have and continue to knowingly use their algorithms on users in a manner designed  
15 to affirmatively change their behavior, which methods are particularly effective on (and harmful  
16 to) Defendants' youngest users, like CJ Dawley.

17 **B. Failure to Verify Minor Users' Age and Identity**

18 99. As designed, Defendants' products are not reasonably safe because they do not  
19 provide for adequate age verification by requiring users to document and verify their age and  
20 identity.

21 100. Adults frequently set up user accounts on Defendants' social media products  
22 posing as minors to groom unsuspecting minors to exchange sexually explicit content and  
23 images, which frequently progresses to sexual exploitation and trafficking.

1           101. Minor users of social media and their parents do not reasonably expect that  
2 prurient adults set up fraudulent accounts on Defendants' social media products and pose as  
3 minors for malign purposes.

4           102. Likewise, minor users who are under the age of 13 and/or whose parents have  
5 taken affirmative steps to keep them away from Defendants' products often open multiple  
6 accounts, such that Defendants know or have reason to know that the user is underage and/or  
7 does not have parental permission to use their product. Defendants already have the information  
8 and means they need to ascertain with reasonable certainty each user's actual age and, at least in  
9 some cases, Defendants utilize these tools to investigate, assess, and report on percentages and  
10 totals of underage users for internal assessment purposes. They simply then choose to do nothing  
11 about that information as it relates to the specific, underaged users themselves.

12           103. Moreover, reasonably accurate age and identity verification is not only feasible  
13 but widely deployed by on-line retailers and internet service providers.

14           104. The cost of incorporating age and identify verification into Defendants' products  
15 would be negligible whereas the benefit of age and identity verification would be a substantial  
16 reduction in severe mental health harms, sexual exploitation, and abuse among minor users of  
17 Defendants' products.

18 **C. Inadequate Parental Control and Monitoring**

19           105. Defendants' products are also defective for lack of parental controls, permission,  
20 and monitoring capability available on many other devices and applications.

21           106. Defendants' products are designed with specific product features intended to  
22 prevent and/or interfere with parents' reasonable and lawful exercise of parental control,  
23 permission, and monitoring capability available on many other devices and applications.

**D. Intentional Direction of Minor Users to Harmful and Exploitative Content**

107. Default “recommendations” communicated to new teenage users, including Plaintiff, purposefully steered Plaintiff toward content Defendants knew to be harmful to children of his age and gender.

108. Ad content pushed to new teenage users, including CJ Dawley, because of their age and vulnerability, purposefully steer those users toward content Defendants know to be harmful to children of their age and gender.

**E. Inadequate Protection of Minors from Sexual Exploitation and Abuse**

109. Defendants’ products are not reasonably safe because they do not protect minor users from sexually explicit content and images or report sex offenders to law enforcement or allow users’ parents to readily report abusive users to law enforcement.

110. Parents do not expect their children will use Defendants’ products to exchange sexually explicit content and images and minor users do not expect that prurient adults pose as minors for malign purposes or that exchange of such content will be deleterious to their personal safety and emotional health.

111. Minor users of Defendants’ products lack the cognitive ability and life experience to identify on-line grooming behaviors by prurient adults and psychosocial maturity to decline invitations to exchange salacious material.

112. Defendants’ products are unreasonably dangerous and defective as designed because they allow minor children to use “public” profiles, in many cases default “public” profiles, that can be mass messaged by anonymous and semi-anonymous adult users for the purposes of sexual exploitation, and grooming, including the sending of encrypted, disappearing messages and cash rewards through Defendants’ integrated design features.

**F. Design of Addictive Social Media Products**

113. As designed, Defendants' social media products are addictive to minor users as follows: When minors use design features such as "likes" it cause their brains release dopamine which creates short term euphoria. However, as soon as dopamine is released, minor users' brains adapt by reducing or "downregulating" the number of dopamine receptors that are stimulated and their euphoria is countered by dejection. In normal stimulatory environments, this dejection abates, and neutrality is restored. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria. As this pattern continues over a period of months and the neurological base line to trigger minor users' dopamine responses increases, they continue to use Instagram, not for enjoyment, but simply to feel normal. Once they stop using Instagram, minor users experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

114. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder as described in the American Psychiatric Association's 2013 *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*, which is used by mental health professionals to diagnose mental disorders. Gaming addiction is a recognized mental health disorder by the World Health Organization and International Classification of Diseases and is functionally and psychologically equivalent to social media addition.

115. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardized school or work performance or relationships due to social media usage.

116. Defendants' advertising profits are directly tied to the amount of time that its users spend online, and their algorithms and other product features are designed to maximize the time users spend using the product by directing them to content that is progressively more and more stimulative. Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform. However, reasonable minor users and their parents do not expect that on-line social media platforms are psychologically and neurologically addictive.

117. It is feasible to make Defendants' products less addictive to minor users by limiting the frequency and duration of access and suspending service during sleeping hours.

1 Designing software that limits the frequency and duration of minor users' screen use and  
2 suspends service during sleeping hours could be accomplished at negligible cost; whereas the  
3 benefit of minor users maintaining healthy sleep patterns would be a significant reduction in  
4 depression, attempted and completed suicide and other forms self-harm among this vulnerable  
5 age cohort.

6 **G. Inadequate Notification of Parents of Dangerous and Problematic Social Media**  
7 **Usage by Minor Users**

8 118. Defendants' products are not reasonably safe as designed because they do not  
9 include any safeguards to notify users and their parents of usage that Defendants know to be  
10 problematic and likely to cause negative mental health effects to users, including excessive  
11 passive use and use disruptive of normal sleep patterns. This design is defective and  
12 unreasonable because:

13 119. It is reasonable for parents to expect that social media products that actively  
14 promote their platforms to minors will undertake reasonable efforts to notify parents when their  
15 child's use becomes excessive or occurs during sleep time. It is feasible for Defendants to  
16 design products that identify a significant percentage of its minor users who are using the  
17 product more than three hours per day or using it during sleeping hours at negligible cost.

18 120. Defendants' products are not reasonably safe as designed because, despite  
19 numerous reported instances of child sexual solicitation and exploitation by adult users,  
20 Defendants have not undertaken reasonable design changes to protect underage users from this  
21 abuse, including notifying parents of underage users when they have been messaged or solicited  
22 by an adult user or when a user has sent inappropriate content to minor users. Defendants' entire  
23 business is premised upon collecting and analyzing user data and it is feasible to use Defendants'

1 data and algorithms to identify and restrict improper sexual solicitation, exploitation and abuse  
2 by adult users; and

3 121. It is reasonable for parents to expect that platforms such as Instagram, which  
4 actively promote their services to minors, will undertake reasonable efforts to identify users  
5 suffering from mental injury, self-harm, or sexual abuse and implement technological safeguards  
6 to notify parents by text, email, or other reasonable means that their child is in danger.

7 122. As a proximate result of these dangerous and defective design attributes of  
8 Defendants' products, Decedent CJ Dawley suffered severe mental harm leading to his suicide  
9 on January 4, 2015. Plaintiff did not know, and in the exercise of reasonable diligence could not  
10 have known, of these defective design in Defendants' products until 2021.

11 123. As a result of these dangerous and defective design attributes of Defendants'  
12 products, Plaintiff DONNA DAWLEY, her husband and their surviving children have suffered  
13 loss of consortium, emotional distress, pain and suffering.

14 124. Defendants are further liable to Plaintiffs for punitive damages based upon the  
15 willful and wanton design of their products that were intentionally marketed and sold to  
16 underage users, whom they knew would be seriously harmed through their use of Instagram,  
17 Snapchat, and Facebook.

18 **COUNT II – STRICT PRODUCT LIABILITY (Failure to Warn)**

19 125. Plaintiffs reallege each and every allegation contained in paragraphs 1 through  
20 124 as if fully stated herein.

21 126. Meta's product is defective because of inadequate instructions or warnings  
22 because the foreseeable risks of harm posed by the product could have been reduced or avoided  
23 by the provision of reasonable instructions or warnings by the manufacturer and the omission of

1 the instructions or warnings renders the product not reasonably safe. This defective condition  
2 rendered the product unreasonably dangerous to persons or property, existed at the time the  
3 product left defendant's control, reached the user or consumer without substantial change in the  
4 condition in which it was sold and was a cause of CJ Dawley's injury.

5 127. Snap's product is defective because of inadequate instructions or warnings  
6 because the foreseeable risks of harm posed by the product could have been reduced or avoided  
7 by the provision of reasonable instructions or warnings by the manufacturer and the omission of  
8 the instructions or warnings renders the product not reasonably safe. This defective condition  
9 rendered the product unreasonably dangerous to persons or property, existed at the time the  
10 product left defendant's control, reached the user or consumer without substantial change in the  
11 condition in which it was sold and was a cause of CJ Dawley's injury.

12 128. Defendants' products are unreasonably dangerous and defective because they  
13 contain no warning to users or parents regarding the addictive design and effects of Snapchat,  
14 Instagram and Facebook.

15 129. Defendants' social media products rely on highly complex and proprietary  
16 algorithms that are both undisclosed and unfathomable to ordinary consumers who do not expect  
17 that social media platforms are physically and/or psychologically addictive.

18 130. The magnitude of harm from addiction to Defendants' products is horrific ranging  
19 from simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe  
20 depression, anxiety, self-harm, and suicide.

21 131. The harms resulting from minors' addictive use of social media platforms have  
22 been not only well- documented in the professional and scientific literature, but Meta had actual  
23 knowledge of such harms. On information and belief, Snap also has conducted internal studies

1 documenting the addictive quality and harmful effects of its social media products on minor  
2 users.

3 132. Defendants' products are unreasonably dangerous because they lack any warnings  
4 that foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents  
5 when their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive  
6 screen time is harmful adolescents' mental health and sleep patterns and emotional well-being.  
7 Reasonable and responsible parents are not able to accurately monitor their child's screen time  
8 because most adolescents own or can obtain access to mobile devices and engage in social media  
9 use outside their parents' presence.

10 133. It is feasible for Defendants' products to report the frequency and duration of their  
11 minor users' screen time to their parents without disclosing the content of communications at  
12 negligible cost, whereas parents' ability to track the frequency, time and duration of their minor  
13 child's social media use are better situated to identify and address problems arising from such  
14 use and to better exercise their rights and responsibilities as parents.

15 134. Defendants knew about these harms, knew that users and parents would not be  
16 able to safely use their products without warnings, and failed to provide warnings that were  
17 adequate to make the products reasonably safe during ordinary and foreseeable use by children.

18 135. As a result of Defendants' failure to warn, Decedent CJ Dawley suffered severe  
19 mental harm, leading to physical injury and death, from his use of Snapchat, Instagram and  
20 Facebook.

21 136. As a result of Defendants' failure to warn, Plaintiff DONNA DAWLEY, her  
22 husband and their surviving children suffered loss of consortium, emotional distress, past and  
23 future medical expenses, and pain and suffering.

1           137. Defendants are further liable to Plaintiffs for punitive damages based upon their  
2 willful and wanton failure to warn of known dangers of their products that were intentionally  
3 marketed and sold to teenage users, whom they knew would be seriously harmed through their  
4 use of Instagram and Facebook.

5 **COUNT III – NEGLIGENCE**

6           138. Plaintiffs reallege each and every allegation contained in paragraphs 1 through  
7 137 as if fully stated herein.

8           139. At all relevant times, Defendants had a duty to exercise reasonable care and  
9 caution for the safety of individuals using their products, such as Decedent CJ Dawley.

10           140. Defendants owe a heightened duty of care to minor users of their social media  
11 products because adolescents' brains are not fully developed, which results in a diminished  
12 capacity to make good decisions regarding their social media usages, eschew self-destructive  
13 behaviors, and overcome emotional and psychological harm from negative and destructive social  
14 media encounters.

15           141. As product manufacturers marketing and selling products to residents of  
16 Wisconsin, Defendants owed a duty to exercise ordinary care in the manufacture, marketing, and  
17 sale of their products, including a duty to warn minor users and their parents of hazards that  
18 Defendants knew to be present, but not obvious, to underage users and their parents.

19           142. As business owners, Defendants owe their users who visit Defendants' social  
20 media platform and from whom Defendants derive billions of dollars per year in advertising  
21 revenue a duty of ordinary care substantially similar to that owed by physical business owners to  
22 their business invitees.  
23

1           143. Defendants were negligent, grossly negligent, reckless and/or careless in that they  
2 failed to exercise ordinary care and caution for the safety of underage users, like CJ Dawley  
3 using their Snapchat Instagram and Facebook products.

4           144. Defendants were negligent in failing to conduct adequate testing and failing to  
5 allow independent academic researchers to adequately study the effects of their products and  
6 levels of problematic use amongst teenage users. Defendants' have extensive internal research  
7 indicating that their products are harmful, cause extensive mental harm and that minor users are  
8 engaging in problematic and addictive use that their parents are helpless to monitor and prevent.

9           145. Defendants were negligent in failing to provide adequate warnings about the  
10 dangers associated with the use of social media products and in failing to advise users and their  
11 parents about how and when to safely use their social media platforms and features.

12           146. Defendants were negligent in failing to fully assess, investigate, and restrict the  
13 use of Snapchat, Instagram and Facebook by adults to sexually solicit, abuse, manipulate, and  
14 exploit minor users of their Instagram and Facebook products.

15           147. Defendants were negligent in failing to provide users and parents the tools to  
16 ensure their social media products were used in a limited and safe manner by underage users.

17           148. As a result of Defendants' negligence, Decedent CJ Dawley suffered severe  
18 mental harm, leading to death by suicide from his use of Snapchat, Instagram and Facebook.

19           149. As a result of Defendants' negligence, Plaintiff DONNA DAWLEY, her husband  
20 and surviving children have suffered loss of consortium, emotional distress, pain and suffering.

21           150. Defendants are further liable to Plaintiffs for punitive damages based upon their  
22 willful and wanton conduct toward underage users, including CJ Dawley, whom they knew  
23 would be seriously harmed through the use of their social media products.

1 **COUNT IV DECEPTIVE TRADE PRACTICE WIS. STAT § 100.18**

2 151. Paragraphs 1 through 150 are restated in their entirety.

3 152. Meta actively represents to the public that its social media products are not  
4 addictive and safe for use by minors with the intent to induce use of their products by minors.  
5 This representation is untrue, deceptive, or misleading and caused the plaintiff a pecuniary loss.

6 153. Snap actively represents to the public that its social media products are not  
7 addictive and safe for use by minors with the intent to induce use of their products by minors.  
8 This representation was untrue, deceptive, or misleading and caused the plaintiff a pecuniary  
9 loss.

10 **DEMAND FOR JURY TRIAL**

11 Plaintiff hereby demands a trial by jury.

12 **PRAYER FOR RELIEF**

13 WHEREFORE, Plaintiff prays for judgment against Defendant for monetary damages for  
14 the following harm:

- 15 1. Past physical and mental pain and suffering of CJ Dawley, in an amount to be more  
16 readily ascertained at the time and place set for trial.
- 17 2. Loss of consortium on behalf of CJ Dawley's statutory beneficiaries.
- 18 3. Plaintiffs' pecuniary loss and loss of Christopher Dawley's services, comfort, care,  
19 society and companionship.
- 20 4. Loss of future income and earning capacity of CJ Dawley.
- 21 5. Punitive damages.
- 22 6. For the reasonable costs and attorney and expert/consultant fees incurred in  
23 prosecuting this action; and
